I was looking in a back issue of Current Notes and I found an ad for
astronomy software, So I'm looking for 'Star Base' v1,2 AND also
BIG SKY. If anyone has them I'id like to get them as I'm an Am.Astronomer.
I have 3 Atari systems, 4meg ST, 8meg TT, 4meg Falcon.

The problem is in Newsie. MUNPACK.TTP only decodes, Newsie does the
encoding, itself.

Ordering from the UK hasn't been too much of a problem for me. The best thing to do is use Canada Post Money Orders. The exchange rate is the hard part to take. Then there's any duties and the GST to pay when it arrives.

I'm not too sure what one, or where, but Chris from Computer Direct is going to be in the UK at a couple of 'Atari' shows in November - so he is still trying to keep on, keepin' on - but it is tough sledding what with the bad mouthing and piracy going on these days.

Seems to me it would be better if all the 'Atari folks' would be of support to each other - rather than trying to destroy what is left of the platform.

> you get a debug.log or is it created only on failed connections?

No. SLIP does not do any negotiation part, so there is no need to log anything.
Only PPP connections will create logs.

> A few more oddities. STinG/slip will work fine even with the default.cfg
> from the wrong ISP! Nameserver, domain, etc. isn't needed in the file?

It is. But usually you can very well work with other ISP's name server, it's
just that performance is a little bit worse. You can try with 130.75.1.32
which is my ISP's name server, but don't be puzzled by poor performance ;-)

> 1) Is a debug.log created with good ppp connections (DEBUGGING=TRUE)?

Yes, it is. Every PPP connection attempt (success or failure) results in
a debug.log if the debug flag is on.

> 2) Does anyone in North America have STinG/ppp working with a dynamic IP?

I hope lots have ! So is over here at least.

> 3) What parameters of the default.cfg file are "really" neccessary?

What do you mean by "necessary" ? They're all necessary to get optimal
connections. Some you can leave blank however and they will default to
sensible values.

> 6) STinG still doesn't work with MultiTOS/MiNT on my Falcon.

MultiTOS is not a sensible thing to be used. It's an unfinished AES that has
lots of bugs. We just had this discussion in the developers mailing list,
once again with the same result that the use of MultiTOS is not recommended,
whatever anybody does with it. STinG does work with it, but the setup is not
stable, and cannot be stable since MultiTOS itself is not stable.

You will find much better (stable) performance if you install XaAES or
similar AES, even better probably Geneva or NAES. IMHO the best setup
is with MagiC, but many people do not agree here for various reasons,
this is largely dependent on the viewpoint.

Cheers Peter

>of another resolution editor available, please let me know! Thanks!

Videl Inside has an English documentation.
The latest version is 2.04.
You can download it on ftp.lip6.fr/pub6/Falcon/Graphics.
If you have some problems to download it, tell me : I will send it
to you by e-mail.
By the way, there is no web page for the moment to have Videl Inside.
I can also help you if you guess to configure it.
Bye Mike

I have the same problem, WenSuite logs on OK but as soon as it starts PPP
my ISP hangs up. Version 1.70k works fine.

Mmm, tasty! Wish I had a multisynch.

You should find what you want on Hallvard's site. He has loads of FAQs
about connecting monitors.

With the multisynch. the secret is to have a switch in the "Mono
Detect" line to tell the ST when to do mono.

Hi Mario !

Well, not so easy, you must absolutely run the upper command under
Mint and when it's done you only have the Minix partition, not the
system !

The exact command is: -V -n 2 -P X:
^
^
it's the drive you need to make Minix

Thanks Eric, I have it now. Following WENSUITE is a really frustrating
business. I was able to make PPP connection with 1.70k, now I can't
with 2.25!! Also, 1.70 was able to display the doc.htm - 2.25 gives me
a system error at which I have to re-boot. Normally beta versions
progress - these things seem to regress.

> dialer is:
> 198.231.68.0 255.255.255.0 modem 2 -----------
> is this normal behavior? what I should expect?

This ! Because it's just what you told it. You've told it to put a route
to the network with the address 198.231.68.0 (netmask 255.255.255.0) via
Modem 2. You specified a (not needed) gateway.

I somehow doubt that this is what you wanted ! Mind you, the machine does,
what you tell it, not what you had in mind.

> and Mega ST to Modem 1.

Sounds sensible, and should definitely work. You should use SLIP for this,
STinG's PPP seems not ready yet to get connected to. I suspect you tried
PPP. If data gets sent, then the routing table is alright on the sending
side. You're saying the pinged host does not respond. That can be due to
IP addresses messed up, or a faulty routing table, or STinG not activated
on the pinged host.

You should post more information here. Post your routing table, which IP
addresses you've assigned to which ports, and the settings of the ports.
As you got data being sent, I suppose you got HSMODEM's MIDI.PRG installed ?

You're saying you want a star shaped network. This means the points all have
similar setups. Their routing tables is just one line, saying
0.0.0.0 0.0.0.0 <port-to-be-used> 0.0.0.0
Fill in the port you use, which will be different for each of the points of
the star. Give each one a unique IP address, say 192.168.1.x with x starting
from 1 and counting up. Say the Stacy is 192.168.1.1. The Stacy's routing
table is then
0.0.0.0 0.0.0.0 Midi 0.0.0.0
and it's 'Port Setup' CPX settings are the IP address 192.168.1.1. I suggest
to use an MTU of 576 everywhere. Make sure SLIP and no compression are selected
on the 'General' page, and click ok. Now the points are ready to go.

The node in the middle of the star is a bit more complex to configure. It
needs a routing table with a line for each of the points of the star. The line
for the Stacy would be
192.168.1.1 255.255.255.255 Midi 0.0.0.0

which means packets bound for address 192.168.1.1 are to be sent via Midi. Add another line for each point, by using the point's IP address for the first part of the entry, and the correspondent port as the third part. Now the routing table is alright, and the ports need to be configured. You can give each of the ports on that machine the same IP address, say 192.168.1.8, since point to point lines are not involved in subnetting. MTU and the 'General' settings for each port of course must match the settings of the corresponding host at the other end. Now if you configured the speeds etc of the serial ports correctly your network is ready to be used. Ping should confirm it.

: >programs made for formatting, partitioning, optimizing, etc. Minix partitions.

You cannot have all Minix partitions, because you need a standard GEM or
BGM partition to boot from in order to load the Minix filesystem driver.
Therefore the best option might be to have one GEM or BGM partition (the
first partition) and all the rest Minix.

The only other reason for not have all Minix partitions is if you need to
use the computer without the Minix filesystem driver loaded. I guess if
you play improperly implemented games or something that has problems with
the Minix filesystem you may still want a GEM or BGM partition.

: > Why is that if Minix is highly suggested compared to GEM or BGM partitions?
: >On one hand we are incouraged to switch to the Minix format, but it isn't made
: >more approachable for the MultiTOS generation.

Well, I'm sure it's not that difficult to make a Minix filesystem. All you
need to do is run minit with a simple commandline:

minit -P -V -n 2 X:

where X is the drive you wish to create the filesystem on. This will
create a typical Minix filesystem. Then all you have to do is use it.

Frank,
If you pop the end of that little square plastic box where the leads come out you will find that the actual battery is a AA size lithium battery with the leads soldered on. It is indeed 3.6 volt. You should be able to find this battery at a good battery supply store. I got one here in Calgary a couple of months ago at the store that took over from Battery World, just off Barlow Trail NE. They even soldered on the leads for me.

1775. ST+/N.A.G. MEET!

Newsgroup: comp.sys.atari.st
Date: 1997-11-02 00:00:00 UTC
From: All@Sea
Message-ID: <762_All@Sea>
Source record: 114258

THE NEXT N.A.G. MEET WILL BE TAKING PLACE ON
14th through to the 16th November.

N.A.G. [The Northants Atari Group] is a general gathering of like
minded Atari users, there are no hard and fast rules on what to do
save for having a good time.

43 SPENFIELD COURT
LINGS
NORTHAMPTON
NN3 8LZ
ENGLAND

Some of the things we'll be up to are:

DEATHMATCH DOOM (JAG LINK)

CODERS CORNER.

DEMO SHOWINGS

ST LINK GAMES (F16, LOTUS, VROOM ect.)

REAL TIME ARTICLE.

VISITATIONS TO THE LOCAL PUB

I'm also open to suggestions as to what else we can get up to :)))

There is NO ENTRY FEE, NO MEMBERSHIP FEE, all you need to do is turn
up on the day(s) AND HAVE SOME FUN!! ;)))

IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT :

IF YOU READ NOTHING ELSE READ THIS!!!

IF you want to eat 'in' then a small 3 pound payment to the food
cupboard fund will be expected, otherwise, there's a chippy and
McDonalds no more than 5-15 mins respectively walk from my house.

IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT : IMPORTANT :

DOSSERS READ ON: Sleeping arrangements.

Sleeping arrangements are, as per any show really, bring a sleeping bag/blanket ect. and sleep where you can, I've a three seater settee and 2 chairs, one single bed and one double bed (but THAT'S mine and Mandy's an' I ain't sharin ;))....the floor has NOT yet been reserved hehe...but, there's a good chance most, if not all of us will be awake through the night, the coffee will be on ready standby ;))

THE END BIT: All done...

I'm not promising this'll be the ultimate in Atari meetings, it was never intended to be so however, I think with a house full of Atari machines and a bunch of Atari users we can at least have a great time...

Any queries will be answered, call me, Dave Hollis for more information on:

+44-01604-416951

...or netmail me on 100:1011/142

Look forward to meeting you...

Dave...

There IS an English doc and English RSCs too, at least in v2.04.
The link in UTSI seems to be no longer valid (Jo ?) but it should be
available on ftp.lip6.fr/pub/atari. If you still can't get it I can email it
to you.

Bye Nicole,

Hi !

I am having very little luck with wensuite (which otherwise looks very promising),
as when it is trying to initialize the modem I get "error". (I typep ATZ)

has anyone an answer ?

Thanks,

Steph

1778. Connecting a NEC Multisync II to a STE

Newsgroup: comp.sys.atari.st
Date: 1997-11-02 00:00:00 UTC
From: Magnus Thylander <thylboy@hem1.passagen.se>
Message-ID: <345C7440.6ACF3C28@hem1.passagen.se>
Source record: 114261

Hi all!

A friend of mine has just bought a STE and got an old NEC Multisync II monitor with it. What I m wondering is what is the pin configuration of this old beasts 9 pin connector and how do I make it possible to switch between all three resolutions (low, med & high)? Surely there must be plenty of info on this subject since I think NEC2+ST was(is?) a quite common configuration....

Please answer as soon as possible.

Greetings from Magnus Thylander

If everyone were to have a large sig then it would add a significant chunk to
the phone bill. I personaly dont think its very appealing, and that it
probably made its impact ages ago, so bury it.

Source record: 114265

FROM: SSweet@fortress.org.uk
SUBJ: What is a Wincap File for Hard Disk?

w> I next tried the Atari hard disk utilities. I get a message that this
w> drive is not supported but I should ask Atari for a Wincap file that
w> may allow the drive to be used.

w> What is a Wincap file and where can they be found?

The WINCAP file is an ascii file that contains personal details of the drive,
such as sectors per track, no of cylinders, number of heads. A wincap file
should be in the ahdi package, just asciii edit it so that it contains
details of your drive.

I'm suprised ICD didn't suss it, the drive should provide its own format
parameters, i recomend that you try HD-Driver, i'm sure the authour will be
along in a few moments with the answers to your problems.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

I had that with one particular CD, Extendos would allow me to read it.

> Does it sound like my configuration is wrong, or are these disk

There is an English documentation with Videl Inside.
The latest version is 2.04.
You can download it on : ftp.lip6.fr/pub6/Falcon/Graphics.
If you have problems, I would be able to send you the last version
by e-mail, if you wish.
I can also help you to configure it. By the way, it's really simple :-)

> Any ideas as to what is going wrong?

You've probably already thought of this, but...I had this problem at times...eventually figured out that it happened when I had chosen a specific newsgroup folder as the path for downloads and didn't have munpack.ttp or uud.ttp in that folder too. NEWSie doesn't go looking for those programs in the NEWSie root directory if you've got a different path set. I've not used 0.82 yet, only through 0.80 so far.

Yes, thanks. This site was going OK today.

How do you find WENSUITE?

I got 1.70k working OK and was expecting progress with 2,25. Instead I
find it will not display its own doc.htm nor will it connect.

> be sold as a standalone program. I will probably never use it, so why should
> I pay for it?

I'm pretty sure it is not sold this way, because they reckon it won't sell as well as when bundled with CAB. They are probably right, but the point is they're pissing people off that way, and by promoting another proprietary TCP/IP stack that strongly they're splitting off another fraction from the Internet client programmers community, wasting lots of programming efforts once again to re-create all the clients for another API. IMHO they do a lot of damage to the Atari market this way.

I'm wondering if they should see a little more competition on the CAB front, it might be a good remedy here ? Apparently Wensuite improved quite a lot with the last few releases (I still need to check it out myself), maybe the programmers would feel like porting their Internet access plug-in to STinG, which would boost their sales I'm convinced and gives the STiK / STinG using people a second browser to choose.

Alexander does a great job even without competition, but competition is not only aimed at improving quality of the product, but also quality of the marketing, and it's the latter which is definitely at lack here. ASH are abusing their monopolist status (for certain kinds of software), just very similar to what Microsoft does. Competition might remind them that it's worth to keep the customer satisfied.

> Necscape Communicator. Now that's laughable!

And it's bit more than unfair what you're saying here. You're complaining
about a bug in CAB V2.0, fair enough. But for one, many people do not go
to CGI based sites very often, so for them CAB might well be just as good as
Netscape Communicator. Then you're announcing that a program is generally
useless because of a bug, that you've checked to exist in an outdated version.
Now that's laughable, isn't it.

First you should check if the bug is still there in V2.5. If it is, then you
may say it's useless for you right now. But a general statement calling CAB
useless for everybody for all future (which your statement implicitly implied)
is ridiculous.

This is normal. The NAK/ACK is the dialog using which the implementations
negotiate the local (dynamic) IP address.

> Tue Oct 28 17:10:34 1997 : Modem connects to 397-8400

> Total time 2 min 2 sec, problem reading fee file !
> IP traffic 1 Kb sent, 1 Kb received. <-- virtually no data

Check out the Dialer's Statistics tool, which gives better information than
the DIAL.LOG, the latter is of little use for debugging (it's just for the
user to keep track of his connection times and traffic).

When you try ping, the info of interest are the numbers in the (bigger) first
part of the Statistics window, and the figures in the second part when your
modem port or the "Internal" port are selected there. Gimme all three sets of
numbers after you tried to perform a ping.

There really seem to be a few really stubborn ISP's out there ;-) I've no
idea right now what gives you that trouble, as the logs you've sent all look
fine.

What you can do is ask your ISP if you got a proper connection. If they got
competent people sitting there, it should be quite easy for them to monitor
on their side what your connection is doing. Thus, while you attempt to ping,
they should be able to pin-point the problem, which would be an immense help
for me to fix it.

Are these really isolated servers (or IRC networks) ? That's ridiculous
IMHO, as the whole idea of IRC is connecting the whole world's IRC servers
to a big chatting network. But maybe I'm overoptimistic here, I don't know
very well what goes on with IRC in the US.

Well, the (mostly) common consensus is that "big" .SIGs are out. Its running about 50/50 in the news msgs/E-mails that I have received about this thread. Therefore, out of common courtesy I'm shortening my .SIG to 8 lines. I do knot that this is still a little bit larger than what is recommended. I hope that everyone can live with this. I personally have no problems with large .SIG files. I never ever thought that a 13 line .SIG could cause so much controversy. I was simply expressing my individuality, and a little bit of originality, thats all. I have a naturally buoyant, enthusiastic attitude and I tend to express this in everything I do. You can double that for anything Atari related... I apologize that I got carried away...

PS Just for the record, I examined the 200 msgs
posted in the Atari newsgroups that I d/l'ed
today, and around 65% had larger than 4 lines
for .SIGs, including some of the people who
told me to "ditch" my .SIG... <smile>

flux@thing.net (Frank Rothkamm) writes:

> Is there a way to connect a larger monitor to the ST?
> With larger than 640x400 resolution.

Now that's a bit off-topic, isn't it ?

Your subject line mentions an STE, if that's a Mega STE rather than a 1040 STE
(which is not clear from "STe"), then you can fit most VME graphic cards to
give you higher resolutions.

This is not available for the 1040 STe and plain STs. I did a hardware hack
for my ST which gave me pleasant 960x544, but that's only for experienced
hardware freaks.

> I want to see more in Cubase.

Are you sure Cubase would be ready to work with it ? AFAIK most audio software
is pretty dirty programming in that respect that it can't cope with anything
but standard ST configurations. I might be wrong here in the case of Cubase,
I dunno.

e>

Minix is great in that it gives you long file name support, and as well a
wing
files to have read, write attributes, it also allows you to assign files to
different users. Minix is also faster than the standard TOS filesystem.

The downside to minix is that you need Mint running with its' minix drive
rder
for your Atari to see the partitions, and not everybody likes MiNT. MiNT also
takes quite a bit of your Atari's resources to run.

The alternative is Magic. The latest versions of Magic allow the use of long
filenames which is compatible with the Windows 95 system. Magic also allows
you to have partitions > 1Gig.

Regards,

Ben Hills.

1809. Using CAB v1.5 with Passwords

Newsgroup: comp.sys.atari.st
Date: 1997-11-03 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <878521130_OASIS_@pcc-uky.campus.mci.net>
Source record: 114165

Can anyone tell me how to get CAB v1.5 to work with Web sites that require Userid/password entry? CAB blows up a dialog that says "document protected" and you can enter your userid, then another dialog where you can enter your password, but this does not work. Both dialog boxes come back time after time, until I get a Web page that says 401 Unauthorized. Also, after this happens, CAB leaves 3 files in its folder:

AUTH.OUT
AUTH.TMP
'~`

The last file is gibberish, as you can see. I can delete them all, and do since they don't say anything that is readable. Thanks in advance... :)

(BTW, I can enter my name/address etc, into fields on these Web pages, simply by clicking in them and then typing. Thats not what my problem is-the dialogs I'm talking about come from CAB and not the Web page!)

Has anyone in the USA bought it yet? I don't want to be the first guinea
pig to buy it. Just spent $103 for MagiC so I want the purchase of CAB 2.5
to go smoothly. Nothing wrong with MagiC but its not that useful to me.
I know I can use CAB.

Yes. I could not agree more, Peter. A single product is not healthy
however good it is.

>Apparently Wensuite improved quite a lot
>with the last few releases (I still need to check it out myself),

I have been tracking this whenever a new release appears.

It "looks" nice and has good usability features but I have not yet
managed to do any on-line browsing with any release :-) There is
always something which gets in the way. I have managed a PPP connect
but the browser didn't work. Then the browser came to life but the
connect failed <sigh!>. Now 2.25 gives store failure when attempting
to display its own local doc.htm. One day it might all come together
at the same time :-)

maybe the
>programmers would feel like porting their Internet access plug-in to STinG,

1816. MUD Telnet Needed....?

Newsgroup: comp.sys.atari.st
Date: 1997-11-03 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <878566954_OASIS_@jaubrey.demon.co.uk>
Source record: 114172

At a recent visit to a local cybercafe with a few friends, we discovered a brilliant telnet programme they had for MUD games. It was similar to an IRC type programme, where there is a seperate box at bottom of the screen for text input, when you press return it'll feed the line of text at the correct prompt. This also means that you can see what you're typing and the scrolling text does not confuse you as you're typing. Is there such a programme for our platform, or can AtarIRC be altered slightly to be used for MUD games as discribed?

Hi!

The German version of Thing 1.20 has been released. It's available via
anonymous ftp, URL is ftp://ftp.uni-kl.de/pub/atari/incoming/thin120d.lzh,
but it should soon be ftp://ftp.uni-kl.de/pub/atari/shell/thin120d.lzh.

Note that Thing 1.20 requires an update fee for registered users of 1.0x.

An English version will be available in a few weeks.

Ciao

Thomas

Agree it is much faster but most pages looks very awfull when
viewed with Wensuite.
Animated gif's, backcolor of tables and frames just to name a few
things that cross my mind right now aren't supported.
Furthermore there is a big problem with some HTML-tags
The only positive points are the speed and the build in news- and
mailreader.
There is still a long way to go before it can compete with Cab.

>Agreed, the www131 package is way out of date now.

Thats because I stopped doing them after people complained it was too
big.. There was some ideas about making a new www package with just
cab/cab.ovl/stik a while ago.. but then Cab went commercial. If there
is enough people wanting a new www package I'll see what I can do but
I dont see what the difference between a all in one package and
downloading them seperately. After all they were only all the packages
extracted a few docs added and then repackaged again.

Dennis,

These were the best astronomy programs ever written for the Atari. They were by Andrzej Wrotniak, who also wrote for Current Notes. He left the Atari world several years ago. The last time I was in Toad, about a year ago, they had several copies of these programs. You might give them a call. If you don't have any luck there, send me an email; I used to have Andrzej' address; perhaps I can locate it.

By the way, you can find a working demo on Genie.

(I will not sell my copies.)

>wonder if this has been done? Does anyone know anything about this?

Ahh, yep that was me.

Didn't finish because I got a A/D converter that will lock to Word Clock.

BOTOH, Aardvark makes a adapter for Word Clock to S/PDIF. Now one can might
be able to take apart this adapter and rig it up. The clock signal to the
Falcon is on pin 26 (I think, cause I don't have my text file with me)

Aardvark http://www.aardvark-pro.com

Or the adapter may separate the clock signal from the S/PDIF signal. (I forget)

Regards,

Rich

There is one 64MHz and one 32MHz clock, but...

>used an '040, I remember all the stores displaying it with a 66/33MHz
>'040. When I asked what this meant, that's how it was explained to me.

That's exactly the kind of misguided advertising that Centek is talking
about.

It has never been reasonable to call the '040 a 66/33MHz processor. That
was just done to make it look better in comparison with for example the
486DX2.

As Centek said, there is indeed a 64MHz clock signal, but it's only used
for some internal synchronization. The maximum possible instruction rate
is 32 million/s. The 486DX2 on the other hand actually processes
instructions twice as fast internally as the original 486.

>Perhaps the confusion is that *internally* it IS a 64MHz processor, but

It's not.

>the bus rate on it is only 32MHz, thus giving the above results. Or maybe

A divide does nothing on the bus, so that can't be the case.

>there are other speeds of '040 than the one on the afterburner. The Falcon
>has a 16MHz '030, but that doesn't mean a 32MHz '030 doesn't exist (i.e.

There are _no_ 64MHz '040s.

>in the TT). Or maybe I just don't know enough about these things to know
>what I'm talking about! <:) Just thinking out-loud! :)

The problem is that you've been fooled by pre-Centek advertising. ;-)

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

The Portland Atari Club is back, and we are now in the process of picking up the pieces and reorganizing the club.

Former President David Hunt has stepped back in as President, and is now interested in rebuilding the club back to it's former glory like it was under his past presidency.

The plans are veery ambitious, and he is planning on offering support not only for the 8-Bit and ST lines of computers, but also the Falcon, Jaguar, Atari 2600/5200/7800, and anyone using emulators on ANY platform!

We invite you to come and help us mold this club into one of the most dynamic clubs in the nation once again.

Our next meeting will be at the Round Table Pizza Parlor located across 122nd Ave, and just South of K-Mart on SE 122nd & Sandy Blvd. in Portland, Oregon.

Take I-205 to the Sandy Blvd. Exit, go East on Sandy to 122nd Ave, then several blocks South to Round Table Pizza on the West Side of the street.

The meeting will start 7:00pm on Tuesday Nov. 4th, 1997.

Come and join in, we want your input.

For further information, please contact Ben Smith, Vice President, (503)-256-9974 24hrs.

David Hunt, President

1837. Re: CAB v2 Demo - Problem with long URL

>> Necscape Communicator. Now that's laughable!

>And it's bit more than unfair what you're saying here. You're complaining
>about a bug in CAB V2.0, fair enough. But for one, many people do not go
>to CGI based sites very often, so for them CAB might well be just as good as
>Netscape Communicator. Then you're announcing that a program is generally
>useless because of a bug, that you've checked to exist in an outdated version.
>Now that's laughable, isn't it.

>First you should check if the bug is still there in V2.5. If it is, then you
>may say it's useless for you right now. But a general statement calling CAB
>useless for everybody for all future (which your statement implicitly implied)
>is ridiculous.

There's some thruth in what you're saying. But how could I check if the
bug is still there in v.2.5? The only way I can check out CAB without
buying it, is through the demo, and it has the bug. If I find a demo of a
program, and it falls flat on its face in tasks that are very important
to me, then I do not buy the program. Behind my somewhat exaggerated
statement is of course lots of frustration with this bug. It took me
long time, and lots of sweat and cursing, before I finally realised that
it was _not_ my cgi scripts that were wrong, but CAB!

Now, gladly, someone has announced that this bug seems to be gone in
v.2.5. That's great, but I would be happy if this was confirmed be others.

BTW: Many people do visit cgi based sites very frequently. Many search
sites are heavily cgi dependent. The buggy CAB can not deal with searches
through Alta Vista.

A WINCAP file is only necessary for non-SCSI drives when running HDX by
Atari. Other driver packages don't need such a file. Even HDX doesn't
need a WINCAP file if you have a SCSI drive. AHDI doesn't need the
WINCAP file at all.

: ... Is there such a programme for our platform...?

The original MUDs all used a standard telnet window to participate in them. No special "MUD" software was required on the part of the "player." Assuming this is the case for this MUD, just download one of the telnet applications available. If you are using STING, there are two telnet applications I am familiar with: TELSTAR, by Peter Rotengater, and TelVT102 by Boris Cahan (I hope I spelled their various names correctly but have to work from memory at the moment). Both files are available at ftp://128.120.234.42/atari. Other solutions exist if you are using some other method to connect to the Internet (e.g. MintNet).

Body handling: HTML body converted to readable text

I was wondering if Clayton Walnum is still involved into
'C' programming on the Atari platform?

He authored a really good series on 'C' programming for the
Atari platform is ST-Log, in the early 90's and eventually
compiled it all into a book called "Cmanship Complete".

While his book is now somewhat outdated (in regards to any
multi-tasking considerations) this is still THE book about
programming in 'C' for the Atari ST/TT/Falcon.

What could/should be done is an HTML version on CD-Rom, to
help those just getting started into programming their ST;
the same thing that was done for The Atari Compendium some
2 years ago.

However, first, we have to find the man himself for proper
authorizations and, if he's so inclined, to update the info
contained in his book.

Clayton, if you are reading this, please respond! ;-)

Yes but in James' original message he mentioned being able to see what
he is typing and as such this rules out the current version of
TelVT102 as it does not have a local echo option.

Something which I believe he mentioned when TelVT102 was first
released.

1853. Falcon/SPDIF/ADAT word clock?

Newsgroup: comp.sys.atari.st
Date: 1997-11-03 00:00:00 UTC
From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <345E3550.7B382725@intuit.com>
Source record: 114209
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Some time ago, there was some discussion on creating a word clock modification to either the SPDIF or ADAT interfaces for the Falcon. I wonder if this has been done? Does anyone know anything about this?

Thanks..

-Mark

This has to do with cab.ovl and not cab... Eg cab.ovl needs to support
this and not cab itself.

Nick.

> on the pinged host.

After I changed protocol to slip and increased the buffers in MIDI.PRG
(hsmoda7) to 16384 it now does work. I still have problems with lost
packets in 31250 bps on the Stacy. With a minimal setup and no mouse
movements it�s nearly ok but with Neodesk+Geneva and mouse accelerator etc.
loaded I loose up to 25 %. In 7812 bps midi speed however it runs perfect.
MSTe shows same symthoms when in 8 Mhz mode. When runned in 16 Mhz it seems
ok.
The Masquerade part also works perfectly. I can run CAB on both machines
downloading at the same time and even when Newswatch, Popwatch and CAB are
all busy downloading on the Stacy and CAB downloads on the MSTe and both
machines are pinging each other it still runs fine.

> > I suppose the hardest problem will be to make Win-95 talk tcp-ip on a
> > null-modem cable to the MSTe but there was some talk in this group, on
>
> I cannot help on this part ...

You are almost too helpful on the Atari side already. You should turn your
modem off and continu the development of these very fine programs :-)

Actually I managed to ping the Win95 machine too. I did find a driver that
sort of worked by fooling the dialer that a modem was online. Internet
Explorer could not resolve however. I have not checked yet what went wrong.
It�s a bit more dangerous to fiddle around with settings on the pc compared
to Atari so one has to be careful.

By the way, earlier versions of Sting did run under Gemulator (v. 4.50
demo) but did not work with my isp. Now STING.PRG crasches with 8 bombs.
Not a major problem really but it could possibly indicate that there will
be errors on other hardware (Hades etc.) as well.

***
My Second winning bidder on the first repost has faded into oblivian!
(sigh...not again)!
For the third time...see below. First $60 US (plus shipping at buyers
expense) takes the lot.
I will consider offers on individual items.
***

I recently acquired this hardware (well, it was recent the first time I
posted this!),
and to be honest, "my eyes were bigger than my stomach" (i.e. not enough
room). These
Atari items were gathering dust, so a good cleaning in and out would be
in order. I
have no manuals, software, or original boxes, just the hardware.
In any case, here is what I have for sale:

Atari 520ST w/PS
Able to get it to boot up into the GEM desktop (no mouse to use) and
using the alt-arrows able to move around a bit. Seems to be working
fine. Not sure what TOS version, as all it said was TOS.

Atari SF354 w/PS and connecting cable
No diskettes to test with, but whirs, clicks, etc. when booting the :
ST. Looks good...but buyer beware since I cannot test it adequately.

Atari SM124
Seems to work fine and looks good. Just a hint of a picture "wobble"
at left corner. Didn't seem to be annoying...but thought it worth
mentioning.

Location of items is: Houston, TX.
Send offers/inquiries to: dennis_cooper@administaff.com

Thanks for looking,

Dennis Cooper

After buying quite a few computers i've accumulated duplicates of

these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Golden Image Hand Scanner & Touch Up Software ..... $ 50
* Spectre GCR Mac Emulator ..... $ 35
* Atari 1040/working but a few keys needs to be replaced . $ 15
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* Monitor Switch Box ..... $ 5
* External Disk Drive ..... $ 25
* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10
* Black and White Monitor ..... $ 35

Software: All With Manuals

* Phasar Professional Home Accounting System ..... $ 10
* Dr T Copyist Music Scoring Program ..... $ 5
* Hybrid Arts EZ Score Plus ..... $ 5
* Edit Plus Professional Editing Tool ..... $ 10
* Easy Draw ..... $ 10
* Degas Elite ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* Steno/Text Editor ..... $ 10
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* The Juggler ..... $ 5

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10
* Carrier Command/ Tactical Warfare ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10
* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10

* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10
* Gun Ship/Helicopter Fighter ..... $ 10
* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Curse Of The Azure Bonds ..... $ 10
* Breach ..... $ 10
* Inside Brataccas ..... $ 10
* Star Fleet ..... $ 10
* Time Bandit ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5
* Lure Of The Temptess ..... $ 5
* Civilization/ 4 Disk ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3

If there's something you're looking for and it's not on the list
let me know... I have 2 closets I haven't gotten to yet plus over
my mother's house I have stuff. Willing to work on package
prices. Buyer(s) pays postage!! All reasonable offers will be
considered!!!

I've got enough french to struggle through the lingo - makes a change
from wading through german.

Yup, I've got hold of 2.25f now. Very colourful - and all those
clients in one package!!

It looks as though the trouble I am getting started at v2.xx as 1.17k
browses well.

I've discovered, after a bit of messing about, that the "Memory block
destroyed by user program" only occurs when I'm using Magic v4. If I
load up with just TOS+NVDI the 2.25f is OK. It looks as though the oxo
gang changed memory management from v2 onwards which is causing Mag v4
to feel ill.

I know Mag v4 was flakey with the Falc. but I have not heard of
problems with the TT. I wonder whether I am missing some patches?
Perhaps the prob. will just go away again in future Wens.

Hey, it's a great experience with each release of Wen. You are never
sure what language it will be in. Then you find all the dialogues have
changed - some bits missing, some disabled and then some NEW ones :-)
It's better than a computer adventure game.

It's beginning to look a bit more promising now - reliable connect,
reasonably speedy display, signs of life on the mail/news side. Hmm
.. no sign of a hotlist, though, I have to point at the one I keep in
CAB.

Ah yes. Apologies. My connect trouble was due to me entering the wrong number for my ISP!!

The display prob. is still with me though. It seems that Magic v4 may be responsible as Wen works fine if I load without it. I don't suppose you have v4 on your Falc., do you, as it caused the Falc to blow up anyway.

Hi.
I am trying unsuccesfully to connect to Internet Africa here in South Africa.

- Wensuite connects in PAP or Text, but never manages to negociate an IP address with the ISP. It just hangs up on me.

- Sting connects OK, I get my IP address, I can ping myself but not the outer world. I have set my "route" file as follows :
0.0.0.0 0.0.0.0 Modem 2 0.0.0.0
or
0.0.0.0 255.255.255.255 Modem 2 0.0.0.0
In both cases : no luck.

Any idea ?

Thanks,
Steph

Primenet.com covers most of SC and quite a bit of the rest of the
nation.

Works well with CAB/STiK.

Works better with CAB/STinG, slip

I've asked compression to be turned back on (they haven't gotten
around to it, yet) because I expect CAB/STinG, Cslip to work better.

So far, doesn't work with CAB/STinG, ppp

>the DIAL.LOG, the latter is of little use for debugging (it's just for the
>user to keep track of his connection times and traffic).

Okay, the results are as follows. Note that the domain name I used had been previously resolved with STinG/slip. Otherwise, I don't knowif this would have been successful (I think it would have just hung):

Ping
Sent: 123 packets
Received: 0

STinG Statistics
General
low memory: 0
TTL exceeded: 0
Wrong checksum: 0
Undeliverable: 0
Total datagrams: 2529

Port (SER2/LAN)
Dropped:
Send: 7280 bytes
Received: 0 bytes

Protocols (Dropped)
ICMP: 0
Resolver: 0
TCP: 22
UDP: 0

Okay, so you're going to tell me that the received IP is wrong and, therefore, no data is coming back. Why???

One more piece of the puzzle: If I use $GET_IP (makes moving back and forth between slip and ppp a bit quicker) I receive an IP. The IP is displayed by the dialer. Subsequently, the initialization begins and IP success is reported and the received IP remains the same. So, if the IP is wrong it is wrong twice using two different methods. No, there must be something else going on here.

>What you can do is ask your ISP if you got a proper connection. If they got
>competent people sitting there, it should be quite easy for them to monitor

>on their side what your connection is doing. Thus, while you attempt to ping,
>they should be able to pin-point the problem, which would be an immense help
>for me to fix it.

Okay, will do that as soon as I get them to uncompress me. They've
been slow to get back to me this time and I don't want to over load
them with too many unusual requests at one time! ;-)

Thanks a bunch for all the help. It is very much appreciated. Heck, I
can actually report that STinG/slip appears to out perform STiK. I
could never say this before but CAB really appears much faster. I'd
like ppp, but I'm sure not complaining!

> ok.

It definitely looks as if some AUTO program or tool or accessory stays in
Supervisor mode to long, or disables interuts for to long. Try to switch
off all that is not really necessary for an attempt to find out.

> The Masquerade part also works perfectly. I can run CAB on both machines

>
> By the way, earlier versions of Sting did run under Gemulator (v. 4.50
> demo) but did not work with my isp. Now STING.PRG crasches with 8 bombs.

8 bombs indicate privilege violation. Actually STinG employs the privilege
violation since last version (check the HYP) to do some internal protection.

This will not cause any problems with normal programs, nor does it with properly programmed monitors debuggers or emulators (properly means here, properly employing the XBRA mechanism to deal with the privilege violation).

I suspect from this the Gemulator does some pretty dirty trick in conjunction with privilege violations. Certainly the emulation is not well done there.

> Not a major problem really but it could possibly indicate that there will
> be errors on other hardware (Hades etc.) as well.

None at all ! (as yet at least ...)

Cheers Peter

Yeah, it's a shame. Everyone having contact with Dan Ackerman ("Baldrick"
on IRC) from time to time should remind him to fix it.

>
> There's some thruth in what you're saying. But how could I check if the
> bug is still there in v.2.5? The only way I can check out CAB without

There is little way. I agree Alexander should prepare a comprehensive text
document that is available to all CAB 1.5 users to keep them from dismissing
CAB completely for the lack of features that are implemented in V2.5 or future
versions. The history document that comes with CAB is something similar, but
it's hard to read, especially for non-programmers.

The situation is complicated by the fact that many features are provided by
the CAB.OVL rather than CAB itself, and sometimes it's difficult to determine
if it's the CAB.OVL or CAB being at fault.

Yes. It would make a fine integrated package, it looks as though FTP
is there, too. I think I would still like to pick-and-choose my
clients, though, so it would be great if they all talked the same
language to the TCP/IP link.

Good job. What kind of monitor is it ? Most MIDI applications require a
monochrome monitor (like an SM124 or SM125). A hard drive is really
optional (although comfortable) if all you are going to use is a
sequencer.

> Anyhow, is there any software I can use with this ST to sequence my keyboard
> and sampler.

Yes, plenty, but mostly second hand if you are looking for commercial
stuff. Look out for copies of Cubase or Notator (or Logic) which are
professional tools still widely used in studios and by professional
musicians. If you buy a copy, make sure it comes with the manual and
dongle (cartridge) as they won't run without it.

If you are more on the shareware market, you can take a try with Sweet16
(Roni software) or Alchemie (old and unsupported) which are not bad, but
do not compare with the stuff above in ease of use, speed or
fonctionality.

>
> If there is and you know where I can pick it up I would be extremely happy
> to hear about it.
>

Alchemie can be found on several FTP sites (try the umich one). Roni
software have a web page at: http://home1.swipnet.se/~w-11396/

Have fun

There will be.

> I like WS2.25, but there still are bugs in getting some individuals Web
> pages that use virtual servers. Obviously, development is being improved
> lately, so here's a couple of questions:

Although wuite promising, Wensuite is still in a quite unstable beta
phase at the moment, so lots of things aren't implemented and others
either don't respond, crash, bomb or hang. BTW, there'll be a 2.25g in a
few days.

>
> 1) Translation of Welcome.htm and the Option(Fichiers/Communication
> parameters).

Ok, hhere go the main setup dialogs:

Options
Display (Affichage)
General & graphique are various display parameters.
Texte, Titre, and Non-Prop are for text, title and
non-proportional fonts.

Files (Fichiers)
It looks like you HAVE to set an external editor, and
fill in the mail and news servers. Repertoires means
'directories' and is quite self explanatory.

Communication
General: Machine name (what for?), user name, sig text,
DNS Cache (clear at start of session). Visualisation
seems to be for MIME helpers apps. Mail is for mail
server authentification if required. Champs is for
header fields to display, Liste is for Mail/News list

presentation.

Barre d'outils Tool bar
Barre d'infos Information bar
Chargemt images Image load
Sauver Save options

The other important dialog to fill out is Fichier> PPP Link

Connexion
Nothing to fill in, just Connect/Disconnect

Login
Phone number, login, password, authentification protocol
PAP works with me, otherwise choose Texte and move to...

Dialogue
is for setting the login script with 'receive' and
'send' fields. I guess it waits for what's in the
receive box and then sends what's in the send box.

Adresses
IP address: the tickbox is for permanent IPs. Pas
d'attente is 'no wait for: confirm PPP and confirm IP.
Follow thhe DNS servers, and proxy (not implemented yet
say the docs)

Modem
This is already correctly set, good old modem parameters
Oh, Chaine de numeroration is 'number string' and should
be set to ATDT for most people. Only use the
'reinitialise modem' box, not the other one

Ouf! Hope this helps someone!

> 2) Modem Initialisation, I use AFT10 which is 19200 baud. My modem docs
> don't mention a faster setting though it supports 115k2.

Can't help you here...

> 3) Is PAP protocol and VJ compression supported in this version?

PAP definitely works for me: no need for a script. Don't know about VJ.

I might be completely wrong about this, it does happen, but I think
the clockpatch is a hardware thing. My knowledge is limited in these
matters and I certainly don't know enough to tell you how to fit the
patch. Others here, Magnus etc., know far more about it.

My understanding is that the clock signals on the Falcon motherboard
are, to say the least, a little weak. This weakness can cause
problems if you load the system.
My Falcon has the clockpatch fitted to make the Afterburner040 work.

Rich.

Hmmm, thought I answered that one by writing :

| This ! Because it's just what you told it. You've told it ...

It is normal and correct behaviour for the given input.

>>I somehow doubt that this is what you wanted !
> why? how come?
> So this route is not correct for a simple way internet connection with
> the dialer? (no masquerading, no network no nothing else).

Seems I should elaborate once again on networks, netmasks, gateways and
routes.

There are a few things you should realize in order to understand how routing
works in TCP/IP stacks like STinG, MiNTnet, Unix TCP/IP code, etc. that are
capable of routing. First, note all IP addresses, network addresses, netmasks
are 32 bit numbers meant to specify something (a host (interface), a network,
etc.). The dotted quad notation is only a convenient way of writing and memo-
rizing addresses. This will become important later. Next remember Internet
and Intranets are nothing more than a interconnected set of networks. A net-
work, like Ethernet, is some wire to which a number of hosts is connected
such that any host can talk directly to each other without keeping other
hosts busy by requiring them to pass on data (For Token Rings or MidiNet you
need to generalize a little, but still the same concept). As the data tra-
verses a network but is bound for a host not being in that network, it has
to be passed on to another network by a router, or gateway (these two terms
used to be interchangeable, which somewhat changed. Now they're more clearly
defined as not being the same thing, but I won't elaborate on that, for now
take the two words to mean the same). This passing on is called a "hop", for

instance if I send data from Germany to Australia there will be at the order of 20 hops until the data reaches the destination host. If you talk about a specific network, there is *a* gateway out of the network, the machine any data must go through to reach any other network. Now realize the implications for a serial line. Such a line is a network too, but a poor one, as there are only two hosts that can talk to each other directly. Thus the concept of a gateway is meaningless here. Data traversing a "serial line network" goes to the other end, regardless if anybody specified a gateway anyway, or not.

If you swallowed that, apply a little common sense to it. A TCP/IP kernel has the duty to pass on data to bring the data somewhat closer (in network terms, not geography) to the destination, it has to send it away via some port to which another network is attached. The destination might be in that network, then the data can be delivered. Or it might not be in that network, then the data needs to be send to the gateway that would know how to pass on the data. For the serial line these two cases are indistinguishable, i.e. the data is simply sent, and the other host will know whether the data was bound for it, or needs to be passed on. Thus there is no need to specify a gateway for a serial line. This is probably one thing Ken Macdonald wondered : He specified a gateway for a serial line, and was puzzled that STinG discarded the gate-way address, simply showing "----" as the gateway entry. Of course STinG knows if a given port leads to a "point to point network", consisting of only two hosts, not needing a gateway; or to a real network where a gateway is required.

So now, how does a TCP/IP kernel determine via which port data is to be sent ? This is specified in the routing table of course. To understand that in detail, subnetting must be understood. The Internet is a big network with constituent networks. For routing, these networks must be addressed, i.e. there must be a way to say "this data must go to network A". The means to label networks are the network address and the (sub-)netmask. The network address comprises all those bits of the 32 bit IP addresses of the constituent hosts, that are identical. So if all IP addresses within that network have bit 20 set to one, the network address of that network will have bit 20 set to one too. If all IP addresses within that network have bit 22 set to zero, the network address of that network will have bit 22 set to zero too. What you can do is write 32 "x"s, then sub-sequently replace them by ones or zeros as found to be identical in that bit position in all IP addresses in the network. You'll end up with the network address. But there are "x"s remaining, of course, which - by taking varying values - identify the hosts within the network. Those "x" do not fit into a 32 bit value that is suitable for a machine. Thus by convention they are set to zero. But now we need some means to distinguish those "convention zeros" from the ones being part of the network address. This is the netmask, which has ones where the corresponding bit position in the network address is significant, and zeros, where the network address has a "convention zero".

This doesn't sound all too obvious, does it ? The benefit of the scheme is that it is very easy and efficiently handled by routers. The task routers have to perform all the time is determine if a given IP address is in a given network (as specified by the network address and the netmask). To that end, it only needs to bitwise AND (one machine instruction) the 32 bit IP address with the 32 bit netmask, and compare (another machine instruction) the result to the 32

bit network address. If they're the same, the IP address is in the network, or is not elsewise.

So now let's have a look at Ken's example. He specified a netmask 255.255.255.0, therefore rendering the last 8 bit as insignificant. Yet he specified a network address of 198.231.68.128, which has a one bit in the insignificant part (the 128). Consequently STinG chops that off, it must do it, as no IP address in the whole world would result in 198.231.68.128 when ANDed with 255.255.255.0. The result of the chopping is 198.231.68.0 which left Ken puzzled again. But it's perfectly sensible. Let's assume for the moment that he indeed wanted this (the last 8 bit are insignificant, so he can write there whatever he wants, even 128). What does this specify ? It specifies a route to the network 198.231.68.0 (this is none of the private IP address sets, so this is part of the Internet) with netmask 255.255.255.0. Basically he specifies 254 IP addresses at most that can be reached this way (198.231.68.1 ... 198.231.68.254 - 0 and 255 have special meanings). If his ISP is small, he might be able to reach all hosts of his ISP, but nothing else. He would not succeed to view my web page, as he'd need to contact www.stud.uni-hannover.de which resolves to 130.75.176.2. That address ANDed with 255.255.255.0 gives 130.75.176.0, which is not 198.231.68.0, thus data bound for my web server would be discarded as there is no route for it. So you see my statement that I'd doubt he wanted that is not just pointless guessing.

Now you might ask, how to do it properly ? Easy stuff. Basically you want all data routed through the modem port, regardless of IP address. So you do not consider any bit in the IP address significant, so you choose a netmask of 0.0.0.0. The corresponding network address of course is 0.0.0.0 too. This is the so-called default route, because it takes all that was dismissed by other routes, if being the last entry in the routing table (that is because the router goes sequentially through the routing table entries for each datagram until it finds a route that fits).

Note that with the latest STinG you do not need to bother with any of this. The new Dialer now is aware of the 'Add default route' flag, if set, it automagically creates a default route for you. You find the entry in Configs/Miscellaneous or DIAL.SCR (DEF_ROUTE).

The only case where you need to deal with all this is when you set up your own little Intranet, by connecting Ataris with serial lines (parallel lines and Ethernet are being worked on). The most basic setup would involve routing tables on each host that have an entry for each other machine in the Intranet, specifying the port through which the machine is reached. In an advanced setup you'd skill-fully choose network addresses and netmasks to combine entries to optimise the routing performance. I leave that as an exercise.

Cheers Peter

That's strange. It works nice (off line) under STonx on my Unix
box as well as at home at my Falcon. No problems at all and its very
fast,
even under STonx it "flies".

Anybody interested in contacting Clayton could drop by his web page at:

http://www.connix.com/~cwalnum/

Or email him:

cwalnum@connix.com

It seems he wrote a further three books on Atari programming:
The ST Assembly Language Workshop
AES Quick Reference
VDI Quick Reference

All of these and Cmanship were self-published in the States. If he were to authorise a public domain version of his works, I would personally favour an ST Guide version or at least an HTML version distributed over the net or by floppy as I don't have a CD ROM drive :-(

Yo Roger,

Hows your French language classes going, dude <g>? Kemosabie (friend) all you have to do is open Fichier (File) and click on "Web". That will open the HTML Web Page for you :) Then you can open any html page in WEBSuite. WS's v2.25f came with the Mail/News Page open instead of the Welcome.htm page as normal with 1.71. They also changed the pppLink settings a bit. It would be easier with a English rsc file, right? Good luck.

Cheers,

Charles

I think it will support STiNG. Atleast there is a button for selecting
STiK, but
I don't think it works right now. On the other hand, WenSuit supports
Mail and
News as well (which looks very nice as well) so there isn't realy a need
for
using STiNG, if they can get their own code to work.... ;-)

Have you tried to display WEN's doc.htm, Thomas? This gives me a
store error on my config. v1.70k will display it OK.

What about IRC, Telnet, FTP etc? I hate the way people most people seem
to think the net is mail news and web, for some people this may be the
case.. but for others including me these are just a very small ammount
of what the internet is. For people who only want these then I say go
for it use whatever you want. For people who want to use the Whole
Internet and not just a few parts of it I still think a stik
compatible stack is the best be that stik, sting, or gluestik.
Competition is all very well just see what happened on the PC to show
that. But they didn't have competing and incompatible stacks as well.

Hello Everybody,

I've loaded on my home page the 3.28 version of EB modeller.
It's a 3D modeller for Persistence Of Vision III made by
Emmanuel BARANGER. It's shareware, and you will find an
evaluation version on my page. It's a complete version
except that the POV export is limited. You can register
from the author. The new point is that it is now available
with an English resource. Have fun with it ... It's a
superbe program ... Thanks to all, Bye for now ...

Thanks, once I manage to get things re-organized, I will indeed be looking for such connections once again. It seems as though in my absence, all such benefits and contacts have been lost, but since I have resurrected PAC from the ashes before, I am pretty confident I can do it again.

Ah, I can't find this in my htm's, Peter. BUT ... I ran Wensuite
without Magic v4 and this "memory block destroyed by user" problem
went away - doc.htm now displays OK. Hmm .. v1.70 will display OK WITH
Magic so I guess oxo has changed its memory management in v2.x in some
way which disturbs Magic v4. I will need some more work to track this
down.

I thought Magic v4 was OK with TTs? It was just Falcs. which disturbed
it.

BTW, the failure to connect was ENTIRELY my fault :-(I had a small
dyslexic attack when entering the ISPs phone number :-/

Stupid. Okay. Thank you for that insight. BTW, its not my fault that
"newbies" don't know to to reply correctly. Why don't you correct them
instead of me? :)

> BTW it's perhaps much more irritating because of this: in the past
>year or so I wrote you 3 times about this, once privately, twice as a
>never replied or changed anything in your behaviour. I'd say this shows
>your respect for other one's opinion...

Hmm...I honestly don't remember any messages like that, although its
easily possible-I get quite a few messages. As to my respect for others
opinions, I'll let my record stand for itself. There are plenty of Atari
users around who know me well enough that I don't have to defend myself.

>Bruno.
>
>
>PS: I don't know if I'll post this one, the Netiquette says to never

It really didn't seem to slow you down, old chap...! :)

>PS2: Even your sig separator is false (known Oasis bug): it should be
> "-- " (minus minus space) and not 2 underscores.

AND a known bug with Oasis is my fault? You're right-guess I should have
reprogrammed Oasis ages ago! <smile>

You know, I think this whole thing is getting -way- out of hand. How about
lets just drop it, okay? I really dislike arguing with other Atari users,
and after all--I changed my .SIG over 2 days ago... :)

Source record: 114234

heheh, well What I have to say is:
If most people have a slow connection meaning 19200 bds,
If they have to pay an expensive telephone fee
If they read all the news, daily.
3 lines more for your .sig than the usual lenght won't kill a cow,
that would represent a very minimum difference.
Now, if EVERYONE had a long sig, that would make this difference a
little bigger, but still very minimum.

1) people who don't want to spend money on the internet generaly avoid
newsgroups.
2) on atari we are kinda blessed, we don't have a 500 new messages a
DAY, like on some other newsgroups.
3) Use a more intelligent mail/news reader, example, Get only the
messages you want.

That's it..

: Any solution anyone ?
:
: BTW : I am using 4Kserbuf.prg from Wensuite to "stimulate" my COM port,
: I hope it is OK !

HSMODEM is the standard accepted modem port patch for STING, rather than 4KSERBUF. But don't be surprised if this still does not solve your problem. Your description of your symptoms matches exactly the symptoms that I have with one of the local ISP's and that other Atarians have described in this newsgroup. Connecting, link established, but an inability to ping any source other than one's own computer. I know Peter is aware of this problem, hopefully it will be resolved soon, but, for me anyway, even the latest patches to the modules and dialer do not solve this problem.

Hello!

You can go to my homepage at http://home1.swipnet.se/~w-12411 and press the
Sweet 16 button on my left linkframe. Sweet 16 is a very good sequencer program
at a very low cost. And it works very good without a harddrive. I can higly
recommend it. (I use it myself) You can download a working Demo on the page that
appears when pressing the button.

>Sketchy German documentation doesn't help!
>
>If any one knows how to configure HSModem please let me know.

The TT can handle 38400 on Modem-2, by design.
This will drive your 28800 just fine.

You don't have to setup anything. Just unpack:

DRIVN.PRG, MIDI.PRG, MFP.PRG, MFP_TT.PRG and SCC.PRG

in that order. You don't need to fiddle with anything at all.
If you really must confirm visually what settings you have,
ditch Modem.CPX and replace it with Peter Rottengatter's
Serial.CPX which shows correct baudrates.

If that's all evidence, then you have no evidence at all ! Errors that
go away if MagiC is not used usually are only hidden, partially by the
"do-not-check-but-crash-instead" attitude of single-TOS.

Cheers Peter

I've found the SMC_TT project to adapt an ISA ethernet card to the VME TT bus, but it needs a CIRCU IT program with a ROUTE IT routine, does anybody know where to find this software ?

Anybody know about that ethernet project or could evend send it already assembled ?

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

Previous postings ⊠Macro Markets⊠, ⊠Mission Markets⊠, ⊠Moonbeam Markets⊠, ⊠Meandering Markets⊠, ⊠Mirky Markets⊠, and ⊠Marvelous Markets⊠ may be of interest.

As Little Orphan Annie⊠s dog would say - Grrrr... Roff !

My next posting is Saturday because I *really* have to get some sleep. This past week has been quite a month. Last posting ⊠Macro Markets⊠ *seemed* to imply that I wanted you to thank me. What I *intended* was a reminder that we all owe our prosperity and our very survival to millions of people willing to set aside personal convenience to achieve a benefit for society. If the complainer has a personal axe to grind (as I do), then I see no reason why that should detract from the quality of the resulting benefit. Do NOT send me email unless you have something *critically* important to say, because it could choke my machine. To those who already sent it, yes you are welcome. If you like what I say so much, then do something about it. Fix the problems I mention. That is the most sincere form of appreciation.

Speaking of choking machines, I have some unsolicited advice for AOL users. Unless you have *business* to transact, or some other legitimate and *necessary* task to perform, then GET OFF THE WEB DURING OFFICE HOURS !!! If you can lay hands on a spammer, administer justice. Do *not* reply to a spam since that just makes the web traffic even greater. Learn how to use your browser properly in off hours. If you get more than a few hits on a search, chances are that you need to learn more. Think about what you really want to find *before* you do a search. If you do a web search, constrain the date (and newsgroup) whenever possible. Some search engines (like Hotbot) also allow geographical constraint - use that if possible. When you know what you are searching for, type it in. Do not use wildcards just to save a few keystrokes. If most of the postings on a news group are junk, then cancel it so that you do not choke the mail system. For example I picked this group because it is quiet, and the topic seemed applicable. If you *must* do automatic flash sessions, schedule them as seldom as possible. Do not call up every hour just on the off chance somebody may have posted something. For most people the wait for connection time is really NOT worth clogging the web with worthless flash sessions. One thing is for sure. The web *cannot* take it if ALL of America goes online at once. Show some courtesy to everybody else by using the web only when you *need* it. When you are on a web page with a bunch of links in front of you, carefully review all the available information *before* you select a link. When that triangle is turning around you are part of the web traffic problem. If you have a web page, put fancy graphics, bells and whistles off in a side link, *not* on the entry link. Keep the entry page especially small, and other pages as small as possible. Think of a link as a line and a web page as a paragraph. You will then understand how to divide the page contents.

I want to stop the *manipulation* of markets by what I call the "power elite". Do you remember the junk bond scandals ? Well that wasn't even a start on the problem, and what we have today is far worse. The problem is *corrupt* speculators protected by corrupt government, which is in turn funded by the *corrupt* speculators. The news media is paid off by and pimps for both, except when it is outright owned/controlled. I am going to focus my efforts on market manipulation. The rest of you can help by doing your own checking or by working on corrupt government. In case you misunderstand (bunch of idiots) I am NOT attacking the wealthy or the capitalist system since I fully intend to be a filthy rich capitalist someday myself. As things are now, that is possible only if an innovator can partner with one of the rare honest businessmen or is willing to compromise principles and let a crook in on the deal. It is barely possible (don't hold your breath) that this government might be willing to do something about the problem. But recall the junk bonds again, cases drag on for years before the crooks are behind bars. I want to smash them NOW where it really counts - in their wallets. If you are one of the people at the edge of this problem, do your own risk assessment based on your personal situation. Contact the Reform Party or the justice department (or both) if you think you can cut a deal.

Do you recall the DOW 8000 with people telling you it could go higher (and it did) ? Do you recall how at the peak they panicked you by saying it should be much lower ? Do you recall at the crash last Monday how you were told it would fall to 6000 due to a slowing economy, currency instability, and continuing inflationary pressures ? Did you notice how Hong Kong crashed so conveniently while the Chinese were here ? To the American people I point out that after that big fall yet again in Hong Kong today you were supposed to panic, with a market whose total value is measured in billions wagging markets worth trillions. Are there any more wolves out there willing to take off your fleecy disguise ? Would you investors rather be predators, or prey ? I call upon you to contact the President and Congress with stories telling how the market hurt you. To the media I say again, why are you pimps ? At least ONE of you could have been the dog that barked in the night.

In 1982 there was a small oil well wireline logging company named NL Industries/McCullough. I call upon all the oil industry to tell why Schlumberger is so successful.

In 1986 there was a growing Fortune 500 computer manufacturer called Datapoint which made the only token passing star topology networks because it held the patents on the technology. It had an installed Fortune 500 customer base of thousands of networks and tens of thousands of computers. It had problems with stock manipulation by insiders, but it also had a very fat product research pipeline about to start flowing very serious competition into the market based on the Intel microprocessors. It was taken over by an arbitrageur named Asher Edelman, who fired all the people needed to keep the company alive and prospering. The company is now effectively dead. I call upon the government to determine what role major computer system manufacturers (I do not know enough to name them) played in this destruction of competition. I call upon the thousands of other former employees and the customers of Datapoint to tell Congress and the President how you too suffered.

I call upon all the former employees and customers of Atari to tell how the Atari ST was exterminated.

In 1986 there was a computer called the Commodore Amiga 1000 manufactured by Commodore Business Machines. It used the Motorola 68000 microprocessor and could have up to 8 megabytes of memory. It had an open operating system called Workbench, AmigaDOS, and Intuition. It had the ONLY Genlock for connecting a VCR to a computer. It also did audio sampling. It was a true multitasking machine, with multiple programs able to run in different windows *simultaneously*. There were a few hundred to a few thousand third party vendors making Amiga compatible products as the popularity of the machine increased. Several later machines were produced, but CBM was systematically strangled in spite of the loyalty of millions of customers around the world, who are loyal TO THIS DAY. When the bankrupt company was purchased, its new owners were strangled too. I now ask the current owners Gateway 2000 whether it is your intention to kill the Amiga forever, or will you let yourself be strangled as well ? In 1986 Freedom Computing Publications Hotdisk was my feeble attempt to start a third party business. It never got off the ground due to my ineptness and lack of capital. But not long afterwards others took up the idea which I freely offered, with the consequence that computer diskette publishing is a thriving industry. I call upon millions around the world to tell what you think of the IBM/ Intel/ Microsoft troika.

I call upon every single person in America who has no job and no unemployment compensation to contact your government asking why you are not counted in the government statistic for unemployment.

I call upon every person in America who had to change a job because yours moved overseas to contact your government.

Congress - you have Bill Gates in front of you today. Do you have the guts to ask him if there is anything he would like to confess ? If you want to ask me anything, post your question on newsgroup misc.invest.martketplace so that all America can see it. I am sure that they too would be interested in the answers. Information is the lifeblood of our modern economy. I call upon America to tell Congress that regulating and restricting data security is like slashing America's wrists.

I ask the thousands of recruiters who have never passed me on for an interview during the past seven years - Is it really because you instinctively dislike me ? Is it because I demanded "interesting work, reasonable compensation, a comfortable office, and no hassle" ? Or is there some other reason one of you would like to bring into the light of day ? Do not email me, post it on this newsgroup. I doubt that you will suffer any retaliation.

Twenty thousand hours of computer strategy game playing ought to be worth something. An avalanche can start with a single pebble. Am I still "mostly harmless" ? Do not invade my privacy. Not a one of you has earned it until you clean up America.

All opinions are mine. See previous disclaimers/warnings. Posted about 1:30 AM CST.

No Guarantee, No Warranty, No Liability, Don't Hassle Me

Sincerely, Lonnie C. Clay- TC5526@aol.com

Has anyone attempted to order this from ICD? For me, they don't answer their e-mail.

I want to purchase a ZIP drive and update to a compatible hard disk driver. Apparently ICD doesn't want my business anymore (having used 6.0.8 for years).

Is Uwe Seimet's driver available in North America?

>
> Even CAB 2.5d (latest commercial update) don't ! A pity !
As far as I remember, it's the job of the overlay (cab.ovl) to handle all
authorization stuff. So if doesn't work, it's more likely the .ovl which
is buggy, which also explains why it doesn't make any difference which
version of CAB is being used.

Ciao

>
>If any one knows how to configure HSModem please let me know.

You mean Serial 2 or Modem 2? You will need SCC.PRG for Serial 2.

You do not set the speed in HSMODEM - this just makes the speed
potentially available.

Use MODEM.CPX or SERIAL.CPX to set the working speed. SERIAL is the
more modern - you can actually set the speed you intend. With MODEM
you have to set to the speeds which the software has hi-jacked i.e. if
you want 115k2 you have to set 150!!

If you ARE using Serial 2 and will be using STiNG don't forget to set
LANBIT to ON.

If you want to play with Wensuite then you are recommended to have the
serial buffers at least 4096 bytes long.

GEM Fans,

There is a company which has created a new browser for Windows called Opera that is less than 1 meg and has full support for all of the features found in Browsers like Netscape. They are holding an email campaign to find out which other platforms they will make their program available for. Check out the site, evaluate the information, they sell the program for $35.00(US) Check it out, then send mail to them stating that you want Opera on GEM systems.

The problem seems to be that some MUD's require half duplex rather
than full duplex. Worse they are not real Telnet clients, as they are
SUPPOSED to negotiate echoing, but don't. I can easily put in an optional
echo in TelVT102, but since I have no access to any MUDs, and wouldn't
know how to use one if I did, Ican only do it if someone is willing to
work closely with me, to test what I do and give me detailed bug reports.
In my latest beta, I have a menu entry for echo on or off, but have no
way to test it or check it out. It should be rather simple. Putting in a
separate box COULD be done, but I need more info.
TelVT102 should work for any MUD that has full duplex.
It probably could be easily set up to use the "Info" line at the top of
the page as a single-line typing buffer.

Howdy All

I need all and any info on CD Recording software for the Falcon. I know that there are bout 2 programs available. One is from It's All Relative called CD-Recorder 1.0, I emailed them but they still haven't responded. The other one(s) were an from add in the latest Atari Computing. I can't remeber which company(one of the UK ones of course), but I remember the it was over 200pounds!! Which if I bought it from them it would cost me over $400 Canadian. I think they also offered a "lite" version. I can't remember and I don't have the magazine with me. Do any of you know of an FAQ reguarding this? I need as much info as possible. My Falcon has 14megs,math co, and has the Power Up accelator installed.

Thanks for all your help.
Chris

> Problem is that when I try to start Cubase I get the message
> "not enough memory". Is there something in the HD I must config
> to be able to use it?
>

It sounds to me like the HD is set up as a boot disk and might be loading accessories or auto programs that take up too much memory on your little 1 Meg machine. Cubase 2.0 really needs at least a 2Meg machine. On a 1040, it will run, but you'll have to deactivate ALL the nice little accessories and auto programs you don't need. Even then you'll have to do without a few extra functions.

To do that, check out ALL the .acc files and rename them to .acx, then go into the auto folder and rename ALL the .prg files to .prx (except of course the ahdi.prg or whatever HD driver is set up), then reboot.

Hope this helps

Could be a paper size problem. European countries use 'ISO A4' whereas
the USA uses mostly 'US Letter'. A4 is longer than USLetter by around
2cm. Check out the settings in both WPs.
```

In article <63oijs$mnt@nntp02.primenet.com>,
pmorales@primenet.com (Pat & Anna) writes on PPP problems :

> Port (SER2/LAN)
> Dropped:
> Send: 7280 bytes
> Received: 0 bytes

So Ping packets are sent, but indeed never return (It's not that they're
lost somewhere by the PPP code, as clearly they haven't been received in
the first place.

> Okay, so you're going to tell me that the received IP is wrong and,
> therefore, no data is coming back. Why???

Not really, as you already double-checked before.

"Why" is a good question. I have no answer at the moment. If you got a decent
ISP, you might be able to talk them into watching their side of the connection
while you're trying a ping. ISPs doing reasonable customer support do this,
and they definitely have the means to tell precisely what goes wrong.

Symptoms are that ICMP Echo Requests (Ping) are sent, and no ICMP Echo Replies
come back. Basically what can be wrong is :

- The request is not received and/or forwarded to the machine that was to be
pinged. That can very well be due to wrong settings by your ISP, like doing
(expecting) compression while none was negotiated (The Trumpet Winsock issue)
or similar things.

- The request reaches the destination host, but it is down, or the destination
does not exist at all. This should never be the case for the ISP's name
server, since if that one is down, virtually nothing works anymore, even for
the ISP people themselves.

- The destination host issues a reply, but the reply is bound for a wrong host.
The right host would be your Atari with STinG, but if STinG had the wrong
IP address, the reply would go to the machine that normally has that address.
I said above that I do not really think this is the culprit.

- The reply arrives at the ISP's modem server, but does not (properly) forward
it to your machine. Again the reasons for this can be all the same as in the
first case ("The request is not received ..."). Again only the ISP can find
out what is wrong, let alone cure it.

So it definitely looks as contacting the ISP is the best bet here.

Why should you attempt to set the port speed via the setter.ttp. That is
not a HSMODEM internal variable. Get a decent port configurer, like the
"Serial Setter" CPX that can be found on my web pages.

> without Magic v4 and this "memory block destroyed by user" problem
> went away

No wonder, single-TOS does not report this, it does not even check if
the memory structures are still consistent. So the error is still there,
just hidden.

> - doc.htm now displays OK. Hmm .. v1.70 will display OK WITH
> Magic so I guess oxo has changed its memory management in v2.x in some
> way which disturbs Magic v4. I will need some more work to track this
> down.

Good idea, please do so, and notify the authors. MagiC's memory system
is absolutely complying to the specs set by Atari, but it uses a different
system internally. So if your first suspicion turns out to be right, you've
proven that OXO does not stick to proper programming, in that case Wensuite
should be avoided altogether, regardless of how well it SEEMS to work.

Good. Make another step and everybody will be satisfied. Mind you : We're
writing plain text here, decorative ASCII-graphics serve no purpose. Realize
that and get rid of another two lines. Next, note that very few people will
not ignore the stuff describing your system. It's obsolete, if it's ignored.
The few actually reading it either laugh at you because they have superior
hardware, or call you a braggart because their's is inferior. Realize that
and get rid of another two lines. Now you're at the four lines everybody
including the netiquette asks for, and everybody will be happy.

That's what I'm talking about. In your impressive list you have several programs
that are absolutely stable, say, under MagiC. The mere fact that occasionly you
have to kill them because they unexplicably hang, says enough about MultiTOS.

Do you like integrated applications, with no chance of picking the best client
for your purposes ? I don't.

> so there isn't realy a need for
> using STiNG, if they can get their own code to work.... ;-)

You're not asking much from the Internet, are you ? Gee, Internet would be
boring if there were only Mail, News and Web. ;-) What about FTP ?? What
about Telnet (if only for playing MUDs) ?? What about printer and time
services ?? What about the dozens other services available on many hosts ?

Integrating the TCP/IP stack into an application is pure nonsense.

The secret of Usenet which you seem to not have understood is expressing all
that with the contents of the messages, not the signature. Mind you, with the
contents you can display individuality, self-expression, charisma once again
each time you write a message. Everybody however can have a "nice" footer, he
only needs to ask his charismatic friend.

> Now, doesn't my message look -so- much better...? :(

No it doesn't, but that is not due to the lack of a footer, but the lack of
sensible writing. That one only contained crap.

MUDs often work from different ports than the well-known Telnet port 23. The
german UNItopia for instance uses port 3333. So when choosing the host in the
OPEN SESSION dialog make sure you type in the right port number. In TelStar,
click the host edit field, and you can select UNItopia and give it a try.

IIRC they moved recently, so I cannot guarantee that the address is still
alright.

Can anyone give me any advice about setting up the GNU C++ compiler on the ST?. Although I am not new to the Atari platform I am new to c++ programming and the Unix style shell-oriented type of procedure required.

Thank you

Ross

>as Duke Nukem would say.
>
according to the magazine's editor, Howard Carson, Current Notes
has suspended publishing due to a number of factors, including Toad
Computers (the biggest advertiser) pulling out as a major advertiser
(Toad also reputedly owes for some previous ads as well, for which they
have refused to pay).

Howard also was facing major burnout as a result of working with MGI as
the main promotor of Calamus, having to practically run TAF by himself
in the last year (thanks to the last executive leaving the platform and
leaving Howard to handle most of TAF's affairs - I can attest that just
the VP's job is taxing enough!) AND having to lay out and proofread CN.
A few things just had to give, and Current Notes just happened to
unfortunately be one of them.

As the former News Editor for CN, I am quite naturally just as
upset about this turn of affairs as you all are, and in some ways feel
like I was left in the dark as to the magazine's ultimate fate. I
certainly wish I could have taken over the magazine myself and kept
carrying on with it. We at TAF only finally gotten an official response
on this matter from Howard a few weeks ago from his own mouth at the
last TAF meeting.

Look no further. This is information only. Just because it worked for me, it may not work for you. I have a SF354 floppy drive (SS) and decided to mess around with it. I bought a new 1.44 Floppy drive for the PC at a local computer store. The model# is Mitsumi D359t7. Its just a standard floppy that comes with no box. I noticed that it had two prongs for a jumper and I have read that the Atari ST must see the floppy drive as drive 1. The default to a IBM comp. drive is 0. I placed a jumper on the drive and hooked it up to the existing hook-ups in the SF354 case AND?? It worked like a charm. Although the Atari can not format to 1.44, its a great DD drive for the 520ST and 1040ST users.

1987. Current Notes?

Source record: 114134

Just for fun I decided to download a demo from ftp.lip6.fr called dragonel.lzh. I unlzhed it and got a file called dragonel.dim. I assume this must be some sort of disk image. Does anybody know what program will handle .dim files? Also, does anybody know if this demo will work on a standard 1 meg Atari ST?

While I am on the subject of demos, can anybody recommend some really good ST demos? I am interested in checking-out some of those demos that do a bit more than scroll greeting messages across the screen and make balls wiz around at incredible speeds.

Ted

: >see what you're typing and the scrolling text does not confuse you as
: >you're typing. Is there such a programme for our platform, or can
: >AtarIRC be altered slightly to be used for MUD games as discribed?

Oh yes there is!
You'll have to install Mint-Net to get it working however.
It is called Tiny Fugue, and it is a MUD/MUSH/MUCK client.
The Atari compiled version will run in VT52 mode...so it's not windows
and stuff like that...but it is a very fine gaming client wich will allow
you to split the screen, and much more!

An alternative to this...
If you have a true unix or VMS shell account of which you can dial in
using your favorite ANSI or VT100 terminal, you might find they have a
gaming client already installed for you to use. If not, ask if they mind
your setting one up, or if they will set one up for you. Next, you simply
ftp TINY FUGE source and compile it for your providers machine and OS
type. Do ask the system administrator first!

Brian

Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

1994. Publically available Newsgroups?

Newsgroup: comp.sys.atari.st
Date: 1997-11-06 00:00:00 UTC
From: bdc2@po.cwru.edu
Message-ID: <63t3oq$q95@alexander.INS.CWRU.Edu>
Source record: 113890

Does anyone know of any GOOD publically accessable newsgroups?
My university provider is having a mess keeping csas and others up to date.
I have been able to use news.uni-stuttgart.de at times, but being overseas
is often slow, and doesn't seem to permit posting. My own, allows posting, but
is often a day or two late in getting things posted. Many news servers
are tied to their system, and only allow access if you are on their line.

Anyone know any alternatives I can try?

Boris

1995. Re: Using CAB v1.5 with Passwords

>he got an agreement with ASH? Regardless, you would think that they
>should provide a more advanced overlay file considering the number of
>improvements that have gone into CAB itself.

They don't ship it with the PD overlay. They ship it with PPP-Connect as the included TCP/IP stack with its own overlay. Trouble is that PPP-Connect doesn't provide STiK standard sockets. Or MiNTnet standard sockets either for that matter, which is the other Atari standard (OK so these are the closest we have to standards, and MiNTnet supports STiK sockets via GlueSTiK).

Anyway, PPP-Connect only has one client available at present (CAB) but you can use the OVLs for STiK/STinG or MiNTnet instead, if you want to use one of those stacks and run all your chosen clients with it.

Judging by the info on the CAB about:plugins internal page, the PPP-Connect OVL is possibly more advanced in that it says it supports NNTP, though CAB doesn't as it doesn't recognise news: links for use internally (I tried...). It's quite happy to call Newsie though, but of course that won't work with PPP-C...

Rumour has it that ASH recently demo'd mail/news clients for PPP-C at a German show. Lord knows when they'll emerge and that will still leave an absence of Telnet, FTP etc etc as others have pointed out here. Add the fact that PPP-C just does dial-up PPP/SLIP, ie no routing via other ports etc like STinG or MiNTnet (so you can't create networks with it), and it seems a bit limited compared to the opposition. Why they couldn't either licence the PD stuff or write a proprietary stack which stuck to STiK/STinG standards is beyond me.

What we really need to make PPP-C viable is a GlueSTiK equivalent which will sit on top of PPP-C and provide proper STiK sockets.

TTFN
John

>And WHAT, there is nothing more annoying that a half finished Usenet
>item, with or without a SIG!

The last line was "Dalnet.". That's an Oasis 1.35 known bug, it doesn't let you see the last line of any post or email (the line is still present in the message base). I don't have a good and easy solution for this one, other than to not unbatch automatically, but after an online session edit batch.txt and add an empty line at the end of each article not having one. Then only unbatch manually by the online menu item. And of course when I post I add an empty line at the end of my messages, to not annoy my Oasis using readers (it's generally automatically done by Oasis).

Bye! Bruno.

I would be in favour of including basic stats.

How many times do we see a message asking for assistance which does
not even contain the most basic information? This means we have to go
through an exchange to get some of the vital info.

I think, h/w model, RAM, O/S in the sig. would assist responders to
give an appropriate answer. I know that MORE info. may be required but
this would be a good start and, in many cases, would be sufficient.

>Stupid. Okay. Thank you for that insight.

Was in a bad mood, excuse me please...

>BTW, its not my fault that "newbies" don't know to to reply correctly.
>Why don't you correct them instead of me? :)

Well I sometimes do it when I have time. Generally by email,
generally politly, as a given information and not as a flame. Generally
I have a "thank you, I didn't know" reply (well I had also 2 or 3 times
insults, but who cares, I never reply to insults). I wrote you 3 times
about your huge sig.

>Hmm...I honestly don't remember any messages like that, although its
>easily possible-I get quite a few messages.

Let's say bad servers loosed the mail and posts, it's quite
possible.

>>PS2: Even your sig separator is false (known Oasis bug): it should be
>> "-- " (minus minus space) and not 2 underscores.
>AND a known bug with Oasis is my fault? You're right-guess I should
>have reprogrammed Oasis ages ago! <smile>

:) You're right. But there is a possible patch, edit OASIS.PRG with
a binary editor, search and replace twice "__" by "--". That doesn't add
the final space, but it's better than nothing. More info about Oasis
patches in article <853354824_OASIS_@nordnet.fr>.

Or you could use a much better and more RFC compliant newsreader,
Okami 1.29 comes to mind as it can be run on top of NOS like Oasis.

>How about lets just drop it, okay? I really dislike arguing with other
>Atari users, and after all--I changed my .SIG over 2 days ago... :)

To an 8 lines one, 2 times more than allowed by Usenet rules... Well
if you really can't live without it, I'm OK to drop the attack, but the
world would be so much better if everyone (at least experienced users
like you) could read RFC 1855 or some other Usenet guidelines like the
many posted to news.announce.newusers and understand the underlying
reasons of the rules...

When there are no technical reasons for some rules, it's generally
just a matter of respect for your readers, and of course a matter of
ability to think that some behaviours could annoy some of them...

- Why you should not use a newsreader not adding proper references?
Because it annoys many of your readers, they loose threads.

- Why you should not multipost?
Because it wastes bandwith and disc space on thousands servers.

- Why you should post less than 75 chars lines?
Because more annoys your readers reading on a small screen.

- Why you should not post sigs longer than 4 lines?
Because... hum, I don't remember.

- Etc... etc... etc...

Bye! Bruno.

2006. USR faxreceiving on the BBS

Newsgroup: comp.sys.atari.st
Date: 1997-11-06 00:00:00 UTC
From: mike@bbsgate.interware.REMOVE.TO.REPLY.it
Message-ID: <8247_mike@bbsgate.interware.REMOVE.TO.REPLY.it>
Source record: 113902

I am still looking to find a way to receive faxes on my BBS with a USR Sportster voice (the computer is an Atari). Faxreceiving was good with a ZyXEL U1496E+ but when I changed to go for 33.6 I had no success. All ZyXEL are fax class 2 while all USR are class 2.0 but this should not be a problem

Faxes are received correctly when using a standalone fax program, the problem is when the BBS detects a fax call incoming (+FCON) and passes the control to the faxreceiver software, I tryed many of them unsuccesfully, most of the times the line is immediately dropped when the faxreceiver is started, I tryed setting any sort of parameters and fax software but nothing.

Is there any setting in the modem to let it wait a bit after +FCON (this may be the problem) or other things I am not aware ?

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

> Why? Does anyone else have this problem?

Presumably you're using Freedom? This is a problem with Freedom which occurs with quite a few programs; because they expect a modal fileselector, i.e., everything else stops when the fileselector is on screen, so in other words they don't expect to be receiving any window redraw messages from the system while they are waiting for a response from the fileselector, so any such messages will be ignored until after the fileselector is closed.

Because Freedom is a non-modal selector, it is possible that the system might remove a window from the screen and send the application a message to redraw it whilst the fileselector is on-screen. But it won't get redrawn until you close Freedom (unless the application has allowed for that possibility).

2012. Should I re-format?

Newsgroup: comp.sys.atari.st
Date: 1997-11-06 00:00:00 UTC
From: michael@fastlane.net
Message-ID: <63rd50$16v@news.cybernews.net>
Source record: 114002

Hi all,

I recently received my Falcon MK-X with an internal IDE drive.
The hard disk driver is AHDI, and I've noticed disk transfers are
painfully slow. Slower than on my Mega STe with an ICD AdSCSI+.
Even if I boot with the ICD driver, the performance does not
increase significantly. Also, there seems to be a significant
amount of "lost" space. More so than on my Mega, which uses an
8 K cluster.

So my question is: should I re-format the drive, and specifying a
different sector/cluster size? I don't know
what the current sector/cluster size is. Is there any possibility
I may damage it? I've reformatted SCSI drives a number of times, but
I seem to remember a discussion a while back about possibly damaging
an IDE drive my reformatting it.

Any input is appreciated.
Thanks in advance,

Michael White (michael@fastlane.net)

Dave Gostl wrote:

> (Dr. Uwe, will they have ver 7?)

They can order it from System Solutions. The English version of HDDRIVER
is distributed by System Solutions in England. Those who distribute
HDDRIVER abroad (i. e. not in England) always get it directly from
System Solutions.

It's included for those who want to format MFM or RLL drives (Atari
SH/Megafile) with HDX.

That reminds me .... another niggle with Wensuite is that it will not use the port selected by SERIAL.CPX. It will only find ports selected by MODEM.CPX. Semper and Connect work fine with SERIAL.

I'm surprised to hear that the commercial version of CAB ships with the public domain overlay. I would have thought Dan would have objected. Has he got an agreement with ASH? Regardless, you would think that they should provide a more advanced overlay file considering the number of improvements that have gone into CAB itself.

Michael

2022. FS/T: Atari ST software [11/06/97] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1997-11-06 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <346909b4.2860329@nntp.ix.netcom.com>
Source record: 114012

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/06/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

I've seen so many others post hardware stats. that I thought it was okay.
In fact, I like reading about others hardware. It makes me feel good to
see Atari users modifying their systems, upgrading and keeping up with the
latest innovations.

Individuality is dead. Self-expression is a thing of the past. Radical
thoughts/ideas are to be suppressed. Gosh, I really like this NG... :)

I sincerely hope that everyone who has responded to my initial post is
spending as much time notifying all the -other- "more than 4 lines" users
about the errors of their ways... I've not seen one post directed at these
users... I guess everyone's too busy with me... <grin>

"and everybody will be happy." Everybody but me... :(

--a good explanantion snipped here for the purposes of brevity--

I am still not quite sure why you ask for that info (IPaddress, Gateway)
if it is not needed (i.e. the default being 0.0.0.0).
I thought I needed the Gateway as I *do not* dial up an ISP!
I dial into the network at work (through my modem to their modem)and
through
that connection out again through yet another modem to the ISP that my
work network uses for Internet access. Using a Gateway seemed to make
sense,
and since through WinSock I _had_ to have a Gateway listed in order to
connect to the Internet(via work) when calling from home back in the
days
when I used to use a 386DX running Win3.11, I assumed I'd need a Gateway
for STing to use also.
I am still not clear on this, but the rest of your explanantion of
addresses
was most appreciated. thanks.danke

Message-ID: <63ss6m$su8@alexander.INS.CWRU.Edu>
Source record: 114019

I just downloaded WenSuite 2.25e_f and I can get to the piont
where it shows my IP Address. At that point nothing happens.
The ppp link window stays on and IP Address stays on in the window.
I've tried closing the window manually and try for a URL and get
an error message and 'no file found' displayed on the page.
Obviously I'm not connected even though it looks like it's going
through the process. I'm using HSmodem and the program supplied
in the auto folder that came with wensuite on my atari falcon.
Has anyone had this problem and solved it?

Thanks...Ron Lukawitski

Not according to rfc 854 which states:

Although a TELNET connection through the network is intrinsically
full duplex, the NVT is to be viewed as a half-duplex device
operating in a line-buffered mode. That is, unless and until
options are negotiated to the contrary, the following default
conditions pertain to the transmission of data over the TELNET
connection:

which I interpret as half duplex mode is used unless negotiated, if
you also read a few lines up in the rfc it also states that no host
has to negotiate to use a full duplex connection.
As half-duplex is the standard mode until negotiation takes place then
there is nothing wrong with what MUD's do, its the telnet client the
user is using that should alter its mode in line with what the MUD
wants.

This is exactly what Telstar does, without problems for me on all
MUD's/Mush's etc that I have tried it on.

It doesn't!

The only OVL included is the one particular to PPP-Connect. You still
have to get your own "Dan" .OVL if you are using STiK/STinG to
connect.

>Regardless, you would think that they
>should provide a more advanced overlay file considering the number of
>improvements that have gone into CAB itself.

I've yet to try the provided overlay with I-Connect. It is to be hoped
it will cope with authorisation/passwords.

Apart from this omission the combo. STinG/CAB2.5/"Dan" v1.2618 .OVL
works fine.

Nostrodamus phrophesised this from bdc2@po.CWRU.Edu to All...

Hi Boris!

b> About a year ago there appeared an HP660C driver (dj660c.zip)
That sounds like the SpeedoGDOS driver as released by Epson France.

b> Does anyone out there know of the program, the authors or the
b> translator??
Only that, I'm afraid.

b> I desperately need something for my HP dj672C, since NVDI seems to
b> have some problems with this printer. (NVDI 4.11 r3)
If it uses the same control codes as the 550 then you shouldn't really have much difficulty, I edited the 550C driver to include the control codes for 600dpi B&W printing (got those from one of the laserjet drivers). Also I'm not certain that you can reliably mix and match Speedo drivers with NVDI, and in any case that version is way out of date, it's up to r9 ATM.

Same list of printers as before but the page and prnsys drivers are different.

Speak to 'ya later!

Bruno, thank you for that post. It was coherent, and offered reasonable alternatives, as well as raising valid points. Messages like that (even though slightly critical-at least its constructive) are a pleasure for me to read. I still think that in todays 'Net, with 28800 modems, News readers like Newsie (that let you select messages to d/l) and ISPs that offer unlimited time/flat rates, that the issue of an 8-line .SIG is a little mute... If most of us were using 2400 baud modems, and paying through the teeth (boy, do I remember my old GEnie bills!) and had slow software to boot, then I would agree... This is, of course, just my humble opinion... See ya 'round CyberSpace, Bruno! :)

No Telnet client is supposed to negotiate echoing. Echo is an option that
may well be rejected by any side of the connection, so there is no reason
to call MUDs non-compliant to the Telnet protocol.

Hello Atari users,

We are currently using HD Driver 6 on our Falcon 030 here in the US.
And it has greatly increased the performance of all our hard drives and
solved all the problems we where having with the older Atari drivers.
Now we hear of an HD Driver 7? And want to know how we can upgrade to
the latest version and what are the improvements over version 6.
Also are there any lists of what SCSI, IDE, and EIDE hard drives that
work well with HD Driver 6 and higher versions?

If not, try a different harddisk driver. There are some that consume quite
a bit of memory. Late versions of CBHD are an example.

What you call 'brilliant' here is actually ancient computer history. The Telnet protocol has been designed with really old hardware in mind. The most basic hardware the Telnet protocol is supposed to work with is a keyboard and a line printer (no screen !). The modus operandi of such a beast is that you type a whole line which then is sent as a unit to the host the "terminal" is connected to. The first thing any modern telnet implementation will negotiate with the host is the use of character-at-a-time mode instead of that ancient line-at-a-time mode (In TelStar you can observe that by watching the window info line, the status is displayed there) so that the cursor can roam the screen freely.

Incidentally, it occured to MUD designers that this old Telnet modus is indeed a good choice for MUDs, as those spew text lines about at any time while the user types in his line. Unfortunately, Telnet programmer seldomly bother to implement a sophisticated line-at-a-time mode, as it is not used anymore nowadays (for Telnet to a shell on a host sessions).

One day I might put that into TelStar, I don't know. But certainly not all to soon.

I believe you mean SoundPool's CDRecorder.
Previously (when it was version 1.x) they sold one version with only audio burning and one with both audio and data burning, but they're no longer separated since version 2.x (not from SoundPool anyway). They're sold as a package - even though there is a separate audio burning program to make things simpler when you just want to burn audio CD's. For the moment the version is 2.18 and you can even burn a SCSI-copy, which means that you take any SCSI-harddisk, connect it to the Falcon and tell CDRecorder to copy it to a CD. This is the way you have to make CD's that should be usable with samplers (I've tried it with my Kurzweil K2000's harddisk and the CD that was created worked perfectly with the sampler).
Here in Sweden, the current price is SEK2000.
If you need more information, just ask me.

Best regards,
Claes

>Uwe Seimet suggested using clockpatch.prg to fix the bug. I want to thank
>him for his help.

Hi there,
As everyone else have already told you, the CPU clockpatch is a hardware fix
and is needed because the clock pulses to the CPU aren't clean enough to
give you a proper functionality.
This problem shows up mostly in Cubase Audio with crackling and pops in the
recordings, or as problems on the SCSI-port.

Read all about it on my homepage - troubleshooting section.
You'll find various tips, as well as three different clock patches. If
you're experienced with a soldering pen, it's no problem at all doing the
modifications, but if you're not experienced - don't even think about it
because you have a BIG risk of damaging your motherboard beyond repair...

> into the proper res right when I click on it? Thanks. -Satcom2

It's up to the program itself to set it's own resolution, if it needs
a special one. The reason why many programs doesn't do this is that it
want to make sure that the desktop is still correct after the program
has exited. Other programmers are just too lazy, or ignorant.

I have never seen such a program, but I like the idea. The only way I
see this possible is to patch the routine in the desktop that starts
the program, and have a list on program names and resolutions to
set. Or perhaps suggest it to replacement desktop developers, like
Thing.

Tomas

According to a recent e-mail from Nima (HOMA SYSTEM HOUSE), there is an update to PhotoLine available. The new version is 2.3. Nima said that he would have it on his website in the near future.

More like the other way round, STTOOLS does not work to well on large disks
(256 Meg partitions), while I've never had problems with CHKDKS3.

Have a look at the current demo version and the HDDRIVER news on my WWW
pages: http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html.

> Also are there any lists of what SCSI, IDE, and EIDE hard drives that
> work well with HD Driver 6 and higher versions?

There is no list because there are no drives that don't work. HDDRIVER
is compliant to the IDE and SCSI-2 standards and this automatically
means that any IDE/EIDE and SCSI/SCSI-2 drive works.

You could also try using CD recording software for Linux68k.
There seems to be some CDR software available for PC-Linux
which should also work on a Falcon running Linux68k.

2071. SpeedoGDOS disk 1

Newsgroup: comp.sys.atari.st
Date: 1997-11-07 00:00:00 UTC
From: lvzon@bio.vu.nl
Message-ID: <63v0eu$208@balaena.bio.vu.nl>
Source record: 113927

About four years ago I bought an Atari Falcon 030 at, even at the time,
one of the few remaining Atari dealers in the Netherlands.
All went well and the ting arrived neatly at my home the next day.
Unfortunately, as I discovered about half a year later, after I'd bought a
second hand SCSI harddisk and wanted to install some software, one of the
Speedo GDOS installation disks was missing from the packet of disks I
received with my Falcon. So I called my Atari dealer, which had
dropped Atari and was now dealing in PC's only, and asked if I could get the
disk somewhere. They said they'd send it to me. Nothing happened.
Three years and a lot of telephone calls ("Sorry, we can't help you
anymore") later, I still haven't got my Speedo Installation disk 1.
And I didn't need it, until now, coz' I have to test some routines
I wrote for an Art program I'm working on.

So here's my question: Could someone send me the contents of Speedo
Installation disk 1 (which came with most Falcons) as an MSA archive or
whatever? I already have disk 2 , and I should have had disk 1 as well,
so it's perfecty legal. I'd be very grateful if someone could help me out.
Thanks...

Thanks to the 3 of you.

Can I stress please any any commitments to buy this ST-Guide hypertext file of my Atari A - Z book must be made via email or netmail.

I do not normally frequent this group (although I am in tech and programmer). Also I do not have a reliable newsnet source (who does?) and I never saw the original messages quoted above from Xav and Jos.

Thanks Odd for the quotes :-)

If you have made a promise to buy here and haven't also done so by email or netmail then please do so now.

The response so far has been poor and the project is unlikely to go ahead unless I get some more feedback.

Thanks

From: rcain@zetnet.co.uk
Message-ID: <63vo68qks2@roch.zetnet.co.uk>
Source record: 113932

I set up CAB 2.5 with Connect today so that I could use the IConnect OVL.

I'm sorry to say that this .OVL also does NOT support authorisation. I attempted to load my "problem pages" of, believe it or not, the Minsk Economic News and it got even less far than Dan's .OVL for STiK/STinG. Dan's, at least, asks you to enter authorisation details, the IConnect OVL does not even get this far.

So .. just one more .OVL to go! I'm not setting up MiNT just for this so is there anyone out there who knows if the MiNT .OVL supports authorisation?

This is not exactly hot news. It's common knowledge that a PC drive can
replace an ST drive mechanism. With a little hardware modification, you
can even make your ST use the 1.44M HD mode (check out Hallvard
Tangeraas' home page for details).

Just as a side note: did you also set a jumper on the drive for media
change (or disk detect or whatever it's called). Without it, the ST will
not notice if you swap disks and can mess up the data quite seriously
(let's say permanently trash all the files for example). I have a
Mitsumi drive and am unable to set that jumper (as there are no jumpers
on the one I have), so I know :-(

Hello again,

I'm going to really start publicing ICTARI properly now.

For those who don't know, ICTARI is a disk-zine / user group
for Atari programmers. You can read, download and contribute
to the zine on the WEB:

http://www.elis.demon.co.uk/ictari/ictari.htm

If you know any keen programmers not on the 'net, I'd be
grateful if you could print this out and give them a copy.
Why not take it to your local user group meeting ?

Thanks,
"Augeas"

useful programs for programmers etc, etc. The service itself is completely free, members send us a blank disk each month and the postage (or the cash equivalent) in return for next month's disk.

If you are an experienced Atari programmer, the group would very much value your programming expertise, however, this does not mean that we would expect you to provide programming articles, tips, etc, for each disk. If each member only contributes two articles a year we would have enough material to fill a disk each month, and if you decide to join the group we would hope that you could occasionally send in some contributions for the magazine. The sorts of material we try to publish are programming techniques, useful sub-routines, C functions, BASIC procedures, MACROs, etc, which would be of interest to other members. You may also be able to help other programmers with software problems and there may be other members who could help it you with a software problem that you have, after all, even experts don't always have it all the answers.

If you are a beginner to programming or are just starting to learn a new language we can probably help with any software problems you have as we often run tutorials on various languages and programming techniques. If you have any programming queries, please send them in (on disk if possible) so that other members can hopefully provide a soloution for you.

We trust that you will consider becoming a member of the group and provide some useful input to the magazine occaisionally. If you are interested perhaps you would fill in and return the enclosed questionnaire to us at the above address. To recieve the next issue you will also need to send a double sided disk together with two 2nd class stamps or 75p cash for each month. Please return these as soon as possible so that we can place you on our mailing list for the next issue which will be despatched about the 15th of the month. The questionnaire and latest issues are also available from the ICTARI WEB page. Cheques or postal orders should be made payable to Mr G. R. Greenway. Back issues are also available for 1UKP each.

If you decide not to become a member we would be grateful if you would pass this letter and questionnaire on to someone who may be interested.

We hope that you will agree to join the group, we are sure you will find something of interest on each disk and for just a few pence a month can you afford to miss out on the chance ? We look forward to hearing from you in the near future.

Ken Macdonald <macdonal@cfcsc.dnd.ca> writes:

> I am still not quite sure why you ask for that info (IPaddress, Gateway)
> if it is not needed (i.e. the default being 0.0.0.0).

The IP address is always. The gateway is only needed for (local) networks
using which you can reach more than one other machine directly. But the
routing table is a table, this means, if in some lines you need an extra
entry (gateway) you gotta add it for all lines, and fill it with some
dummy value in all lines where the entry is not needed.

> I thought I needed the Gateway as I *do not* dial up an ISP!

Whether the ISP is dialed up or a permanent serial connection does not matter
for routing issues. The only important thing is that it is a point to point
connection, i.e. a network with only two hosts, where no gateway is needed.

> I dial into the network at work (through my modem to their modem)and
> through
> that connection out again through yet another modem to the ISP that my
> work network uses for Internet access. Using a Gateway seemed to make
> sense,

No it doesn't. Your employer is your ISP. The whole point about gateways is
that they're the machine data is sent to if the data is bound for hosts that
are not directly accessible. On a serial connection, there is no choice, the
data has to go through the serial line, thus the whole idea of a gateway is
senseless in that case.

> and since through WinSock I _had_ to have a Gateway listed in order to

WinSock is trash. Even WinSock does not really need gateway entries for serial
connections. If it seems to, then that only adds to it's reputation.

Cheers Peter

>>
>
>Could be a paper size problem. European countries use 'ISO A4' whereas
>the USA uses mostly 'US Letter'. A4 is longer than USLetter by around
>2cm. Check out the settings in both WPs.

This is one issue. Papyrus default paper-size was US letter as shipped, I recall.

There are a number of conversion problems in RTF, partly due to the fact that there are numerous different (sub/superset) approaches to implementing RTF mappings with any given proprietary document format. There are even problems RTF-ing between different versions of MS-Word, not to mention between e.g. AmigaPro and Word.

Note also that Papyrus RTF export format is not identical to the (more complete) RTF the same program uses to write to the GEM clipboard. Missing in export are for example numbered lists.

Anyway, from Papyrus to Word6 I generally have to manually tweak the imported file in Word6 somewhat. How much depends on how intricate the paragraph formating was done, but it is not excessive for normal text.

From: Bo.XK.Leuf@trab.se
Message-ID: <EJAK7H.L7q@malmo.trab.se>
Source record: 113947

Just a quick congratulations!

I installed STiNG 1.08 PPP the other day on my Falcon, and everything worked flawlessly, from first connect to ping and trace, and now Newsie.

In truth, the setup is more stable than that ubiquitous Winsock for W3.1, which is nothing bad said about Trumpet Winsock -- trouble originates with MS Windows and Winsock does some rather amazing workarounds...

Thanks for good work.

/ Bo <bleuf@geocities.com>

Michael A. White wrote:

> So my question is: should I re-format the drive, and specifying a
> different sector/cluster size? I don't know

You can't change an IDE drives sector size with formatting the drive.
And you might even destroy your IDE drive by formatting it. As long as
there are no bad sectors formatting makes no sense at all anyway.

> I may damage it? I've reformatted SCSI drives a number of times, but

SCSI drives can be formatted without damaging them but also with SCSI
drives formatting only makes sense when bad sectors are reported. In any
other case partitioning is all you need in case you want to change
partition parameters like the cluster size or the _logical_ sector size.
Note, however, that these parameters usually depend on the partition
size. In some cases you can change these settings, like with current
versions of HDDRUTIL (->HDDRIVER). Here you can change the logical
sector size and this directly affects the cluster size.
But you won't gain any speed by changing these parameters.

> have to kill them because they unexplicably hang, says enough about MultiTOS.

I would say it the other way around. That says enough about the programs
which doesn't work. IF they can't work properly under MagiC or MultiTOS
they are badly programmed and buggy in the first place. I have _never_
found
a program that runs under MultiTOS that doesn't run under TOS (if it's
not
a program using the features found in MultiTOS and isn't present in
TOS).

If the program doesn't work as it should, put it in the trash there it
belongs.
I have done that a few times. They are not worth bothering with if you
ask me.

It's still not there. If they were just going to update it you should
still be able to access the directory, or?

Strange....

Hi,
Homa Systems House provides scanner drivers for:

UMAX ASTRA 1200S/VISTA S12, using ScanX.
Microtek ScanMaker E3/E6/35T+, using ScanX
HP series of scanners, using Nova SCan
Mustek SP II series, Using Nova Scan

All of the above are SCSI Scanners. They work on all ATARI computers,
running TOS/Magic/Geneva/MTOS: TT030, Falcon 030, Hades 040/060,
ST + ICD Hostadaptor.

For more information, please contact Homa systems House at:

http://www.magma.ca/~nima
aa414@freenet.carleton.ca
tel: 613-722-0901
fax: 613-722-9061

For distribution,
IN North America, direct from Homa Systems, or From ComputerDirect,
Systems For Tomorrow, ATY computers, ...
In UK, Contact Titan Designs
In Germany, Contact Falke Verlag
In France, Contact La Terre du Milieu

Best regards,
Nima Montaser

>fine. I don't know MagiC 4. Why not upgrade to 5? :-)

Oh, this is worrying :-(I also tried Wens with Magic v2 and got the
same "memory destroyed" crash.

Mmm, well, I suppose v5 MIGHT be a good idea but I've just been
spending money on CAB v2.5 so am not feeling very generous at the
moment.

Also, if I get the problem persistently, I may have a problem with
other AUTOs and ACCs so a v5 would not help things. The funny thing is
that Wens 1.70k works fine with Magic - it's just the v2.x which are
not happy. I suppose I should go through the nausea of multiple
re-loads with different AUTO/ACC :-((<Sigh>

Austin Walshe (ajwalshe@deakin.edu.au) wrote:
: Hi All,

: I am currently attempting to set up my TT modem port 2 to run at 28800
: bps (or higher?). I have set up HSModem7 but are having trouble
: configuring it using setter.ttp to obtain the higher transfer rate.
: Sketchy German documentation doesn't help!

: If any one knows how to configure HSModem please let me know.

: Thanks in advance.

: Austin Walshe

The following are settings I use with HSMODA07 on my TT030, TOS 3.06.
These settings are enfluenced in part by the use of STalker v 3.05,
CoNnect v 2.46, and Geneva v 1.0 rel 005.

I also use a Cyrel Sunrise M16-1280 graphics card and some of the
serial drivers and graphic drivers influence the modem and serial
ports. Also serial timing is effected by my TT's CPU being modified
to 48Mhz with a CaTTamaran.

Program order DRIVN, MFP, SCC, MFP_TT, and [RSVX (from HSMODA02)].

I use the SETTER.PRG to modify my settings, this program came with
hsmoda06.

DRIVN.PRG
FASTINT - off
EXOPEN - on

SCC.PRG I now use ESCC.PRG
M2TT - u
M1IMU - off
LANBIT - on
LANEXT - on
LAN_S2 - 1
DTRM2 - on
DTRS2 - on
M2DR1 - off
RBLM2 - 64
TBLM2 - 64
RBLS2 - 64
TBLS2 - 64

MFP.PRG
RSVE - on

REPL - set all six of these to "u"
DTR - on
RBL - 32
TBL - 64

MFP_TT.PRG
RSVE - on
REPL - set all six of these to "u"
RBL - 32
TBL - 64

Some tips:
1) In the drvn.prg turn fastint off.
2) scc.prg or escc.prg can not use TT RAM.
3) set mfp and mfp_tt transfer buffers only to 32k for STalker's use.
4) set STalker's file transfer buffer to 1/3 that of mfps for write verify timing slack during HD file transfer dumps.
5) Higher modem speeds are remapped through lower settings into Atari's MODEM.CPX. This information is described in SCC_X.TXT, in both English and German.
6) When in doubt contact the authors of each program involved (they helped me STalker, Connect, and hsmoda06)

> improvements that have gone into CAB itself.

Good point. Actually I believe CAB is not shipped with Dan's CAB.OVL.
From what I've heard there are some problems with the PPP-Connect OVL
too, but I'm not sure. Anyway, the main point was that it's not Alexander
who is responsible if anything with Internet traffic goes wrong.

Cheers Peter

PS.: There was a quick exchange of messages recently in the Mausnet on
people blaming Alexander for failures of the OVL or even the TCP/IP
stack, that probably made me react a little stronger than usual.
Apologies.

That's the wrong machine. The right address is UNItopia.rus.uni-stuttgart.de,
which resolves to a different IP address than helpdesk.

Try the address in the list that you get by clicking on the hosts edit field
in the "Open Session" dialog. I just tried it some minutes ago, it's still
valid. But you'll want an english MUD I guess ?

Cheers Peter

JR>> Since when does Extendos support HFS (Mac) media?
S> That means nowt to me dude, i only recognised the above scenario.

For what I can understand, the Extendos drivers gives the routines to access
data on various CD formats, then SPIN is able to understand the file system
and represent it as a GEMDOS drive, it is SPIN that understands the HFS.

>Obviously you still use that Oasis reader, guess how I figured that ?

I agree. My whole point was that I wanted everyone to please -think- about
what they are saying to me...and to take a hard look at themselves. <grin>

I've always put my name/handle into my .SIG so that I didn't have to type
it in manually. There is some redundency here, as you mentioned-my BBS's
number also appears in the message header under Organisation. :)

Peter, I've got no problems with you, I love STing-if it wasn't for your
program, I still would not be able to access the WWW with CAB. (and boy
do I love #atari in IRC!) so please, lets end this, okay? I have already
said, on more than one occasion, (even live in IRC!) that -technically-,
my position on .SIGs is wrong. I still think that a difference that makes
no difference, is no difference though... (famous Vulcan saying) <grin>

As for 'ole reliable Oasis, I'm using it (with its __ bug) until I can get
Newsie v82 (.84 now, right?) setup properly. See ya 'round CyberSpace...! :)

Eh?
They have nothing to do with programming PPP-Connect! They are for
programming CAB modules and talking to CAB using the CAB protocol.
Nothing there about programming PPP-Connect. If only it was that easy :(

>> absence

u> It's included for those who want to format MFM or RLL drives (Atari
u> SH/Megafile) with HDX.

OK, that makes sense, so is it bum software that causes HDX to whinge about the wincap file, i was never able to formatt my 50 meg seatgate with HDX, it always complained about the lack of a WINCAP file.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

I have a selection of Atari ST titles for sale.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> ALL PRICES ARE IN UK POUNDS <<<<<<<<<<
^^^^^^^^^^^^^^^^^^^^^^^^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) £3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) £4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) £5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) £5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) £5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) £5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 3
Superleague Soccer (1d,ss) 3
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 4
Graham Gooch's World Class Cricket (1d,ss,meg) 5

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2
Their Finest Hour -The Battle of Britian (2d,ds) 5
Carrier Command (1d,ds) 5
Railroad Tycoon (2d,ds,meg) 15

STRATEGY, MIND AND ADVENTURE

Alpha Waves (1d,ss) 2
Go-Moku/Renju (1d,ss) 2
Federation of Free Traders [F.O.F.T] (2d,ss,nb) 2
De Ja Vu (2d,ss,nb,ni don't have them) 2
Conflict Europe (1d,ss,nb) 2
Lords of Chaos (1d,ds) 3
Crash Garrett (2d,ss) 3
The Quest for the Time-Bird (3d,ds) 3
Tower of Babel (1d,ss) 3
Driller (1d,ss) 3
Populous (1d,ss) 3
Archipelagos (1d,ss) 3
Borodino (2d,ss) 3
Star Trek 'The Rebel Universe' (1d,ss) 3
Advanced Dungoens & Dragons
Heroes of the Lance (3d,ss,nb) 3
'Nam 1965-1975 (1d,ds,nb) 3
Pirates (2d,ss,nb) 3
The Kristal (2d,ss,nb) 3
First Contact (2d,ds,nb) 3
Airborne Ranger (2d,ss,nb) 3
Defender of the Crown (2d,ss) 4
Knightmare (2d,ds) 4
Elite (1d,ss) 5
Terrorpods (2d,ss) 5
Amberstar (3d,ds,meg) 5
Populous II (1d,ds, meg & 512k versions) 10
Lemmings 2 - The Tribes (1d,ds,meg) 10
Elite 2 - Frontier (2d,ds,meg) 10

ARCADE

Defenders of the Earth (2d,ss) 2
Eliminator (1d,ss) 2
Wrangler (1d,ss) 2
Hard Drivin' (1d,ss) 2
Yogi Bear & Friends In the Greed Monster (1d,ss) 2
Spellbound Dizzy (1d,ds) 2
Blazing Thunder (1d,ss) 2
Mig 29 Soviet Fighter (1d,ss) 2
Fast Food (featuring Dizzy) (1d,ss) 2
Whirligig (1d,ss) 2
Pheonix (1d,ss) 2

Hellraider (1d,ds) 2
Outrun (1d,ss,ni) 2
Bad Company (1d,ds) 2
Rambo III (1d,ss) 2
Mean Machine (1d,ds) 2
The Light Corridor (1d,ss) 2
Last Ninja 2 (1d,ss,nb) 2
Voyager (1d,ss,nb,NSTE) 2
Hong Kong Phooey (1d,ss) 3
Viz (Adults Only) (2d,ss) 3
The New Zealand Story (1d,ds) 3
Midnight Resistance (1d,ss) 3
Prince of Persia (1d,ds) 3
Hudson Hawk (1d,ds) 3
Panza Kick Boxing (2d,ds) 3
Golden Axe (2d,ds) 3
Cloud Kingdoms (1d,ss) 3
Cap'n Carnage (1d,ss) 3
Cabal (1d,ss) 3
Impossamole (1d,ds) 3
Risky Woods (1d,ds) 3
ST Star Raiders (1d,ss) 3
Oxxonian (3d,ss) 3
Barbarian (Psygnosis) (2d,ss) 3
Barbarian (Palace) (1d,ss) 3

TinyFugue is really flexible and compiles without problems under most unix systems. Should be no problems under proper MiNT setup either. If you are unable to compile programs under MiNT, you can do it on any decent ISP. Compile and run it on your shell account. You still need terminal program or telnet client to get connected to ISP. (Yes, I know that all ISPs do not provide shell accounts but you don't have to blame me for that)

If you are still interested, information about 'TinyFugue - programmable mud client' is available at 'http://tf.tcp.com/~hawkeye/tf/'.

2123. faulty DMA chip into STE

Newsgroup: comp.sys.atari.st
Date: 1997-11-08 00:00:00 UTC
From: Rolland <eagle.flight@videotron.ca>
Message-ID: <3464A972.57D27644@videotron.ca>
Source record: 113846

ello!

I'm a new user in this newsgroup, so maybe I wont follow all the 'procedures' but I'll try to do my best.

Actually I have a problem with a 1040 STE machine that have the 'buggy' DMA chip, the one that make some write errors on the hard disk after a few hours of working.
So I have to replace this chips but I need some information about the family of all available chips that could replace this faulty chips.

So could you tell me what are the numbers of any DMA chips that could do

the job wright. I have a lot of broken machines in which I could take the good chip: 520 ST (Tos 1.0), 1040 STE with soldered DMA, and 1040 STFM.

I need any information about a replacement chip that could resolve my problem.

I thank anybody that could give me some help.

Bye!

Rolland Collin

2124. Atari 1040 ST monitor

Newsgroup: comp.sys.atari.st

I have bailed out!!! The following equipment is available: Atari 1040 ST, Atari 520 ST, Monitors: SC1224 & SM124, Printers: Brother HP-15 & Epson LX-80, External 3.5 Floppy, 2 mice, joystick, cables, manuals, software, etc. All as package. Value ? I'd like some feedback. Thanks. Brian at Riverhouse4@ Juno.com.

2126. U.T.S.I 16c full compatibility

Newsgroup: comp.sys.atari.st
Date: 1997-11-08 00:00:00 UTC
From: dipching@ping.be
Message-ID: <879011810_OASIS_@ping.be>
Source record: 113849

Hi everyone !

The ULTIMATE T.O.S SOFTWARE INDEX is now fully compatible with 16
colors resolutions like ST Low and TT Medium ...
The link buttons have been redrawed into these colors to allow
reasonnable 16 colors users to use the whole web site !

Atarists with black and white resolutions will have to wait a little
more to access the whole site because some pages are yet incompatible
like the Audio/Midi, Emulators and Games pages ... the others are
perfectly readable now !

I will continue to work on my pages so they soon will be more and more
compatible with every atari resolution possible :) (excepting the ST
medium resolution which I think is now rarely used today ... just let
me know if you are in this case :) ...

Note: nevertheless, be aware that WenSuite DOESN'T CORRECTLY DISPLAY
the U.T.S.I pages at every possible resolution and it is not the fault
of my pages ... just look at other pages with tables and you will see
what I'm talking about ! So AVOID WenSuite when consulting the U.T.S.I
.. for the moment ... let's hope Oxo will remediate to their display
problem ...

Jo

2127. STING and Compuserve;-(

Newsgroup: comp.sys.atari.st
Date: 1997-11-08 00:00:00 UTC
From: Joerg_Sprenger@K2.maus.de
Message-ID: <199711081333.a927@k2.maus.de>
Source record: 113850

Hello Peter,

I've got some major problems, using the Sting-Distribution to connect to the web via compuserve. I suppose, the main reason ist, that MODEM1 (I'm usin'a POWERBOOK with MM 1.25) is set to 8N1 instead of 7E1, which is expected by compuserve.
After setting these parameters in serial.cpx to 57600 7E1, activating sting by sting.internals.cpx, starting dialler and quit it immidiatly, the serial.cpx shows a changed MODEM1 to 57600 8N1.

I know, that PPPCONNECT uses 7E1 for compuserve, because while using 8N1 I've got only unreadable signs, but no valid PPP-connection.

So, could somebody confirm to this exspiriences, or better lead me to a solution, using STING correctly for compuserve and t-online?

bye, J�rg

Who can help me with the SPECTRE emulator Apple for ATARI?
I have it, but no system disk, except old System Finder 6.0.
Is it possible to install some modern or not? Are there any
restriction for it? Who can help me.

Thank you very much for the answer.

>Not really, as you already double-checked before.

And, yes, we verified with our ISP that the IP we recieved is correct.

>So it definitely looks as contacting the ISP is the best bet here.

Talked to the ISP this morning for too long and they were not very helpful. When we originally inquired regarding monitoring our connection we were told no problem. When we actually tried to get someone at tech support to DO IT... well, you can imagine what happened when we said no, we don't do windows!

When trying to ping them they say they get nothing. They try to ping us and they don't get a reply either. We're going to call back again late tonight when the original responder is working; maybe because he works overnight he has a bit more time to devote to customers.

Anyone else using primenet, please feel free to call tech support at (800) 463-8386 and maybe you can get them to monitor your connection. Midnight to 8:00am MST you can ask for Eric. He appears to be willing to help. If you get Chris or Philip you can add to our, "maybe it's time to find a new ISP" threats. Seemed to be the only way to get their attention this morning. Maybe a few more calls will make a bigger impact.

We'll keep trying!

I have the following:
520ST computer
upgraded to 1 Meg, TOS 1.0, mouse and manual. Was working last time I checked, but it sat for a year and now I can't seem to get it to boot.

SC1224 Color Monitor
works fine with manual

SF 314 Drisk Drive
Has power supply, cable and manual.

ICD Link 2 DMA to SCSI host adapter
all cables, manuals and software

The following software:
Road Raider
Battletech
Speedball
Rockford
TV Sports Football
Microleague Baseball II
Test Drive
Test Drive 2, Supercars, Muscle Cars, Eauropean challenge add ons.

All of this for a 720K and a 1.44M floppy drive mechanism. You also pay all shipping costs and I'll even throw in a ST-157N-1 Hard disk mech if you want it.

Please e-mail any responses to jecalhoun@earthlink.net since I don't read this newsgroup very often.

>parity bit and can use both types.

Simon,

Just ask for 1 meg x 8 or 9. Ask for 30 pin Simms. You will want to go with
ones that are 80 micro seconds or faster (lower number is faster). If you
can't find these let me know as I have 12 or so left in my stock.

It also appears a little hard to get hold of :(

I managed to find 0.26 on some ftp sites yesterday, and that had no mention of NOS. As soon as I read the above posting with a url, I went off to get 0.29. The above web site is all in German with no mention of the Okami newsreader. It looks like you have to fill in some kind of form to register something or other and I'm filling something in that I don't understand! All this just to get hold of a program that I don't even know if I'll like or find useful :(Is Okami some kind of elitest program, is it freeware, shareware, what? And how can I get hold of 0.29?

Regards,
Gary

I received an e-mail message from Mr. Clauss regarding the 2.5 version. He tried accessing my web site using the new version and said that it worked just fine. All I have to do is find a USA dealer that has 2.5 in stock. Toad said they don't sell Atari anymore, Steve's said he is waiting for a shipment from the UK. Bottom line, the problem with CGI URL Strings seems to be resolved.

I haven't come across anything yet in the PC world that I like nearly as much as KCS Omega for the Atari ST by DrT's MIDI Software. It's a long discontinued piece of software & I'm still hanging on to mine but if you watch the BBS's for the FS notices you might find a copy. It should probably be something easily under $100 for the latest version which I think was either 5.0 or 4.0

>Rumour has it that ASH recently demo'd mail/news clients for PPP-C at
>a German show. Lord knows when they'll emerge and that will still

I think we can get it before x-mas!
What's the point?

If i can get that 'rumors' i have what i want the hole time...

Well, that's the end of my neverending story:

STiK/SLIP = realy slow, but it works fine! No PPP avaiable
STinG/PPP = doesen't work on my machine, the only access is a 'connect', but not more.
STinG/SLIP = slow, same as StiK, but it can't work with the latest release too.
MiNT = a very great package, but what a mess, that all for only to get a fucking web access
?

And a very great problem is that not one of the authors can talk with another
guy what do nearly the same. A easy way to get a socket for ALL clients !!

I don't like to chance my configuration between a fast PPP-C access and
an slower SLIP-basesed one only for a fucking file transfer from a FTP !

Do not use that DIALER with StiK..

The first author how was supports a stable fast ppp socket for ALL clients takes
my money, all other one can have a look to 'StarWars' movie..

In the moment i see the best chances for ASH.
Sorry..

Regards, Robert

>So my question is: should I re-format the drive, and specifying a
>different sector/cluster size? I don't know
>what the current sector/cluster size is. Is there any possibility
>I may damage it? I've reformatted SCSI drives a number of times, but
>I seem to remember a discussion a while back about possibly damaging
>an IDE drive my reformatting it.

Hi Michael,
There's no risk in formatting a modern IDE/EIDE drive, but on older ones you may overwrite all the info about heads, cylinders and whatever and never be able to use the drive again since this data is written on the disk instead of in a PROM on the harddisk's controller card.
However, on the Falcon (as well as on other Ataris), you normally don't need to format the drive at all - just re-partition it and it should work as expected again...
Another thing to keep in mind is that your ICD driver isn't fully AHDI compatible and that might cause problems if you use for instance Cubase Audio. I would absolutely recommend that you buy HDDriver instead, since it's the driver that's most actively updated. Of course, if your ICD driver works fine for you, there's no need to change - but I certainly would concider it anyway.

>

Hi Simon,
Just about any kind. I seem to remember that some SIMMs with 3 chips might
not work so you should look for SIMMs with 8 or 9 chips to be certain. It
doesn't matter if they're with or without parity, since the STe ignores the
parity bit and can use both types.

Modem.CPX saves its settings as a part of NEWDESK.INF, afaik.

However, what appears to me is these people left both CPX enabled.
Modem.CPX probably has the resident bit 'ON' also.

I've still only had a few votes, and it's only a few weeks to the voting deadline. If you are planning to vote please do it soon or you'll miss your chance.

Please note that votes posted in this Newsgroup may go uncounted, therefore if you wish to vote please either use the Form on the AT Homepage, or send a private email to me with your nominations...

1997 Atari Times Awards

In order to pay tribute to those people who have supported the Atari scene over the last year, the Atari Times is launching the Atari Times Awards...

All you have to do to vote is fill in the form on the Atari Times Homepage - http://www.users.zetnet.co.uk/polonowski/atimes/ - or email your votes on the categories below to polonowski@zetnet.co.uk

The biggest award is the 'Special award for services to the Atari community'. Before voting on this we think you should consider your answer very carefully.

Voting will end on the 1st December 1997 so make sure you've made your contribution to the final results. The December issue of the Atari Times (UK) will be the first publication to print the results. After this a few other atari magazines will be given access to the results for possible publication. If you wish to print the results in your publication then email Colin Polonowski at the address above.

The final results will also be made available on the Atari Times Homepage as soon as they have been confirmed, even if this is before the release of the December Atari Times.

That's all you need to know, so go on and get voting...

Atari Times Issue 13 - December 1997

Issue 13 of the Atari Times (UK) is due for release on 15th December.

We are currently looking for people to contribute one article (or more) to this issue. You can write about almost anything - review a piece of software, previews or maybe even a feature. I'm also interested in any ideas you may have with regards to on-going series or one-off features.

The deadline for submissions is 1st December, so you only have a few weeks. If you are interested in writing something for AT13 then please email me as soon as possible.

All submissions should be in English, in ASCII format and where possible should also include screenshots.

For more information regarding the Atari Times, please visit the Atari Times Homepage which can be found at:

http://www.users.zetnet.co.uk/polonowski/

Remember, if I dont get enough stuff, there wont be a magazine!

Not physically no. However AIUI some IDE drives contain information
specific to the drive which they will not work without, such information
can only be written by the formatting utility specific to that drive
(usually PC only software), therefore you format the drive and it will
not work.

From first hand experience, I low-level formatted a 2.5" Seagate 270 meg
IDE drive and promptly lost over a third of its space... It most certainly
did damage this drive!!!

Somebody correct me if I'm wrong here, but ICD's Utils won't even let you
format an IDE drive, right? :)

2159. Help with STing and networking.

Newsgroup: comp.sys.atari.st
Date: 1997-11-09 00:00:00 UTC
From: dbolt@my-ste.demon.co.uk
Message-ID: <879118079.6045.0.nnrp-01.9e98f145@news.demon.co.uk>
Source record: 113788

I want to be able to link a second ST, using the MIDI ports, to the net while the first one is connected. This is so that I can do news/mail collection or web browsing, whilst my wife uses her machine to do some browsing.

At the moment, I've managed to get my spare ST to ping the main ST, and vice versa. The problem comes when I try to ping any IP address on the net. I can see the packets being sent (the SD lights up) but nothing is returned.

I picked a couple of IP addresses for the spare ST and the MIDI port on the main one (1.254.254.1 and 1.254.254.2 with 1.254.254.3 ready for the wifes)

Below are the route.tab files of both the main and spare ST's

```
# My main ST routing table.
#
1.254.254.2 255.255.255.0 Midi 0.0.0.0
#1.254.254.3 255.255.255.0 Midi 0.0.0.0
#
0.0.0.0 0.0.0.0 Modem 1 0.0.0.0
```

```
# My spare ST routing table.
#
# Node routing table for my Atari network.
0.0.0.0 0.0.0.0 Midi 1.254.254.1
```

What I want to know is, how do I get the packets wanted by the second machine sent to it? I've tried playing with the routing table but nothing seems to help.

Has anyone actually got this sort of set-up working? How did you do it?

Thanks in advance

Regards,
David E-Mail :- dbolt@my-ste.demon.co.uk

That's what I'd suspect if I had to assume it's not Wensuite's fault.

> The funny thing is
> that Wens 1.70k works fine with Magic - it's just the v2.x which are
> not happy.

That's not too surprising. Note even MagiC's smart memory corruption
detection technique only works if a internal memory header is over-
written. If Wensuite just happens to overwrite contents of a block
instead of the header, MagiC won't complain, but you'll suffer some
inexplicable problems or crashs later.

So PPP-connect does a PPP connection using 7E1 ? I find that really hard
to believe. The PPP RFC states clearly that an 8 bit connection is required,
and that is completely obvious from the fact that PPP uses many control
characters above 127, therefore actively using the 8th bit that won't exist
in 7E1.

> So, could somebody confirm to this exspiriences, or better lead me to a
> solution, using STING correctly for compuserve and t-online?

Some guy in the Maus-Gruppe "Internet" (maus.sys.atari.internet) posted
his setup that he uses to log into T-Online.

><URL:http://www.xs4all.nl/~josdb/okami.html>.

Ok. I just got the version from the above url. It's 1.28.
I haven't tried it yet, but the docs do say it works with NOS :)

The fact that it now works with NOS, also means that people can use
POPwatch, NEWSwatch, STiK/STiNG, and completely bypass NOS. In theory, I
haven't got that far yet.

POPwatch and NEWSwatch support NOS, so in effect, they also support Okami!

Anyone done this yet?

Why is Okami so mysterious? Maybe it's just me, but no-one in these
newsgroups seems to mention it (until now). Surely if an author wants their
program to reach an audience, then they should announce it in this
newsgroup? Is there some world of Atari users that I'm not aware of (outside
this group? Other than maus.net?)

Gary

They say they don't get anything even though you see your modem's send LED
flashing ? That's impossible. Even if everything goes wrong they should
see at least wrong checksummed packets.

Do you see their ping attempts by seeing the receive LED flicker ? If so,
what does the Dialer's Statistics say ? Give me the numbers for both the
modem port and the "Internal" port.

You might have overlooked here that I explicitly talked about programs being
absolutely stable under MagiC. Those do work properly with MagiC, but do not
with MultiTOS. They generally do work properly with NAES, and do so too with
single-TOS, but cause strange problems with MultiTOS. It is MultiTOS being
at fault here.

> If the program doesn't work as it should, put it in the trash there it

The default buffer size in SERIAL.CPX is what you've set your HSMODEM modules
to via SETTER.TTP

> increasing this, and to what? I'm running a 4 meg STFM with a 14400 modem.

No, there isn't. I use 512 bytes usually and it's fine. I doubt there is any
setup where larger than 4K would be sensible.

2174. Re: having some luck :^)

Newsgroup: comp.sys.atari.st
Date: 1997-11-09 00:00:00 UTC
From: PWest@fortress.org.uk
Message-ID: <5516_PWest@fortress.org.uk>
Source record: 113803

FROM: pwest@fortress.org.uk
SUBJ: having some luck :^)

FWIW, I tried unpacking your Mime attachment message in LED with 'Write binary' - it didn't want to know, signalling 'Not a binary'! I then tried saving it as ASCII and loading it into ESS-CODE. It loaded OK, but when trying to extract it it warned 'An existing file will be overwritten' (presumably TMPDESCR.TXT which seems to be the file to be extracted written to the ESS-CODE directory when you click on 'Unmime' and normally deleted after a successful extraction); when I clicked OK for this it seemed to work but no new output file was written.
Finally I loaded the file into Everest, clipped off everything but the attachment and tried ESS-CODE again. This time it worked and produced a file ACCS2.ZIP (the name I had input in the second file selector). *BUT* when I tried to extract it with 2-in-1's ZIP.JR, it didn't work - in fact clicking on the name didn't show the contents (as is usual). And trying ZIP 2.6 itself it reported that ACCS2.ZIP was 'Not a Zip file, or damaged'.

I don't know if that helps, but it might narrow things down a bit. Why not try Miming the file first (or UUE'ing it) with a separate program and then importing it as an addition to your message? Not as convenient, perhaps, but at least you can test first that the file unMimes/UUD's OK!

b> And what do those of us poor souls who paid their good money
b> in good faith for Outside and HDDriver do for support, and upgrades?
b> Are we even registered, and what are we supposed to do?

Surely this is something you should take up with Computer Direct or whoever supplied you with the programs! And ask them whether they have paid their suppliers for these programs - if not, kick their a**es until they do! While they may be having cash flow difficulties, programmers on the Atari can never charge enough to really get a just reward for their hard work due to the restricted market - they can't be expected to forego fees (or wait forever for them) one they have been sold!

> d> I have heard a couple of times that CHKDSK3 could screw up your HD.
> d> STTOOLS might be a better choice.
>
>I got warned of using that ages ago when i discovered it.

I have always used ST Tools (Tool18) until recently when it was
finding many errors. Hundreds. All sorts of ophaned this and that.
I had to press "continue" each time. This was wrong not only because
it shouldn't have been necessary, but the hard drive was working fine.
I mean, I had 1 report of a corrupted file that was downloaded, that
was it.
I coudn't run ICD's Cleanup because the older version (4.24) would
crash on the newer handler (6.5.5), so I loaded an older version of
the handler (5.6.1), ran Cleanup, and it found 1 error and fixed it.
What a relief.
I hear that ICD came out with version 7 of their handler and an
upgraded version of their Cleanup, bundled together in their Pro
package. More compliant, they say.

>I'm using Okami 0.29 (there's no 1.29 -I guess you meant 0.29 Bruno)

No, I really meant Okami 1.29 (exactly U1.29A), the update made by
Jos den Bekker and able to run on top of NOS as well as with SOUP
packets and UUCP.

Jos just wrote in NOS mailing list he needed more beta testers for
Okami, more info and the last version to download can be found at
<URL:http://www.xs4all.nl/~josdb/okami.html>.

Bye! Bruno.

AFAIK, the old version where the patch works is a non-BFD based linker.

I am working on BFD support for Atari ST binaries, but this may take some
time ...

According to my bookmarks I found it here:

http://www-hze.fht-esslingen.de:80/~ntw5miku/okami/files/

>As for using it with NOS -I have no idea about that... some other person in

It can't be used with NOS unless you want to write a program to unbatch
the news and anoter to convert the replies Okami generates to the NOS
format.

It is possible use it with a MiNT/Mintnet setup if you install cnews and
nntpd, but again you will have to write a shell script or a program to
convert the replies and hand them off to cnews.

Maybe Gary Priest can add support for Okami in NEWSwatch and POPwatch.

>Okami is a pretty powerful program, but not really user friendly
>-especially not setting up. It's not just a matter of clicking here and

Okami is the best newsreader available right now. NEWSie is not bad, it
really needs better threading and expiring though.

Ony an ST monitor will be plug and play. You can however easily make any RGB monitor (including a TV set) display low and medium resolutions. You need to know the pinouts though. high res (monochrome) require an atari monitor or a hhacked VGA monitor (but it's better on an SM124 or 125)

Information on the subject can be found in my Quick FAQ.

In article <HKIEFGAFUP@data.rhein-main.de>
robscha@data.rhein-main.de (Robert Schaffner) said:-

<snipped stuff about PPP-Connect clients and non-STiK (ho ho) sockets>

>Well, that's the end of my neverending story:
>
>STiK/SLIP = realy slow, but it works fine! No PPP avaiable
>STinG/PPP = doesen't work on my machine, the only access is a 'connect',
> but not more.
>STinG/SLIP = slow, same as StiK, but it can't work with the latest release too.
>MiNT = a very great package, but what a mess, that all for only to
> get a fucking web access ?
>
>And a very great problem is that not one of the authors can talk with another
>guy what do nearly the same. A easy way to get a socket for ALL clients !!

I guess my point is that STiK, STinG and MiNTnet/GlueSTiK all provide
STiK-compatible sockets, so that all STiK clients will work with all
three, give or take the odd exception. PPP-Connect is alone in
providing non-standard sockets so STiK-compatible clients won't work
with it. BTW MiNTnet isn't just for web access: there is probably a
greater range of clients for MiNTnet than any other stack, due to the
large number of ports of Unix stuff as well as the ability to use the
STiK stuff. I'm entirely with you in that it's horrible to set up,
though.

>I don't like to chance my configuration between a fast PPP-C access and
>an slower SLIP-basesed one only for a fucking file transfer from a FTP !

Great if that's what you want. I however want at least the following
from an internet connection: mail, news, WWW, FTP, telnet. Gopher
would be nice but as it's on the way out I can't see anyone doing a
gopher client for STiK, unless it was to be built into CAB.OVL and
converted gopher directories into HTML for CAB to deal with. IRC is
essential for many, though not for me, yet. STinG/PPP and PPP-C are
pretty much as fast as each other in my experience, BTW.

>Do not use that DIALER with StiK..

?

>The first author how was supports a stable fast ppp socket for ALL clients takes
>my money, all other one can have a look to 'StarWars' movie..

More chance of that if PPP-Connect provided STiK compatible sockets,
don't you think? So far STinG is the closest. PPP is working well for

many (including me). Yes, there are problems for some people such as yourself, but Peter R is working blooming hard to fix them considering he isn't asking for money.

>In the moment i see the best chances for ASH.
>Sorry..

If the mail and newsreader programs are good, I might be tempted myself, but I could live without having to switch stacks to use other services because of ASH's determination to keep everything proprietory(sp?). You'd already have your wishes fulfilled if they'd have made PPP-C STiK-compatible.

Cheers,
John

Hi Peter,

in a message dated 09 Nov 97 Peter West wrote:

PW> FWIW, I tried unpacking your Mime attachment message in LED with
[.../...]
PW> (as is usual). And trying ZIP 2.6 itself it reported that ACCS2.ZIP
PW> was 'Not a Zip file, or damaged'.

Be careful with Led when decoding a file attachment (uue or mime) not to have the "decode mime"-text feature set to on. Same thing if you save the message in ascii to decode it with another program. I had this 'surprise' the other day...

Bye Peter,

Source record: 113874

FROM: pwest@fortress.org.uk
SUBJ: IRC sounds...

Perhaps if you made your edit window a tad narrower the sig wouldn't look
quite so big on many screens! With 600*400 I find that any setting larger
than 76 characters in the message window tends to hide the last few
characters in long lines so that one needs to scroll to read them properly;
but with a 76 setting your messages *and your sig* causes extra line-breaks
on screen so that they look much longer than they are :-)
Just removing the two indent spaces might do the trick!

Regards
/Peter/

2195. FS: Complete Atari Mega ST system with Software (including MIDI) & Magazines

Newsgroup: comp.sys.atari.st
Date: 1997-11-09 00:00:00 UTC
From: Doug <earthton@ix.netcom.com>
Message-ID: <3465CB98.3D17@ix.netcom.com>
Source record: 113875

FOR SALE: Complete Atari Mega ST system with Software & Magazines

Taking bids now. Please email Doug directly at earthton@ix.netcom.com
Buyer pays for shipping.

HARDWARE:
Atari Mega ST2 with keyboard, mouse, and PC Ditto II installed.
Practical Solutions Mouse Master Switchbox (1 mouse input / 2 joystick inputs)
Atari SC1224 Monitor
Kraft Joystick with Fire Button
US Robotics Courier 2400 Modem
Atari SF314 external floppy disk drive
External 65Meg (I think) Miniscribe Hard Drive
ICD External FA*ST Tape Backup with manual and tape. (May need minor repair)

SOFTWARE:
Approximately 350 DISKS full of different games&software, too many to list...PLUS:

Pagestream 1.0 & 1.5 with manuals
Publishing Partner Professional for Pagestream with manuals
Hybrid Arts SMPTEtrack II with in/out box and manuals
Copies of Hybrid Arts SMPTEtrack GOLD 5.0 and 6.0
Hybrid Arts EZ-Score Plus with manuals
Procopy ST with manuals
1st Word with manual
Copies of PC Ditto II
Draw Art Professional Clipart Disk #1 and #2 with booklet
Copies of FOREM 2.8 with manual
Degas and Degas Elite with Manual
Star Trek the Rebel Universe with manual
Complete Your Roots with manual
Dbman V
Obliterator disks and manuals in box
Barbarian Disks and manuals in box
Blood Captain disks and manuals in box
Dungeon Master Expansion Set #1 ﷺ with manuals in box
Atari Planetarium
The Font Factory Dingbats/Symbols

>
> http://www-hze.fht-esslingen.de:80/~ntw5miku/okami/files/

Nope. That url's no good, just tried it :(

>>As for using it with NOS -I have no idea about that... some other person in
>
>It can't be used with NOS unless you want to write a program to unbatch
>the news and anoter to convert the replies Okami generates to the NOS

Oh that's disappointing. I only got interested in Okami because someone
earlier in this thread said it now worked with NOS :(

Maybe I could, but is it worth it? Seems to me if Okami is proving so
difficult to get hold of, then I can't imagine many people are using it?

>>Okami is a pretty powerful program, but not really user friendly
>>-especially not setting up. It's not just a matter of clicking here and
>
>Okami is the best newsreader available right now. NEWSie is not bad, it

I've started work on my own newsreader, but it's got a hell of a long way to
go. I'd really like to get hold of the latest Okami and see what it's like.
If it does all the things I'd like, then I'd probably use that instead.

2198. Clean BASIC programming H

Newsgroup: comp.sys.atari.st
Date: 1997-11-09 00:00:00 UTC
From: Jeff.Thomas@taf.to.org
Message-ID: <8e6_9711091122@tor250.org>
Source record: 113878

```
DI>Who could help me program properly? I'm looking for a "skeleton" for
DI>my basic programms (GFA OR HISOFT) that could correctly manage
DI>multitasking, graphic cards, resolutions AND so on... Some of you
DI>will tell me TO use C OR assembler, but I'm not a professionnal
DI>programmer AND I like the simplicity of BASIC. Thank you!

Who says BASIC isn't for professional programming? :-)

Geneva multitasking software comes with GFA BASIC source code for supporting
it's features. Also as long as your friend writes 'well behaved' GEM
applications, it's likely they won't have trouble running in a multitasking
system. I think there's a Appl_Yield() function call to allow background
processes to get some time running. Geneva uses cooperative multitasking,
so applications have to volunteer processor access to processes running
in the background.

If your thinking of MINT, then you'd likely access it's features through
GEMDOS calls. The docs that come with MINT should have the details.

As for Magic, I don't know.

The basic skeleton for GEM apps goes

init the appliaction
open a virtual workstation
load resources
draw interface
init event handlers
wait for user response or system message, then branch to subroutine
:
:
Upon recieving a message to quit the application
close the virtual workstation
exit the application

It's pretty much the same in any programming language. It's just the way
that GEM insists on things being done.

Managing resolutions, on an ST at least, happens through a few XBIOS calls.
In GFA BASIC you could do this...

~XBIOS(5,L:-1,L:-1,%r)

That should call the Setscreen routine, the -1's are instructions not
to change the screen addresses (logical/physical), the r% is the mode
that should be switched to. Values go 0 - ST Low, 1 - ST Med., 2 - ST High,
4 - Reserved. Note that the ~ is to indicate a 'void' result from calling
```

the function. That's a way of saying the program has forced the function
to not return a value.

Graphics cards are a bit of a tough call. First we'd need to know what kind
of program you have in mind? A device driver is very different than a more
conventional application. Also what graphics board do you want to program
for, what is the graphics chipset being used, where is the the board in the
processors address space? What is the command set for that graphics chip
on the card? Or does the graphics card you want to program for come with
supplied drivers already, and all you need to do is send instructions to the
driver? Oh yes, almost forgot, does the graphics board follow the VESA
standard?

Later...

I have exactly the same problem.
I think that the only way is to use another program to get thru the
login procedure and jump to STING's DIALER when the "One moment please..."
sentence appears.
I don't know if terminal emulators that do scripting exist on ST
(such as TELIX or PROCOMM and so) do on PC ?
But I think that I will write a small GFA program for this purpose
very soon.

But for the moment, you could try to experiment like I do :
using e terminal Emulator (the standard VT52 accessory for example)
to dial and log into CIS and switch to the dialer then.

Sincerely.

Jean-Michel MERCIER.

Hi all!
I've got a problem. One year ago I changed the systems from Atari, which I used because I'm a music-teacher, to PC. I wrote many MIDI-Files with my ATARI and I don't want to loose them.
Can anybody tell me, how I can transfer these files from my old ATARI 1040 STFM to my PC? I think that I can't use the floppy because of the different formats.
Thank you for help

2206. STinG DIaler : How to ... with already connected modem

Newsgroup: comp.sys.atari.st
Date: 1997-11-09 00:00:00 UTC
From: Jean-Michel MERCIER <jmmercier@compuserve.com>
Message-ID: <01bced5b$e641a580$LocalHost@grossevache133>
Source record: 113886
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

I must log into my ISP (Compuserve) before running DIALER
because the loggin script have to use 7 bits even parity
(I wrote a little GFA program for this).

So when I run DIALER, the modem is already connected (carrier is
present).
But I can't find a way to negociate PPP.

I tried to suppress INIT, PREFIX and PHONE_NUMBER from my DIAL.SCR
but that doesn't help.

Anyone have an idea ?

Thanks.

Jean-Michel MERCIER

You're probably better off by using the 'Port Setup' CPX. Do the login with
the terminal emulator, then exit it (so that it releases the serial port),
then open the CPX, make sure the flags are right on the General page of
the modem port (SLIP/PPP, VJHC etc), then switch back to the addressing
page, click 'Active' and 'OK'. You should note the modem LEDs start flicke-
ring, when they go quiet again after a few seconds the line should be ready
for data traffic.

Cheers Peter

Which is strange in itself. There is no reason why PPP should be noticably
faster than SLIP (as long as ISDN is not used). This is confirmed by my and
everybody else's experience who has got a working setup.

So there must be something wrong with your SLIP setup.

I think this was a case of no support from the "support" folks. We haven't given up, yet. But, we're still trying to get help from someone willing to help and not just complain because they don't know anything about our system.

Apparently, most support is limited to analyzing the setup parameters of the supported software rather than analyzing and fixing the problem. These folks were rather useless, up to this point.

Thanks for the continued help!

>
> Right, but why ?
> A communications problem?

On whose side ??

Should the STinG/STiK/GlueSTiK developers try to guess who of the
five billion people on earth will come up with a TCP/IP stack, in
order to talk to him to negotiate standards ?

Shouldn't it be the other way round, i.e. shouldn't someone writing
a new stack look out for existing standards, and adopt them ?

It's the latter what the PPP-Connect author(s) badly failed to do.
I therefore do not accept any complaint on the issue.

Cheers Peter

On 10 Nov 1997 15:50:09, Austin Walshe wrote:

>Can any one tell me the significance of the Sting DNS cache

It is a local store of the translation between alphanumeric addresses
and the 4-part "dotted-number" addresses. Your ISP has a nameserver
which will also have caches.

and why I
>would be getting a load failure during the booting of the sting modules
>on my TT?

I have only known this to occur when there is no /STING/CACHE.DNS file
as the STING kernel is loaded. There is no bother with this as STING
will create a cache file if none exists.

My ISP dynamically allocates IP address (I am not sure if
>this is relevant?)

Nope!

Replacing the CACHE.DNS file alleviates the problem
>until a further log on attempt to my ISP is made.

Don't know what you mean by "replacing", Austin -- with what? And
what problem occurs at log-on? The lack of CACHE.DNS produces a
warning message but only at the load time of the STinG kernel.

Are you sure you have set your ISP's nameserver address(es) in
DIAL.SCR?

Read the fucking DIAL.SCR comments. It's all explained there !
Set SUCCESS to DIRECT, and leave the DIAL_SCRIPT part empty.

Alternatively, use the 'Port Setup' CPX instead of the Dialer.

> the normal 2-color mode, you get 640*400 and it might mess up the
> graphics...

Indeed, the best results I get are with Backwards and hi-res
(st-compatible) settings.
Backwards does seem to solve some midi timing problems but is not
necessary.
But the problems with the file-selector messing up the screen are still
there.
Under Magic, less problems with the file selector, but lots of other
(timing) problems.

btw apart from this minor problem the d110 editor is a very nice piece
of programming!
My best wishes to the programmer!

greetz,
Vince

2221. Cubase Audio crashes, seems related to HD driver, what's wrong?

Newsgroup: comp.sys.atari.st
Date: 1997-11-10 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <HF5RCYC@tos.pl.net>
Source record: 113813

A problem has just developed with Cubase Audio on a C-LAB Falcon MK X.

The softare works except for the audio features, which tend to crash. In particular, when selecting a new record file, Cubase Audio now crashes, with bombs appearing reaching about half way across the display.

The problems seemed to start after I repartitioned the disc. Previously the disc had been partitioned with the ICD software (this was as it was supplied from C-LAB) but I had been using HDDriver version 5.1 as the hard disc driver. This was working reasonably well, until I repartitioned the disc with HDDRUTIL. After this, Cubase Audio would always crash as explained above, no matter what hard disc driver I used or what partitioning scheme I tried.

Sometimes Cubase Audio would work correctly, however, and this usually was when using the ICD driver. But the correct operation was only intermittent - next time I rebooted, the problem would be back.

Now I can't get Cubase Audio to work reliably no matter what I try. Occasionally it works ok when I use the ICD hard disc driver, but even then it works correctly only intermittently.

The C-LAB Falcon MK X has 14MB RAM and a 2GB hard disc drive.

What could be wrong? How could I avoid this problem?

Your assistance would be much appreciated.

Uh, sorry. I deleted the original post and had to use Hallvards' reply.

>> http://www-hze.fht-esslingen.de:80/~ntw5miku/okami/files/
>
>Nope. That url's no good, just tried it :(

Sorry again. That should be:

http://www-hze.rz.fht-esslingen.de:80/~ntw5miku/okami/files/

The files you need are o_028.lzh and o028_029.lzh. The second file is
actually a patch program for Okami.

>Oh that's disappointing. I only got interested in Okami because someone
>earlier in this thread said it now worked with NOS :(

There was no mention of NOS in the docs I read and I haven't used NOS
for 2 years now and haven't tested it.

>Maybe I could, but is it worth it? Seems to me if Okami is proving so
>difficult to get hold of, then I can't imagine many people are using it?

There's a newsgroup on Maus Net dedicated to it so there must be some
people using it. AFAIK the authour is no longer supporting the Atari
version though :(

>I've started work on my own newsreader, but it's got a hell of a long way to

Now that the NetWorld library is available for HiSoft Basic (many thanks
to Paul Jones) I'm going write a shell program that uses Okami for a
news and mail reader.

>I'd really like to get hold of the latest Okami and see what it's like.
>If it does all the things I'd like, then I'd probably use that instead.

About the only thing it's really lacking is an address book, but then
who really needs an address book.

BTW, it uses the same system as Unix for the news directories.
comp.sys.atari.st would be in - newsbasedir/comp/sys/atari/st
newsbasedir would be the directory you set in O.INF.

Brad

> What could be wrong? How could I avoid this problem?

It may happen that some versions of HDDriver don't
manage correctly the bad sector list on some drives....
So when you use it just one time,the disc is then
crashed ! Several of my customers had this problem
with 1.2 Gb seagate ide, and we had to send them
back to the factory because they had been trying
HDdriver (i don't remember the rev.num.) ,they
then came back with a sticker "factory repaired
in singapore" and we formatted it with icd pro 6.5.5
and it now works fine !!
In fact, when you have a working config. you should
never try changing it :))

Hi All.

Can any one tell me the significance of the Sting DNS cache and why I would be getting a load failure during the booting of the sting modules on my TT? My ISP dynamically allocates IP address (I am not sure if this is relevant?) Replacing the CACHE.DNS file alleviates the problem until a further log on attempt to my ISP is made.

Hi everyone !

In the past some guys asked for a possibility to connect
parallel zip drives to their ATARIs.
Some others said, this will never be possible because of
missing control lines on ATARI's parallel interface :-(

But now I have good news for you:

In the last issue of ATARI-Inside I read that Woller & link
has developed a interface for the ROM-Port to connect those
type of ZIP drives. And should be available right now !

On the same interface you can also connect a true color
videocam (640*480 at 4frames/sec!, at lower resolutions
up to 25frames/s).

Here the address for all who are interested:

Woller&link
Grunewaldstrasse 9
D-10823 BERLIN

From: fichti@REMOVE_THIS.wvnet.at
Message-ID: <646aji$nb0@sioux.fr.internet.bosch.de>
Source record: 113821

Hi everyone !

In the past some guys asked for a possibility to connect
their (old) ATARI's to an Ethernet-network.

There was always the possibility to buy an D-Link pocket
LAN adaptor (with an additional ROM-Port interface),
but this solution isn't very cheap and fast.

But now I have good news for you:

On the hompepage of WB systemtechnik I found that they
develop a Ethernet adaptor for the SCSI interface. And so
even old ATARIs can be equipped with that ethernet adaptor
using a common SCSI host adaptor. And that SCSI ethernet
adaptor should be available by the end of the year !

Here the address for all who are interested:

WB Systemtechnik GmbH
Habichtseck 43

> off the cache to avoid some stupid brain dead moves that CAB makes.

If you had read the latest issue of AM (Atari Magasinet som SAK ger ut)
you
would have seen that thre has been some changes from version 2.0 to 2.5.
There were problems with pages like yahoo with 2.5, but they have been
fixed in 2.5. If you trust Jesper Kock, you can safly update to 2.5
insteed
of moaning about a problem in a old obsolete version of CAB.

Check the facts before you start to flame CAB.

There appears to be a rogue file/folder on my HD which I can't seem to remove, it appears to be a corrupt part of the disk and I am just wondering whether or not I can remove it or should I back up everything and re-format the whole drive.

If I have to re-format, does anyone recommend a good backup utility as well as a defragger too, I think I'll stock up on the disk management stuff now.

Kev.

I'm not entirely clear what you're saying here, but the only reason I can see for PPP-C's non-STiK sockets is to tie people into ASH's own clients rather than allowing the choice of clients which would result from following the standard. I can't see how PPP-C's sockets are so much better than STinG's for example: PPP-C isn't noticeably faster, at least on an ordinary STE. Any ASH mail/news/ftp/whatever client could work with STiK sockets if they wanted to make it that way.

If I was feeling cynical, I might suspect ASH of trying to squeeze out of the market the people who created it, ie the programmers who came up with STiK, STinG and associated client programs. I hope that isn't the case.

Cheers,
John

>So .. just one more .OVL to go! I'm not setting up MiNT just for this
>so is there anyone out there who knows if the MiNT .OVL supports
>authorisation?

The last one I posted does not. The one I currently use at home does,
but it's not ready for public consumption yet.

I'm somewhat surprised to see this issue arising now. When I posted the
query in June/July "Does anyone need authorization" I got no responses.
I wrote it anyway because I needed it.

I found that the authorization and security stuff was more important to
me right away, so I haven't gotten to the ftp/gopher clients yet.

My new question for y'all - does anyone use LDAP URLs?

No reason why you can't use the floppies. If you have TOS 1.04 or newer, you can format the disks on the Atari (no extended formats such as 82 tracks or 10 sectors per track) and the PC can read them. The other option is to format 730KB on the PC and the Atari can read and write just fine.

I'd bet you haven't used masquerading ??

> I picked a couple of IP addresses for the spare ST and the MIDI port on the
> main one (1.254.254.1 and 1.254.254.2 with 1.254.254.3 ready for the wifes)

Huh ? The 1.0.0.0 network is a reserved one, you're not meant to use it. Use
192.168.1.x instead.

> # My main ST routing table.
> #
> 1.254.254.2 255.255.255.0 Midi 0.0.0.0
> #1.254.254.3 255.255.255.0 Midi 0.0.0.0
> #
> 0.0.0.0 0.0.0.0 Modem 1 0.0.0.0

This is alright, but you should really use a public network address, like
192.168.1.x

> # My spare ST routing table.
> #
> # Node routing table for my Atari network.
> 0.0.0.0 0.0.0.0 Midi 1.254.254.1

This is alright too, except for the network address like mentioned above.
Note the gateway entry is not used, and STinG in fact ignores it.

> What I want to know is, how do I get the packets wanted by the second
> machine sent to it? I've tried playing with the routing table but nothing
> seems to help.

Your trouble is that the Internet does not know your little Intranet, and
therefore it has no idea that data bound for 1.254.254.2 should go to your
main machine. So the reply does not even get back across the modem line.

Use masquerading which fakes the Internet to believe that your Intranet
is in fact one big machine.

Cheers Peter

Yes the is information that is written on certain tracks that is used for sector size and such. Yes I know that the newer IDE drive have this information on EPROMS. What I am saying is that when low level formatting is done and the Drive controller is properly working, NO NO NO damage will happen to the hard drive. peroid. I have done many many low level formats during work at Disk Drive Repair. The information that you are reffering to is written on Head 0 and on tracks -1, -2, -3. This system was designed to prevent that which you are referring from happening. There is a peice of equipment called a burst writter that sets the inside and extreme outer limits (called bursts). If the hard disk contrioller is properly working (the PCB on the drive itself) this will never happen..

Extended formats WILL work on a PC, but only if the boot sector appears to
be that of a PC formatted disc. FCOPY_3 formats the discs nicely to 820 or
830Kb and I've used them for transfers to/from a PC (both under DOS and
Win95). On top of that, if you've got a HD floppy, the PC will handle
floppies formatted to 1650Kb. It's all in the boot sector. If it's correct,
it works, if not, it doesn't.

2249. Keyboard Mapping

Newsgroup: comp.sys.atari.st
Date: 1997-11-11 00:00:00 UTC
From: ben@imperial.co.uk
Message-ID: <879233988.10244@dejanews.com>
Source record: 113655

Hi All,

Does anybody know of a little utility which
would allow me to re-map the keys on my
keyboard. My Hades uses a PC keyboard, and
some of the keys are not correctly set up.
I assume that this problem also applies to
anyone who has fitted the AT Key, keyboard
upgrade.

Please E-Mail replies.

Thanks.

Hi there

I am in a small dilemma, and I am sure this question has been asked here before, so please bear with me.

I wish to have a hard drive which is compatible with the Atari, Mac and PC - the most important being the Atari and PC.

I have MagiC 5, MagiC-PC and HD-Driver - so what do I do. :)

The SCSI card in the PC is an Adaptec 1542C, and I wish to use my Syquest EZ drive with this and also connect an external hard drive - both of which I will want to use on the PC and Atari, at whim.

Any ideas?

How doe the mac fit in to this scheme of things?

Regards
Danny

It works OK for me (4 Mb Falcon, TOS 4.04, HSmodem v7) *until* it
receives the address from the server. Then it starts to "Initiate Link"
but that always times out. I saw an identical problem to mine reported
on CiX last night so it looks as if it's buggy, unfortunately.

Actually a PC can read a Atari disc. The problem is that Atari uses a
Single sided disc and the PC wants a double sided. So unless you have a
drive on your Atari that is high density/souble sided my suggestion would
be to put all your Atari midi files in a zip file and e-mail them to some
one with a pc. Otherwise I'm out of suggestions. My solution was to buy a
Floptical drive some years ago on my Atari that reads and writes high
density floppies that pop right into my PC. The flopital drives work good
but are only available used if you can find one. they also hold 20 meg on
flopitical discs.

good luck

Hi

Is it possible to have STiNG/STiK use the TCP/IP parameters on a Windows 95 box when using MagiCPC? This would be a very useful feature for me as I now use ISDN on the PC for my comms - the PC is connected to an ISDN router via an ethernet card. I'd like to connect under MagiCPC using this set-up, rather than having to rely on the comm ports and a modem.

Is this possible?

I seem to remember reading in some docs for version 0.26 or 0.28 not to
use any of the older verion files. Maybe this is the problem.

>As it's in English and everything I can't see why it hasn't been supoorted

This might be completely the wrong way to go about it, but I'd use a MiNT based system on your atari (What spec is it?), and set it up to act as a file server for the other two machines. MiNT replicates unix fairly effectively, and unix is a common system used for networking. Post any further questions on the group, since I probably won't be able to answer them.

Cheers
Gerard

The market is US, John, and I can't see what ASH could do to
manipulate it unfairly. We don't have to buy their products.

The STiK/STinG range of clients has an enormous advantage in that they
are FREE and are actively supported in this newsgroup. If ASH persist
in using a proprietary stack it could well be their own grave which
they are digging.

The only area where I AM concerned is the browser. If Dan fell under a
bus and his OVL was not maintained we would lose "stack-continuity"
between the spectrum of clients.

IIRC there's a "DOS-compatible" option in HD-Drivers partition-dialog.

> How doe the mac fit in to this scheme of things?

I don't really know, but I know that people use their Zip-drives on the
Macs at school (the PC doesn't have SCSI) to transfer warez to their home
PC...

There was a vaporware product developed by Atari called the Microbox. This was an improvement on the Falcon platform utilizing a 68040, 32 bit bus and 3 expansion ports. There is word that the Afterburner would work if there was a Falcon-TOS that supported 040 and above processors. I guess that in R&D, Atari must have had a beast like this. Anyone knows any extra information on this and whether or not JTS can be pursuaed to release this TOS. Rumor had it that Steven Cohen's Whizztronics of Long Island, New York was attempting to secure the rights to some Atari TOS licenses. Perhaps he or C-Labs knows the real deal to this story. My guess is that a revised C-Lab Falcon MX perhaps with a 68060 and a Motorola 56011 DSP (backwardsly compatible with the 56001 and has built-in support for Dolby AC-3 surround) would make some killer competition to the WebTV devices. I imagine a starting screen which would present the user with these options: World Wide Web, MultiTOS, GAMES, Multimedia, and MiNT-X. This would utilize STOOP as a boot manager and upon shutdown in Multitos or MiNT-X, the desktop and other system settings for the particular user would be saved in his or her profile settings. The GAMES selection would present a listing of included games by catagory. The main point being is that unnecessary extension wouldn't be loaded upon starting a game. The Dolby Surround sound system would be automatically selected for World Wide Web and Operating systems (MultiTOS and MiNT-X selections). The Multimedia selection would make playing video, CD's, music, MIDI user friendly with Mpeg2,3, AVI, MOV, Video CD, and General Midi support.

Hi Marcello !

It's a pity you didn't come to Neuss Atari Fair, because I have found
Mega ST QWERTY keyboard for only DM20 or $10 !!!!!!!!
Next time in Paris I hope to find more ... A friend of mine, Martin
Byttebier has succeeded to buy one at the same place (Neuss) for only
DM15 or $8 !!!!!!!!!

>couple of them not loading past the first page. Others seemed to work
>fine.

Some people seem to be very lucky with WenSuite, it's not at all my
case :(and above all there are big offline problems coming from the
program itself ....
Have you tried to load local .htm and click on the links ... the most
of the time this doesn't work ... you have to use control R even when
in offline ! This is a very strange way of programming ...
Also I have seen a friend using his registered WenSuite and having a
lot of problems ... from time to time he cannot make any connection at
all, and the connection dialog reacts very amazingly .... some times
the button refuse to act, sometimes you must wait a bench of seconds
or minutes to see if the program will let you connect or disconnect
.. I just name this a hell ...
And above all, I even can't make any durable connection ... only 10
seconds watch in hand and it deconnects as fast as it connects !
Speaking about the HTML interpretation this is really a shame ... some
tags are totally ignored ... have you tried to view your pages in
WenSuite ? It refuses to align the centered pictures and about colors
it's really a catastrophe ... when a cell inside a table shows the
right font color, the following (same formatted) case refuses to show
the text which has the same color ... But I will not continue because
WenSuite has to be worked further and further ... Personnaly I can't
accept to buy this program (even if the price is very low ...) because
there are yet a lot of essential problems ... When CAB 1.5 was
freeware I certainly was very happy to use it and comparing to this
commercial program it's really a shame ... I can't say nothing more
.. You have one chance in USA, you have not seen the publicity which
has been put a long time ago in ST Magazine saying the program was
fully functionnal with Web, ftp, email and news ... and when you
bought it, you began to understand the hell ...
So, enough for today ... I will not buy the program because of its actual
development state.
Let's hope WenSuite will quickly becomes a nice program !!! That's my
best wish of the day.

The first ROM copyright shows up as 1984, but I think the original ST
was marketed in 1985, the STF and STFM followed shortly after. As for
last dates, it depends on what type of ST. The ST was replaced by the
STE around 1990 and then the Falcon in 1992 (I think) which is no longer
in production (I'd say 1993 or 1994), but can be still be found new
(C-Lab Falcons, built under licence).

As for if it's good for MIDI, it certainly is, but all depends on the
software that's running on it. With Cubase or Notator you have a system
that was running in professional studios (and still is in some places),
and is still in some respects better than Mac or PC configurations. If
you want more modern audio capabilities however, you need a Falcon.

You could reformat/partition your drive with ICD or AHDI.
or
Get HDdriver v6 or 7 (v6 worked fine for me until I got my AB040)
or
Try AHDI 6.06u from SoundPools web site
http://ourworld.compuserve.com/homepages/soundpool/

I really don't know what else could be wrong since everything worked fine
before.

Check your boot configuration also.

Shouldn't we all be glad ASH has written a stack, even if it's
MagiC-only? As a Geneva user, when CAB 2.5 drops into my mailbox it's
going to hurt not being able to use the whole package. But at least I
can fall back on the altruism behind the programmers of STiK/STinG and
its clients. If CAB itself used only ASH's stack, then we would have
reason to grumble.

ASH is out to make a 'buck', and I don't blame them for that.

There IS an absolute risk of destroying an old IDE-disk by low-level
formatting it!
Some of them have the information about tracks, cylinders and heads written
on a track and this track is overwritten by other information when you
low-level format the drive, which means that you have no chance at all of
retrieving the necessary information to be able to use the drive again!
Modern HD's have this information written in a PROM on the controller card
on the drive so there is no risk at all with new HD's.

So nice ! I should find a bigger font :-)

So nice, but I have a problem on my STE.

This works very well with MagiC PC, I now can connect STING with
Compuserve in a Win95 window....

But if I do the same on my MegaSTE, the Modem hangs as soon as I
run DIALER.APP !!!

I tried this either on the Modem 1 [MFP] port and the Modem 2 [SCC]
port. I have HSMODEM7 in my auto folder.

Masters help me !!!!

BTW, if another Compuserve members is interrested to test, I can give
my connection program to who wants it.

Thanks for any help.

Sincerely,

Jean-Michel MERCIER.

Forgive me if I'm wrong, but I seem to remember that you have to set STiNG to
be 'active', using the 'STiNG Internals' CPX.
I had that problem 'til I realised I hadn't activated it .... :o)

See ya,

Mark.

The PC should be able to read the disc IF the formatter puts the correct boot sector on the disc. I've had Win95 reading both a 830Kb and 1650Kb disc, both of which it can't produce, with no problems. If you really want to be certain of compatability, format the disc's on the PC then use FCOPY3 to make a new configuration.

To do this, set the tracks to between 80 and 82 (most drives handle upto 82, but not all of them do) and sectors to 10, turn on fast formatting, verify (just to be safe) and make sure the 'get sectors' is set to used. Then click on 'new conf' or press F6. This will convert the disc so it's readable by both the PC and Atari, and gives you a little bit more space than you'd normally get.

That's quite different to what I experience. Often the STiNG kernel reports a cache load error, even though the cache.dns file exists. What confuses me more is the fact that even after this error, the resolver in the dialer seems to read and use the contents of the file when I do a resolve.

I just tried WenSuite on my 040 Falcon/NOVA Mach 64. Even being in French, I don't think it could be any easier to setup. I made a PPP connection with my providers Unix server the first try. I didn't try news or mail. It seemed fast enough for me. I'm lucky enough to have the option for a Slip connection, so I am still using STiK 1.13 and CAB 1.5 without problem, and I didn't see any big speed difference, but it does indeed work fine. I thought the GUI had a nice professional look to it.

Good work from the French guys:).

Ok does anyone know where I can get 1mbitx1bit drams for my ST? They are 5 quid apiece in maplin, and I can't afford to shell out that much on my ageing atari :) I've got 2 lots of 512K in my machine at the moment, will I be able to swap the chips directly or do I need to change things like the capacitors? Also what to I have to change the dipswitches to?

Thanks again

Mol.

2291. Help #1 with CAB

Newsgroup: comp.sys.atari.st
Date: 1997-11-11 00:00:00 UTC
From: Molgrips <cornwell@cf.ac.uk>
Message-ID: <3468C43F.6DF9@cf.ac.uk>
Source record: 113747

I can't get it to work on my new HD properly - using version 1.5 it fails to look in the right place for the .rsc file (looks in the root dir of the partition) and then when I do get it to run, it only gets as far as starting to load the images in the home.htm file and then bombs with about 4 or 5 bombs.

I've tried everything I can think of doesn't want to work. I did have it working off floppy (just) but it doesn't seem to like my hdd.

Cheers,

Mol.

PS I've got a 520 stfm upgraded to 1meg running tos v1.2 I think, system clock says 22/4/87 anyway.

The following software and hardware is up for grabs, any sensible offer considered :

All prices in UK sterling.

Script wordprocessor (like macwrite) 15
Kangkong Sound Canvas editor (magic and hi-res compatible) 20
Twilight screensaver package (like afterdark) 5
NVDI font pack A (5 disks) 12
Vector Xchange 5
Textstyle 5
Imagecopy (3.5) 15
Screen Maker & Video Supreme 15
Adresse (reg) 5
Two-in-one (reg) 5

CD ROMS:

Keyfonts pro (over 1000 ttf/postscript typefaces) 10
Bingo shareware/pd (german) 10
Gemini 1993 archives 10
Suzi B's double-cd shareware/pd collection 18

MISC:

Vidi ST12 colour digitiser : 25

Email Simon at WilliamsSG@cf.ac.uk.

That is strange. I thought the Falcon/Afterburner to be more
incompatible than the Hades. I too am running MiNT, NAES, NOVA ATI
drivers. I left HSModem 7 installed just like the STiK setup. I did
not use OXOs serialbuffer autofolder program.

Are you having connection problems, or just software incompatibility?
It sounds like our setup is about the same. TOS 3.06 should not make
any diffference if you are loading MiNT. Is it Petrs 040 compiled
version?

Mike

CKBD is one. It's a keyboard mapper/ mouse accelerator TSR.
Archive name is CKBD_15.TOS or something.

I think it's fairly common knowledge now that Spider has been binned!
It was never a very realistic goal as CAB was way ahead already, so why
bother. So basically, Spider isn't going to appear *ever*. As for Oasis2,
who knows? Please bear in mind I am *not* Dave or Phil and am not speaking
for them, it's just what I've heard/think :)

TBH, the *only* web browser *is* CAB2!!!

Have you guys got the latest SERIAL.STX, which I posted on Oct. 27th on my
web page ? If not, look out for MODULE.LZH which contains the STX.

For the timeout, check if STinG is activated ("STinG Internals" CPX).

IIRC it was introduced in 1987, and it used to be the first choice for
musicians around the world, for it's Midi port and the sophisticated
music software that puts it to use. AFAIK it's still used by some of
the most famous bands and singers worldwide.

Cheers Peter

MROS itself could be corrupted. Also the audio mixermaps could be bad.

CAF does alot more than AudioTracker so it taxes the system more.

Could getting a Nemesis help, well it works fine for me but I also have
an AB040. A properly installed Nemesis does have the best buffer mod but
as a general rule the max the motherboard can take with SCSI is a 20Mhz
bus.

Hope this helps,

Rich

```
That is exactly what you say :
- dialing, loggin and password with 7E1 until the sentence
"One moment please..." appears
- set to 8N1 to negociate PPP

I have done a small GFA program that does it simply.

Jean-Michel.

You found the point exactly and you understand what i sayed ;)
PPP-Connect is fast, but compatible to what?
If i like to use ANY other client, i have to chance my config.
Also the same while i had a filetransfer, i like to view some web pages
in the same moment, i have to use a slower slip connection :/

A big light is STinG, but it doesen't work on both machines. (F030)
I only got a connect to my isp.

I like to get a working PPP-STinG, a working PPP-STiK, a PPP-Connect
how supports ALL avaiable atari internet clients.

Witch way is equal..

The first socket what can do ALL, that's my socket :)

Regards, Robert

No, its a replacement for Speedo-GDOS that uses True Type fonts instead of
Speedo fonts. I don't know anything about it that isn't on the
ST-Applications page though. From what I read, it seemed as though you
could order the latest beta version of it on one of STA's public domain
library disks. I don't know if that means this file is freely
distributable or not. If it is, I would love for somebody to uplaod a copy
of it to one of the Atari archives (ftp://archive.umich.edu or
ftp://128.120.234.42 or wherever). I'd rather not all the mucking about
it would take to order the disks from overseas if this is PD.

I've got 4meg STE w/adspeed & 2.05. None of the fire buttons work on any of my joysticks. The joysticks themselves still work, but in order to "fire", I have to use the right button on the (beetle) mouse. I've already replaced the keyboard controller chip. Any ideas what the problem is? Yes, autofire buttons are -off-, and it occurs at 8 and 16 mhz.

> and what exactly is a "host adapter?"

Hmm.. I used a normal PC-floppy, and fiddled around a bit with the jumper settings on it, and it works just fine :)

A host adapter is a hardware add-on that enables you to use for example a SCSI harddrive. I think there is an IDE-host adapter, but I would go for the SCSI drive. Or perhaps both, but in that case you need to buy yet another hostadapter.

Good luck

2307. (Falcon) CAF problems.. help!

Newsgroup: comp.sys.atari.st
Date: 1997-11-12 00:00:00 UTC
From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <3469F3BF.A6E1E86E@intuit.com>
Source record: 113696
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,alt.steinberg.cubase

Greetings all..

I've been having some trouble lately running CAF.

Here's my system: Atari Falcon, 14 megs RAM (RAM gizmo board), ScreenBlaster, 2, NVDI 3.02, HDDRIVER 5.10, CAF 2.06, 1 gig Toshiba drive, 2.1 gig Seagate drive, STMIDI3, Steinberg S/PDIF interface (with 20 bit upgrade installed), SoundPool ADAT interface, Steinberg ACI, Fostex ADAT XT, CAFFIX.prg and FDIinit.prg installed, clock buffer mod installed, TOS 4.04.

Here are the symptoms (short version):

--A couple nights ago, I was working on some recordings, and CAF crashed on me. After that, CAF would not work right, although everything else seems to be fine. What happens is CAF 2.06 will load and play the def.all OK (without audio), but the moment I try to play or even access (through the audio pool) previously recorded audio parts, crash city, out to the desktop, and the cursor moves to the upper left of the screen once I touch the mouse. I also tried running 2.03 off floppy with the same results.

-I ran Diamond Edge which located lost clusters in caf 2.06, and restored it from backup, to no avail.

-I have tried booting up without an active auto folder, it doesn't make a difference.. the only thing running is HDDRIVER.

-Last night, I tried working with other HD recording software (Audiotracker demo) which worked fine. ADATREC.PRG worked fine.

-I downloaded a fresh version of CAF 2.06 and MROS drivers, and the same problems remain. This is obviously a CAF issue! I even tried renaming the def.all song with no luck.

Here's the deal.. could it be a clock buffer mod/SCSI issue? If so, would purchasing the Nemesis possibly cure the problem (I understand the buffer mod included with the Nemesis is top notch)?

Is CAF more sensitive to SCSI issues then Audio Tracker?

Does anyone have a clue?

-Mark

> (1040STE/4meg/NVDI/44megSyquest)
> Is it possible to get one of those PC mice and rewire it to work on the
ST ?

There are 2 possibilities.
1 - use a serial mouse, connect it to the RS232 port and use a software
driver.
2 - use a PS/2 mouse, rewire it and connect it to the standard mouse port.
I m afraid I have forgotten how to do that, but it is possible. (I ll mail
you if I come up with anything :-)

> as 82 tracks or 10 sectors per track) and the PC can read them. The
> other option is to format 730KB on the PC and the Atari can read and
> write just fine.

You can format a DD to 10 sectors, 82 tracks and windoze 95 will accept
that space as being there, but earlier versions of windoze seem to ignore
it and decide the disk needs to be formatted.
The only problem I found with doing this is that the copying from the disk
to the ST is made more complicated as I found under Neodesk that I couldn't
just drag n drop the drive to any folder, I had to create a folder and
manually select files.
I think this only occurs if you open the disk, or check the properties of
it under windoze, so just copy straight to it.
I did find a program which said you could connect the PC to the ST via the
parrallel port and transfer files that way, I haven't tried it yet, it is
buried in my HD somewhere.

Kev.

Hello,

Dans l'article <64ct6t$85k$1@cti01.citenet.net>,
Martin-Eric Racine, <q-funk@citenet.net> a ?crit :
??I was wondering if anyone knows of any vector font editor?
??Speedo is preferable, but TrueType or Calamus can work....

For Speedo... it seems there's none, because of licence matters.
For Calamus, there's Type Art 2.0 (Invers), very good (but in
German... and doesn't seem to recognize SL96 printer drivers -> no way to
print directly from it, one must test with Calamus) and Didot (but a little
old and less powerful).
For TrueType I don't know.

??..speaking of which, is there any utility to convert Calamus
??fonts to either Speedo or TrueType?

I know Type2Type (Invers) can do TrueType -> Calamus, but I don't know
if it can do the otherway.

> The market is US,

I'm sorry but I think you're wrong here. Certainly for modern, supported computer systems the US are the market, but that does not apply to Atari. I'm convinced even with their lousy marketing policy Atari had survived if they had concentrated on Europe where (different to any other platform) the Atari computer was stronger compared to competitors, than in the US. Nowadays, Atari clones are built in Europe, but I know of no US company building any. Nowadays the amount of software for Atari that comes from Europe is in no way smaller than the US share.

> John, and I can't see what ASH could do to
> manipulate it unfairly. We don't have to buy their products.

The latter's true for Microsoft products as well, yet they manipulate the market unfairly.

> The only area where I AM concerned is the browser. If Dan fell under a
> bus and his OVL was not maintained we would lose "stack-continuity"
> between the spectrum of clients.

That fear is only enhanced by the fact that it's so difficult to contact Dan. There is no way I can tell him about bugs ...

IMHO someone with a decent understanding of HTTP should have a look whether Howard Chu's CAB.OVL for MiNTnet can be ported to the STiK API.

Cheers Peter

In <EJFJ3L.nI7@suse.modem.stud.uni-hannover.de> Peter Rottengatter wrote:

>So there must be something wrong with your SLIP setup.

My StiK/SLIP setup works perfectly. (A work of nearly 4 weeks)

In most of the time slip is SLOW here.
Only at night times i have nearly the same transfer rate as with ppp.

That's a fact for my private isp, not a joke and not a mathematical example.
I know that slip normaly is the same as ppp, BUT NOT HERE.

ppp allways have full speed, day or night time.
3200cps with a 33K6 Modem in the middle, also the same with my Mac (OT/PPP only)
(More as 5000cps peak)

That's the point for me to get a stable atari ppp socket.
I don't like to use slip for a longer time.

Regards, Robert

Hi,

I have a SC1435 Atari monitor and I would like my Roland sampler(RGB out)
and my 1040 STFM to share this monitor. I use Audiotracker for hard disk
recording on my Falcon and I just need to play the occasional midi file at
the same time from the STFM.Is this a simple thing to achieve ?
I would be grateful for any help.

Thanks

Bill

Yes it is easy and works fine. Format-partition the EZ cartridges on the PC
with the AFDISK program (no win95 format, it0s different) or with HDDRiver
-DOS option, you then will be able to read and write on the disk with long
filenames on the Atari with MagiC 5, on the PC-W95 and on the Mac with
DOSmounter95 ! Really very good.

It really depends upon what you want to do I think. If you get MagicMAc
too then there should be no problems sharing data, MMac has no problems
reading my Atari ZIP disks or my Atari HD.

Greetings,

I'm trying to get a Cyrel Sunrise m16-1280 video card working in a
Mega STE for a friend of mine, but am experiencing problems.

To begin with, we have no printed manual, in the event that the necessary
information may be contained there.

Essentially, after following the installation instructions from the
tutorial program and continuing with the software driver installation, the
system displays 4 bombs and locks on bootup.

Any assistance or direction towards updated drivers would be appreciated.
Please contact me if you are using a Sunrise card.

Thanks!

A PC _can_ read a properly formatted single sided disk. The real problem is that very old ATARIs (the ones with single sided floppies) had a very old TOS version (like 1.0, 1.2), which doesn't format disks exactly as PCs do. TOS from 1.4 on and most utilities (Fastcopy, Ecopy etc.) can format a DOS compatible disk without any problem. However, things are not that easy. Windows 95 adds some information that is not compatible with the initial DOS specifications, so if you copy something from ATARI to PC on a DOS formatted disk, it will work OK, but not if you copy things through WIN95. Always use plain DOS on a PC to play safe.

Quite a few drives can be used as replacements. Look at the FAQs on
Hallvart's site for how to do it.

>Also, I have
>2 spare drives 240M SCSI and 250 IDE... Which would go with the Atari

The SCSI.

>and what exactly is a "host adapter?"

It interfaces between the Atari ACSI-speak (which appears at the DMA port)
and true SCSI-speak. Look for AdSCSI, Supra, Link devices.

> at fault here.

Maybe, but I still think AES 4.1 is almost as stable as MagiC, alot more
stable than MagiC in some cases and the other way around in some cases.

With AES 4.0 I don't know as I don't use it so I guess you could be
right
about that being unstable.

What annoys me most is the _lack_ of memory protection in MagiC and it's
the biggest problem with MagiC as I see it. Okey, it usually a problem
caused by a poorly written program which goes highwire with the memory,
but how funny is it to reboot the computer just becuase MagiC complains
about memory block destroyed and then refuses to do anything?

:-(

Another rather amusing thing is that ASH have put up a link about how
bad the
memory protection is in Windows and apparently they think it's quite
amusing. The funny part is that MagiC is even worse then both Windows
and MacOS
in that respect. Atleast MiNT have got some proper memory protection on
a 030. That doesn't help me either though as I have got a 040. :-(

Actually I would say that the Falcon with a AB040 is much more
compatible then a poor Hades ever will be. I have even had some
better success with old ST games on the AB040 than I had before
I fitted the 040. After all the 040 is said to be more compatible
with the old 68000 then the 030 ever was. Then the fact that I
couldn't get the game to work properly on the AB040 either is
another question, but I did get longer before a crash with the
AB040 then without the AB040.

I was going through Best Electronic's Rev 10 catalogue last night
and I notice that they have a SIMM-based RAM board available called the
New World II for $99 US- it solders into place. Knowing Brad's other
hardware stuff, this looks like it should be up the the same high
quality standard.

I would try the newest version of Spin (Spin034). Certain problems have
been corrected. Perhaps this one belongs to one of them.

Hi Gary, Many thanks for your prompt reply to my query re Oasis/Spider. I
rather thought that might be the case. It would be rather nice though if the
Oasis/Spider login button could be made to call up CAB, because, in my case
so far I've only had a month's use of Cabv2 on STiK, only to lose it without
further activity from it, and so far v2.5 refuses to configure PPP, even
with MagiC. I've tried Ollie's script (demon.ip.support atari) but it always
ends in hanging up the modem. Cheers, Nigel.

Price reduction. $50 + shipping for the lot!
***

I recently acquired this hardware (well, it was recent the first time I posted this!), and to be honest, "my eyes were bigger than my stomach" (i.e. not enough room). These Atari items were gathering dust, so a good
cleaning in and out would be in order. I have no manuals, software, or original boxes, just the hardware.

In any case, here is what I have for sale:

Atari 520ST w/PS
Able to get it to boot up into the GEM desktop (no mouse to use) and using the alt-arrows able to move around a bit. Seems to be working fine. Not sure what TOS version, as all it said was TOS.

Atari SF354 w/PS and connecting cable
No diskettes to test with, but whirs, clicks, etc. when booting the ST. Looks good...but buyer beware since I cannot test it adequately.

Atari SM124
Seems to work fine and looks good. Just a hint of a picture "wobble" at left corner. Didn't seem to be annoying...but thought it worth mentioning.

Location of items is: Houston, TX.
Send offers/inquiries to: dennis_cooper@administaff.com

Thanks for looking,

Dennis Cooper

2336. Magazines for sale

Hi!

I want to sell my Falcon with following components:

Hardware:
Falcon-TOS 4.04
32 MHz Skunk CPU-accelerator
4 MB RAM
548 MB SCSI-Harddisk (external; no internal HDD)
FPU 68882 Coprocessor (20 MHz)
BlowUP Video Extension (Hard 1) for High-Res.

Software:
MagiC 5 and 5.04 OS
MultiTOS OS :-)
Speedo GDOS 5
Ease 5 Desktop
Graoumf Tracker (32 Tracks)
lots of German Shareware (CAB 1.5, 7UP, ...) and tools for MagiC
some more Apps and about 300 MB of Free- and Shareware and PD

...and the price? You can have it all for DEM 800,- plus transport costs. So you best live in Germany or anywhere nearby :-) If you re interested write an e-mail.

Christian

I'm actually pretty sure this is the case. Of course they won't admit it.
I'm not even sure if they's admit it to themselves. Their immediate goal
is probably just getting a share of the market, but once aquired they will
look out how to extend it and of course proprietary protocols are a neat
way to do it, as Microsoft has demonstrated.

In any case, I'm confident that they won't succeed. PPP-Connect and asso-
ciated software is commercial, while STinG is free. While one could argue
whether that is actually in favour of anyone of the stacks, STinG and STiK
have a large base of established clients and servers, and a large base of
installations. PPP-Connect has only one client, no servers, and the amount
of installations will forever be limited to systems with multitasking.

I'd be really happy if he tackled it, and it even won't be very difficult
for someone knowing the code as well as the author does. But I fear he's not
much interested in it, being an intrepit MiNT / MiNTnet user ? ;-))

> bit carefull :) I DO NOT use ST_Tools as an optimizer on my HD's.

That's weird. I've only had one problem with ST_TOOLS (v1.93), and that was
while optimising my hard drive. The problem was it tried to write to a bad
sector on the disc (not marked at the time). It cancelled the operation and
there was no data lost.

It may be a bit on the slow side, but it's never done anything bad to my
disc's. In fact, it seems quite good at the optimising/defragging the drive.

I've not had experience with any other version, but this one hasn't caused
me any problems.

True, but I am concerned in case they rig CAB so it will only work
with PPP-C in a future release.

>The STiK/STinG range of clients has an enormous advantage in that they

Which would be a shame as they produce some great software. I just
wish they'd re-do PPP-C to match the STiK standard. If their news and
mail clients are good enough they'll sell anyway, regardless of the
stack. If they are PPP-C only, they won't sell half as well but that
may prompt them to cut other stacks out of the equation WRT CAB :-(

>The only area where I AM concerned is the browser. If Dan fell under a
>bus and his OVL was not maintained we would lose "stack-continuity"
>between the spectrum of clients.

Likewise if ASH change the CAB/OVL interface and won't release the
details to other programmers. Call me paranoid...

John

k> There appears to be a rogue file/folder on my HD which I can't seem to
k> remove, it appears to be a corrupt part of the disk and I am just
k> wondering whether or not I can remove it or should I back up everything
k> and re-format the whole drive.

Dont re-format at least untill youve tried Diamond Edge or CORRECT to
assertain what the problem is, it might not be as fatal as you think. And
then, before you re-format do a non-destructive cluster check and mark bad in
case youve got a duff cluster.

k> If I have to re-format, does anyone recommend a good backup utility as
k> well as a defragger too, I think I'll stock up on the disk management
k> stuff now.

HD-DRIVER allows formatting and partitioning, backup utils depend on the
destination media.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

As it says above, I have an SM124 for sale. No burn in, looks good.
I'd like $30 + shipping. Thanks.

Source record: 113594

Hi,
Im looking for a game I used to play on the ST way back in the
80's.. it was a french game if I remember, called 'eco'.

you started of as a low-life form, such as a worm and had to evolve
by preying on other life forms and avoiding being squashed.

I searched for it on the Games search engine on the little green desktop
which claimed it was on the 'Automation 18' disk set.. has anyone got
this.. am I going mad?

ttfn,

oh, btw the email address is majik @ mudhole . spodnet . uk . com
(but without the spaces ;)

I'd just want to point out that STiK/STinG does *not* use sockets at all,
but a strange (and compared to sockets, perverted ;-) API that doesn't
look like sockets at all.

MiNTnet and PPP-Connect both use sockets (so does TermiteTCP, but will it
ever be released?) so porting clients between them should be fairly easy
as long as ASH provide us with proper (English!) docs and bindings.

Cross-posted to: pdx.forsale,or.forsale,pnw.forsale,pnw.wanted,comp.sys.atari.st,comp.sys.atari.st.tech

Looking for an Atari Mega 4 ST. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade. I need to test the Mega 4 ST before I pay. I was recently burned by an old friend who said the Mega worked. He couldn't refund my money. I can't afford to be burned like that again. Please do not reply here as I dont read message bases. Please direct your reply through E-Mail to bensmith@teleport.com or call Ben at: (503)256-9974.

P.S. I'd need to keep this transaction solely in the United States.
--

If you wan't me to read any response from you, do not respond here,
Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Nope. Extendos is one CD-ROM driver set, SPIN! is another.

The XFS in SPIN (for MagiC and MiNT) is able to mount HFS disks. I
was commenting previous mails that read:

!>> I tried out a couple of Adobe CDs, > but was not able to read them. Got an
!>> error message and then the only > thing in the directory was

>
>George

Newsie only recognizes Bitmap GDOS fonts. You need to use
a special font that remaps characters 160-255. For 8859-1
(Latin) mapping I have made proper font (see URL below).

The real problem is, AntMail, Newsie, and Oasis are written
by english native-speakers, so proper usage of ISO encoding
is ignored because they don't need it, since ASCII 0-127 is
enough for communicating in english (7-bit is enough).

I am presently working on a new Mail/News client that requires
Speedo or, better yet, NVDI 3.1+ and uses the 16-bit Bitstream
character map to cover a variety of ISO mappings (Latin, Greek
and others). Read the Atari Compendium's pages G.7 to G.30 for
an idea of the possibilities.

Please don't flood me with mail requesting WHEN it will be out!
Creating all those character-conversion maps take a LOT of time....

However, check this newsgroup and the STiK page often. ;-)

Yours,

If it worked before and audiotracker works I wouldn't suspect this.

> Is CAF more sensitive to SCSI issues then Audio Tracker?

I wouldn't think so. Maybe the DSP has blew? Have you tried another
program which you knows use the DSP like Bad Mood, any MPEG player
or something else?

It sounds like it could be the DSP which has "melted".

From: dreibel@idirect.com
Message-ID: <346b1b3f.0@nemo.idirect.com>
Source record: 113611

TAF/SONGBIRD SIG NOVEMBER 15th!

On November 15th, 1997, both the Toronto Atari Federation (TAF) and Songbird Music will present a Special Interest Group presentation for all users of Atari/TOS computers. This event is designed to help all Atari users find out just what support is still out there for their choice of computer, and just what an Atari computer is still capable of!

Among the things that will be presented:

- Internet and the World Wide Web - Dan Dreibelbis will be demonstrating the variety of different programs for utilizing the different features of the Internet, including Usenet, the World Wide Web, FTP, IRC, and e-mail. He'll also be bringing his homemade SCSI hard drive setup and explain how to go about putting one together. There also may be other surprises from him as well :)

- modifications and memory upgrade - James Alexander, Jeff Thomas and Ken MacDonald will discuss about bringing your STs up to speed and to put in the most RAM possible

- advice on how to get the most out of your classic Atari computer both from a hardware and software standpoint

- Aage Nielsen will be manning a special version of the TAF software library - pick up Internet and MIDI PD/Shareware as well as related utilities.

- Martin Neuland will be there to sign up any interested new members to TAF.

-

more on this as details become more cohesive.

Admission - FREE.

Time - 12:00 - 6:00 PM

Location - 801 Queen St. West, Toronto, Ontario, Canada

Get in touch with Dan Dreibelbis as dreibel@idirect.com or Mike Flock at sales@songbirdmusic.com for more info.

Yes, Win95 does alter the boot sector, but it's still quite possible to
transfer files too and fro between an ST and Win95 PC. I've done this with
both DD discs at 830Kb and HD discs at 1650Kb.

The only changes that occur are at offsets $03 to $0A in the boot sector.
Win95 modifies the boot sector at offsets $04 to $07, placing a 4 byte
serial number here. Offsets $08-0A are replaced with "IHC", and offset $03
is replaced by '('. The effects of these alterations are of no consequence
to TOS, since it only seems to look at offsets $0B to $1B for information
on the disc format.

DOS, on the other hand, looks at offsets $03 to $0A to decide what version
of DOS formatted the disc. It finds that there isn't the "MSDOS?.?" there
and, usually, complains about the disc not being formatted under the present
version.

Back to the first paragraph, it seems that apart from these modifications,
nothing else seems to happen to the disc and the discs are perfectly
read/writable with both machines.

I would try ATY Computer in Oakland, CA.. or Computer Direct.

Yes, the module is commercial. It comes with the Style Trax module (kinda Bandinabox), and the CueTrax module (graphical temo editor/master track editor, wierd but cool).

I bought mine a coupla years ago for $150.

You can install MinixFS on any disk as long as it's recognised by TOS.
You'll need a XHDI-compliant driver though (hushi, cbhd or hd-driver),
certain versions of AHDI works but some don't. And the ICD-drivers
are a definite no-no.

FIRST THE SOFTWARE:

1. IMAGECOPY 4 CD $17 (converts between Jpg, Gif, Tiff, Img. You can even print. It's a very clean application.

2. TRUEPAINT V 1.02 $19 Excellent drawing program; all resolutions and colors. Works in ALL ataris. From B\W. to true color.

5. PHOTO SHOW 1.0 by It's all relative: Create multimedia presentations audio-video; Also watch kodak photo Cd's in PCD format. This prg. will go with PCD sampler vol CD-ROM $20 (Falcon)

6. MIDI QUEST 4.0 $25 (Synthesizer sound editor) I have file list , will send upon request. Works on Falcon also.

7. STALKER 3.04 $19 Get connected with this reliable terminal program up to VT 220. A wide range of setups. All Ataris. Interfase with Steno(see Steno) excellent XYZ modem transfer module. Works as a prog. and Acc!!

8. STENO 2.10 $19 Interfaces with Stalker: You can cut, copy and paste from one to the other. Also Works like Prg or Acc; you can even run it as many times as you want and you will have the "copy and paste" option between them.

9. PAGESTREAM V 2.01 $20 Excellent DTP prg. Box with comprehensive documnetation.

10. CALAMUS $35 seven disks. The Ultimate Atari DTP prg. From making of complex DTP documents. It comes with several modules.

CD ROMS: Both CD roms can be read by a PC also, format compatible.

11. GEMINI Atari thousand of shareware and public domain prgs. $11
12.CRAWLY CRYPT collection V. 1 more public domain and shareware (even Falcon).$11

HARDWARE

14. Atari SM 124 excellent condition: $20

15. Intel External 144e (14.4Kb) FAX/MODEM with cable for Atari $43. (has original sotware PC)

16. Beetle MOUSE $15 This one does not need accelerator software to run fast and accurate. Nice red color and easier to move around than the classic one.

17. FALCON 030: 4 MBRam *Tos4.04*IDE 85MB*WITH SREEENBLASTER AND MATH COPROCCESSOR, ready for Cubase Audio (was running CAF!) since the Analog in-outs were modified according Steinberg's suggestions. All ports work. It has had not too much use and it's full setup to go. Currently I am using it with an SVGA and/or SM 124. Hard disk does NOT have bad sectors. It boots up fast and runs great.

Play movies MPEG, see GIF's and JPG, etc, in true color. Record to hard disk up to 50Khz/ stereo, (add effects to your recording also) using the software included (Direct to disk -IDE also), see multimedia animations from the net (for Falcon), have a blast with it! :-) This is the PERFECT upgrade if you have been using Atari.

The OS (TOS 4.04) is much more stable than the one found in early models :) (No offense! -but it is true!-) The SCSI 2 interfase rocks. Works like a charm and will allow to plug into every SCSI
device you want to use. Be welcomed by multicolored icons and the easiness of a 1.44Mb. drive. Man! it even has a little speaker built in! fully controlled by software.:) $ 550

Free stuff:
Modem 1200 internal
Atari Ste language disk English-USA CA 400607-001 Rev B
Ultimate virus killer UKV 5.9

If interested send ZIP code to ask UPS for charges. I am willing to go down in the prices if you buy more than 2 items. For software with light weighted documentation, I can send it for $3.00 priority mail. Regards, Phil.

2385. Q: What PC mouse to buy & how to rewire it to work with an ST

Newsgroup: comp.sys.atari.st
Date: 1997-11-13 00:00:00 UTC
From: flux@thing.net
Message-ID: <flux-1311970714560001@sl7.thing.net>
Source record: 113707

Hello

Since I do a lot of work in Cubase, I'm mousing around quite a bit.
For the past 9 years I've been using the ST mouse.
(1040STE/4meg/NVDI/44megSyquest)

Is it possible to get one of those PC mice and rewire it to work on the ST ?

Thanks!

Regards

Frank

Tom Verette (rltyexec@earth.execpc.com) wrote:
: I've got 4meg STE w/adspeed & 2.05. None of the fire buttons work on any
: of my joysticks. The joysticks themselves still work, but in order to
: "fire", I have to use the right button on the (beetle) mouse. I've already
: replaced the keyboard controller chip. Any ideas what the problem is?
: Yes, autofire buttons are -off-, and it occurs at 8 and 16 mhz.

Perhaps the connection between the joystick socket and the PCB has become
loose. I have seen a number of cases where this has happened with the
mouse, but perhaps it also happened in your case with the wire that
carries the fire-button signal.

We fixed these problems by soldering the sockets again where the joints
had broken.

In article <3469F3BF.A6E1E86E@intuit.com> you wrote:
: --A couple nights ago, I was working on some recordings, and CAF crashed
: on me. After that, CAF would not work right, although everything else
: seems to be fine. What happens is CAF 2.06 will load and play the
: def.all OK (without audio), but the moment I try to play or even access
: (through the audio pool) previously recorded audio parts, crash city,
: out to the desktop, and the cursor moves to the upper left of the screen
: once I touch the mouse. I also tried running 2.03 off floppy with the
: same results.

We're having _exactly_ the same problem.

It started when we repartitioned our 2GB Seagate disc. Previously CAF was working correctly, but after repartitioning the disc it started crashing exactly as you describe.

This suggested that the problem was related to the disc in some way. But no matter how we partitioned the disc after this, the problem would not go away, it seemed.

After endless experimentation we have got it going again, although I don't know why. All I did was repartition it and suddenly it started working again. I don't how many times I had repartitioned before this happened! The trouble is this scheme that worked is 5x 400MB partitions which is not a good scheme (I prefer 2x 1GB partitions). But I'm concerned now to repartition again in case the problem returns. I also did have the problem go away occasionally at other times, but rebooting would bring it back again.

I don't really know whether the problem is in fact related to the disc partitioning. I suspect that it may have been coincidence, since the problem does sometimes go away and come back independant of repartitioning the disc. I'm wondering if it's a hardware problem.

There is another problem that I was observing before this all happened. When I first got the machine it was working very well, but since then this other problem has come into effect slowly. The sound sounds very distorted so that it cannot be properly heard when this problem occurs. To fix the problem it is necessary to choose the audio source again from the popup menu in the Hardware Setup dialog.

Then this crashing problem started happening, the same as what you observed. I wonder if this distortion problem was leading up to the crash problem.

I don't know if this is related to the problem, but with Diamond Edge 2, when I try to partition the disc or save the "SCSI info", Diamond Edge reports that it cannot read the root sector. I don't believe that it used to do this.

The other problem that I have observed is that sometimes one can record some audio, but when the audio is played back you can hear something totally different - even audio that has previously been deleted! Have you seen this problem?

There are several modifications for the Falcon, and we wonder if it may be necessary to try these. This is what we will be doing.

Please let us know if you find out anything further about this problem.

Since when has CuBase Audio worked with IDE drives?
Okay...I know you can store midi files, and run CAF itself from an IDE,
but you'll NEVER get CuBase Audio Falcon to write audio (or read it) from
an IDE drive.

Format your disks on a PC at 720K not 1.44meg. These disks can then be
read and written to on the Atari and they will also read on a PC. PACMan

> and what exactly is a "host adapter?"
You can use just about any floppy drive but you will be limited to 720k (double density) I have used HD drives but they would only run at 720K. As far as the Hard Drives use the SCSI but you will need a host adapter to convert the AtariSCSI to SCSI format. PACMan

2396. WTT: Mighty Sonic 32 for Expose

Newsgroup: comp.sys.atari.st
Date: 1997-11-13 00:00:00 UTC
From: 404on040@remove2reply.iwvisp.com
Message-ID: <64ebg4$404@news.iwvisp.com>
Source record: 113718

Ok, you guys are getting tough. Lets see if you can hold out on this one. I want to trade a Might Sonic 32 with 16mb of 60ns fast ram for a complete Expose unit and splitter in perfect working order. I know that some do work properly. The Mighty Sonic is kind of like the Afterburners little older brother. It will work with a Nemesis (if you know what your doing) up to 40Mhz. It installs just like the AB. It's about 99% compatible with software. It dosen't speed up the system to awfully much, but you can add another 16megs and have 32mb of fast ram plus what ever amout of st ram you like (4 or 14). The fast ram is where you really see the performance. You need to solder 8 wires to install it, and lift two pins from your cpu. Fully compatible. This card has had a modified buffer installed onboard. A buffer like the one that comes with the Nemesis is highly recommend for proper DMA operation.

Email me for details.

That's impressive! Mine started playing up since the beginning, and is
really uncomfortable. Wow! 9 years!

> (1040STE/4meg/NVDI/44megSyquest)
>
> Is it possible to get one of those PC mice and rewire it to work on the ST ?

The answer is in the Quick FAQ. You can rewire a PC bus mouse (the ones
that plugged into a PC expansion card), but these are nearly as hard to
find now as atari mice. A serial mouse can be used with a software
driver, but it will take up your serial port, so it's excluded if you
have modem or an extra serial-midi box.

If I were you, I'd stick with an atari compatible mouse. You can get
them from any remaining atari dealer. You'll find links in my Quick FAQ
too.`

The problem might be that CAF doesn't support partitions > 512 MByte?
For standard applications the partition size and the partition
parameters don't matter. But for applications like CAF which come with
their own routines for hard disk access it can make a difference.
On the Falcon partitions up to 1 GByte with a logical sector size of
16384 bytes per sector and 2 sectors per cluster are legal. With these
parameters you can have partitions up to 1 GByte.

Well, the result still is a useless harddrive, so it's not wrong to say
that there are some (older) IDE drives which get damaged when formatting
them. Period.

Ciao

ROTFL!!! Whoops, Peter - I mean't "uns", "nous" etc. with emphasis!!
Really shot myself in the foot there! With this understanding I guess
we are now in agreement.

>That fear is only enhanced by the fact that it's so difficult to contact
>Dan. There is no way I can tell him about bugs ...

I managed to make contact 3 days ago to tell him that the archive of
CAB_OVL v 1.2619 on his server was corrupt. He was just on his way to
see "Bean" - it's been very quiet since - perhaps he is still
laughing.

>IMHO someone with a decent understanding of HTTP should have a look whether
>Howard Chu's CAB.OVL for MiNTnet can be ported to the STiK API.

Ah. THERE'S a good idea! And Howard will soon release his version with
users authentication.

2410. HP 672C and NVDI? Help!

Newsgroup: comp.sys.atari.st
Date: 1997-11-13 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <64f3j5$s7p@alexander.INS.CWRU.Edu>
Source record: 113732

Does anyone out there have an HP 672C printer using it successfully
with NVDI?? Or, does anyone have problems like I do?
When trying to print a color image, whether from CAB or Kandinsky,
it prints about 2-3 inches, and halts with the yellow error light flashing
for several minutes, and then usually resumes, prints another 2-3 inches,
and halts again, etc.
I am using NVDI V4.11 r3, but have the latest pageprn.inf that
includes the 660C and 850C. W. Behne, the creator of NVDI, says its not
a problem with NVDI, but that he can't test it because the 672C is not
available in Germany.
It usually prints B/W images ok, and text is fine. I only have
problems with color images.
ANYONE who has a color HP672 and NVDI, please let me know whether
it works for you?

Boris

Unfortunately, I haven't been able to find any way of suppressing
blank lines within AtariWorks, other than moving fields about in the
database prior to mail-merging.

Superbase Pro allows you to build GDOS-based reports or you could
always use your Superbase database file for the mail-merge source and
use Papyrus!

I don't think this is quite true; those of us who have become
attached to CAB now have to buy upgrades from ASH.
And more unfairly, we HAVE to pay for PPPconnect as part of the CAB
package.
How many people would purchase PPPconnect if it was available
separately? I certainly wouldn't now that STing is available. And you
need multitasking for PPPconnect too.

Cheers! Simon :-)

Well, isn't Magic 5 supposed to handle VFAT filesystems? In that case, a
disk partionned on the PC should be readable on the Atari side with Magic,
and even long filenames should be kept. Am i wrong?

> How doe the mac fit in to this scheme of things?

Do the Mac handle VFAT? If it does, it shouldn't be a problem.
Bye and good luck.

There is no faulty data that I know of as such, but it could easily be some file I haven't used for a long time.

This is exactly the same problem that I am having. the
initialisation and password authorization are completed sucessfully and I
get a dynnamic IP addres assigned, but I can't ping anywhere so obviously
CAB, Newsie, etc, won't work at all. Strange!

I had heard that perhaps some patch for Trumpet Winsock (PC TCP/IP
driver) at the ISP might be a contributing cause.

>There appears to be a rogue file/folder

which?

>on my HD which I can't seem to
>remove, it appears to be a corrupt part of the disk and I am just wondering
>whether or not I can remove it

Depends on the problem and how much you know or are prepared to find
out, and how important the faulty data is to you.

>or should I back up everything

Whenever I back up it turns out the problem is easily fixed and there
was no need to back up. On those few occasions that I haven't bothered
with backing up the "easy fix" invariably ends up with me losing a
lot of valuable data!!

>and re-format the whole drive.

This is only needed if the hd has physical defects so that a new bad
sector list can be generated in order to skip the dead sectors. Even
so, it is possible to map out physically dead sectors logically by
marking them as dead in the FAT - I'm not sure how well tos implements
this though.

For logical defects the worst you will have to do is "zero" the
partition containing the faults. The hd itself is actually working
fine but has had garbage written in important areas (typically the FAT
or directory structure).

Many utilities exist which can scan the FAT and directory structures
looking for errors in them. Some can be fixed by utilities, some
cannot (or should not). You should always run one of these first to
give you some idea what sort of problem you have - but never let it
fix any problems it finds until you understand exactly what the fix
will be doing (some fixes are worse than no fix)!

>If I have to re-format, does anyone recommend a good backup utility

There are different types of backup. Some do it on a file by file
basis (and might give up on coming across the faulty parts), others do
it simply by copying hd sectors directly to floppies. These second
sort are not likely to give up on logically faulty sectors (but should
at least tell you of physical faults) but if you ever need to use the
backup you'll end up with the original faults restored as well (aside

from problems restoring if the hd partition size has changed)!

>as well as a defragger too,

Do *not* run a defragger of any kind atm! Defraggers are probably the most reliable way to mangle all your data when run on a disk containing faults.

>I think I'll stock up on the disk management stuff now.

Try Knife-ST for starters. If, as I suspect, you have a logical fault, it will almost certainly tell you about it. It was given away on (iirc) an ST-Format cover disk ages ago.

Kobold is immensely useful also.

Yes, even on a floppy disk if you want.
But well IDE VS SCSI in a multitasking OS, will make the difference.
Example: everytime you will run a program or access your ide, your
computer will considerably slow down.
On scsi, it's way smoother.
But well, in short, MINIX on everything is fine.

You use the one which your ISP provides...
> + e.mail:- k.lever@zetnet.co.uk +

For zetnet, you need to add the following in the http-proxy line in CAB:

bess-proxy.zetnet.co.uk:8080

Proxies are needed with CAB so that you can browse http 1.1 protocol web
sites (CAB and CAB.OVL are not http 1.1 compliant yet).

Not true for MiNT! MagiC is able to do background DMA under certain
circumstances, but to get "real" background DMA you'll need Linux
or NetBSD. If you use a TOS-compatible OS IDE will usually be faster
than SCSI, atleast on Falcons.

Btw. background DMA-transfers under MagiC 5.01 and HD-Driver 6.30 is
extremely slow here, it's only slightly faster than floppies. Does
anybody know what's going on?

d> What's exactly about ? I'm interested by a font editor ... is it ?
It's not, it's a GDOS replacement that's capable of using TrueType fonts as
well as the more familiar bitmaps.

There aren't any TT font editors for the Atari as far as I know.

Speak to 'ya later!

2439. Member, Atari T.A.G.

Newsgroup: comp.sys.atari.st
Date: 1997-11-14 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <879526430_OASIS_@pcc-uky.campus.mci.net>
Source record: 113562

I was reading through some messages in different newsgroups the other day,
and I noticed a trend with OS/2 and Amiga users:

Team Member OS/2 Warp
Member of Team Amiga

Well, I kinda like that concept and think that we should do the same
for the Atari community. My 6-year old son, Kyle, is in 1st grade and
is in the T.A.G. program (Talented and Gifted). I think this would be
great for us Atarians!

Member, Atari T.A.G. (Talented And Gifted)

We could even have a small logo: ---T---
-A-T-A-R-I-
(note its 4 lines or less!) <grin> ---G---

I think that a select group of individuals who are doing supportive
activities for the Atari community should be members. For example:

(please note that I'm only using examples-there would be many others)

Progammers/Coders: People like Douglas Little, Peter R. (STing),
Alexander Clauss, and members of the demo coding
scene...
Dealers: Floppy Shop, TUS, System Solutions, etc, etc, etc,...(and
don't forget dealers in other countries)
Publishers: Atari Computings support crew, Disk magazines, etc,..
Show Organizers: Mike Goodman comes to mind
Sysops: Anyone dedicated (read crazy!) enough to spend the time/money
on a dedicated Atari BBS deserves to be a member! :)

I'm sure there are plenty of other categories to choose from. This is
just meant to get the ball rolling. The one single theme would be any
one who is actively contributing to the Atari scene...

Okay, so who would arbitarily judge who is qualifed to be a member? Well
I was thinking that the support team (editors/writers/etc) from Atari
Computing would make a very good (and impartial) panel.

I E-mailed copies of this message to Mike Kerslake, Joe Connor, and Rich
Tietjens about a week ago, but so far, only Rich has responded. Rich offered
to setup Web space for nominating and voting on T.A.G. members.

So what's to be gained by doing this? Simple this; to encourage low profile
Atari users (we know you're out there!) to get up, get out, and really start
supporting our fav. platform and be rewarded with the Honor of displaying the
Member, Atari T.A.G badge...

So what do you guys think? <grin>

2441. A decent text viewer for ST?

Newsgroup: comp.sys.atari.st
Date: 1997-11-14 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <879550426_OASIS_@jaubrey.demon.co.uk>
Source record: 113564

Is there a decent text viewer out there? I once used one by Mountain Software, but is caused weird things to happen with the HD. It'll need to be installad so you'll only have to click on a TXT file and it'll autoload. The text viewer it ST+ #22 would be perfect, if a stand alone programme. Any ideas anyone?

Thanks,

James

>That's impressive! Mine started playing up since the beginning, and is
>really uncomfortable. Wow! 9 years!

The poor old Atari mouse is much maligned, in my opinion more so than
it deserves.

I have two. The first I bought with my 1040 in 1988 and it's still
going strong. Its only problem is the small diameter of the rollers,
which tend to pick up dirt faster than those in the mouse that came
with the Mega STe in 1991 and which has never missed a beat either.

As for sensitivity, both are fine enough to move the mouse pointer a
pixel at a time without difficulty . What more can you ask?

I also have a sexily shaped mouse branded TechnoPlus. It looks very
nice but occasionally has a mind of its own. For no apparent reason
the mouse pointer goes on a stately walkabout across the screen,
either horizontally or vertically. If the latter, it will even open a
menu item if one gets in the way. Neither of my Atari mice has ever
demonstrated that ability.

> For the timeout, check if STinG is activated ("STinG Internals" CPX).

I fetched that archive, Peter, changed the STX and checked my settings
but it made no difference. The connection works fine as far as
receiving the address, for me, but when the Dialler changes to 'Link
Initialisation' I get a 15s countdown and the line's hung up every time.
The modem's RX/TX lights (I'm using a USR Courier V34+/X2) flicker so
something is happening but clearly not what the Dialler is expecting.
Can you suggest anything else, please?

My machine is a TOS 4.04, 4Mb Falcon, using HDdriver v4.52 and HSmodem
v7. I'm trying to keep as clean a system as possible so I'm only
running a couple of TOS 4 patches in the AUTO folder besides STiNG,
plus XControl and ST-Guide as ACCs.

Regards,
Keith

I get the same thing, although the timeout is longer. But I'm curious...
when you first activate STinG, does your modem TX light up? For me it
does, even though I'm not connected yet. As a test, I ran STalker to see
what was being sent into its buffer: everytime the TX lit up, the same
10 or so bytes were sent, with a slight pause between the repeated
transmissions. It does this only when PPP is selected.

I have never heard of a public proxy server,(I am not saying they
don't exist, only that I never heard of one), have you asked zetnet, I
would have presumed they have the proxy server and they will give you
the information you need ? :)

Source record: 113633

Hi, I just picked up an old Atari 1040ST with no software. I'd like to use this computer in a
robotics project I'm working on, and would like to know if there are any assembly language compilers available for it, and where. I'm currently programming asm on my PC, but don't want to
"dedicate" it to the robot. Thanks for any help!

> else;).

That would be me :-) And yes, I find it braindead compared to sockets, but
we have to keep in mind that the purpose of STinG was to make a STiK
rewrite. So naturally it has to keep the API!

> Also using the MiNT-Net API would also make it possible to port a
> trillion internet clients from Unix without to much headace (I wonder
> where I got that from Jo Even).

Yes, porting unix-clients is quite easy (e.g. to port NcFTP - perhaps
the ftp-client - you only need to type 'make') but you usually need
MiNT to be able to run them...

I haven't noticed the TX light come on, Neil, but that's not to say it doesn't! I did get some oddities when I opened the Dialler until I saw a message saying not to activate the port, an option in one of the CPX's. Now when it launches one of the four lights on normally goes out and I have to select Enable to dial out.

It's comforting to know I'm not alone in having problems, though not for Peter I guess! <g>

Regards,
Keith

> I have some gif images and I want to make a gif animation for a www page.
> Is there any program for the Falcon that does this thing?

Indeed there is!
If you have access to a web browser, direct it to the following url.

http://www.magmacom.com/~nima

The program you want to check out is called MPlayer...it does MOV,
AVI, FLI, and finally Animated Gifs. You can of course display the
animations. You can use a text editor to
assign your sequence of images, and Mplayer can pack them into one of
those animation file types for you! Mplayer also supports sound on
the Falcon...so you can view and hear those as well.

There is a small charge to register MPlayer to its full version...but
it is well worth it!

If you don't have access to the web, email me back, and I will
download it and email it to you
as an UUE or MIME file (your choice).

If what you want is something to replace the "Show - Print - Cancel" thing that happens when you double click on a non-executable file, I'd suggest GUCK, which is installed by replacing some lines in your desk information file (DESKINF or NEWDESK.INF), so it doesn't even need to take up an Accessory slot.

Other options are 1STGUIDE or any good text editor like Everest, Edith or QED.

Hi Pascal!

I take it you mean the 'Convert MIME-style' in 'Options/Switches'? Yes,
that's a very good point I had not thought of! I toggle it regularly with
Alt-1 for reading German messages with Umlauts on the one hand and seeing
ASCII sigs on the other, and have no idea how it was set when I decoded. Pity
it doesn't switch it off automatically when using 'Write binary' - HOW ABOUT
IT, SLAB?

Unfortunately though it seems to use the TCP/IP protocol. I'm still
waiting for one compatible with Windows Networking or Novell NetWare!

Yep, I was there alright. Apart from buying some stuff like a nice
blue Atari T-Shirt at the Atari Computing stand and a keyboard for
DM15 (15 min. later the price was already 20DM) I bought me, like Jo
says, a Hades 060. Due some transport damage the Hades refused to
work but this is fixed now (a new motherboard) only it's a pity that
I've for the moment very little time to play with it. :-((

I saw one of the earlier HAWK 030s at the Sacramento show a while back. However, the last I talked to Steve, he said he was out of the picture concerning the developement of the card. The're suppose to be several beta testers in the field, but noone has ever posted a single word on the project that has one installed in a Falcon. I realize that they wanted a clean, no hack product to market. The main issue (the most presistant problem) has been the utilization of a flash rom in lue of patching TOS in RAM. This is their "face saving feature":).
The legal issue of patching TOS is kind of a dead horse. Most Falcon users that upgrade the processor and ram of their machine usually choose to install another O/S anyway. Why would you want to run a single tasking O/S on a Falcon with the increase in performance that a card like the A/B has, or HAWK could provide? TOS 4.92 is not much of an answer here, sad to say, with what other options are available.

I had many reservations about the Afterburner after talking to Steve about the problems encountered with the failed Barracuda project. I must say though, that I have found the Afterburner to be very reliable and as easy to install as the Barracuda or HAWK was (is?) planned to be. What I worry about with the proposed HAWK is the 32 bit ST RAM it is suppose to have. Most incompatibilites I have found is with software that does not support fast ram. This would seem to include the proposed 32 bit ST RAM as well. The 040 is not the cause of the rumored incompatibilites. I also have an 030 card with 32bit fast ram and these softwares exibit the same problem there. If the HAWK's ST RAM is indeed 32bit, then one does not have the option of using those applications that do not properly function from this type of ram.

Which I guess brings me to my point. Even if Darek could get a TOS 4.04 ROM to boot on Gemulator, what would be the point? Last I saw, the software still didn't support all its advertised features running under TOS 2.06, and all that at only TT speeds on a Pentium 9000:(. One would only want to upgrade to the Falcon if they required the special video modes it offers and are supported by applications such as Apex Media and Rainbow Multimedia. Another reason would be for its special audio features. As far as I know, no DSP support is offered for the Gemulator, an i'm sure that 640*400 interlaced 16bit color is not supported either. And while i'm on a roll, if Gemulator can't get it up with TOS 2.06, I would <HATE> to see what ANY version of the Mac O/S would look like:(. Hell, it's slow on a Power Mac.
So I really don't see the marketability of a product that can't utilize any of the Falcons special features, and would have PC users running out to purchase Mac O/S and applications when the exact same apps are available for the PC. Why duplicate? But then again, the PC market is pretty big, and it takes all types.
I think that Wizztronics should have stayed with the Barracuda. The hardware looked first rate. Their problem has been not having someone that can code for the 680X0 CPUs. They could have manufactured the boards and distrubited them from the U.K.
To bad there is only one Doug Little to go around.....

Happy A/B user.

(Oh, yea. One Gemulator for sale. Support not included).

Hi...

While cleaning out a cupboard at home, I came across a pile of my old 'ST Format' magazines! In a fit of 'rose tinted' nostalgia I sat and read through them all!.....

I changed over from my trusty STE to an Apple Macintosh when I went to Art College (in 1994)....But I couldn't help wondering what is happening with the Atari and the ST in particular?

I would be very gratefull is anyone could contact me and tell me just what's gone on since December 1993 (SpeedoGDOS, MultiTos and the Falcon were just coming in) and now.

...Are there any enthusiast groups still around in the UK?

....Does anyone still use or know what happened to DA Vector?

...I am kinda tempted to get hold of my old STE again (I sold it to a friend who still has it) just to rekindle old memories!!!!

I would appreciate any info please....

Many thanks in advance!

Beaty

Exactly, it's very ISP dependent. I'm experimenting with a new (for me) ISP witch have different PoPs. On one of them all is OK, and on the other I can't resolve anything after a succesful connection. Here is the end of the relevant dialer log file if it can help. I've tried both with and without VJ. The only diff is that the log file is shorter with VJ enabled.

There is a program for the STE, called MP_STE, which does what you want.
This is the STE version of M_PLAYER, which is works on the Falcon and TT in
upto 65536 colour. Either of these programs can be got from:

On the WEB
http://perso.wanadoo.fr/gtello ('official' page)
http://www.tripnet.se/~mille
http://www.magmacom.com/~nima
http://www.allatsea.demon.co.uk

FTP site
ftp://193.190.205.13/Archive/atari

BBS
'The BBS' in Paris-France (01 42 51 11 35)

Names are:

MPSTExxx.ZIP (STE, xxx is the version number).
MPLYRxxx.ZIP (TT/Falcon).

As long as you don't use them, I can't see a problem. I've only ever used
the 8.3 format, old habits die hard :-) so I've never had a problem with it.
I'll have a go and see what happens to the disc then let you know.

>alone programme. Any ideas anyone?

If you have ST-Guide installed why not use that? It can be installed
as default viewer for some desktops (Magxdesk in my case), or if
you're using the TOS desktop (with STG as an accessory), you could
install CALL-ACC.GTP as an app for .TXT files. You could install it
for more extensions by editing your desktop.inf (though take care you
know what you're doing and work on a copy: you have been warned!).
Alternative desktops which don't allow a default viewer to be set can
sometimes install apps for multiple extensions anyway.

Using STG will save you having to install an extra program and it
allows you to copy stuff to the clipboard and print, plus search the
text etc.

It depends on the disk, but with newer IDE's it will be faster. The SCSI-bus on the Falcon is limited to 1.8-1.9Mb/s, while IDE can be more than twice as fast.

> Open an IDE partition, download a huge file in it (via ftp), someone

> won't feel that slow down like on ide. EVEN if you have a
> faster(transfer rate) superior to your scsi drive.

This *must* depend on the disks, and not the interface! Fact: MiNT (or TOS and all TOS-clones except MagiC to be precise) can *not* do background disk-transfers even on SCSI! While a sector is being read or written, everything stops regardless of IDE or SCSI.

> 1) IDE for multitasking suck for technical reason.

Normally yes, but with TOS/MiNT it doesn't matter. MagiC can do background DMA-transfers if HD-Driver is installed and all SCSI devices/drivers supports it.

> 2) ide sucks CPU time NOT like scsi drives.

Correct. But as I said, it doesn't matter under MiNT. With IDE, the CPU is used to read or write sectors. With SCSI, it simply sits there and waits. And if the IDE-drive is faster than the SCSI-bus (i.e. faster than 1.8Mb/s), IDE is faster! I have both, so I know: The Quantum Fireball 1280 reads almost 4Mb/s, while a couple of old SCSI Seagates drives the SCSI-bus to the limit and reads 1.8Mb/s.

If you use a OS that supports proper non-blocking disktransfers (like Linux) SCSI is ofcourse better.

> that's what I noticed with my IDE and SCSI drives, (confirmed by
> others)

Well, if you use the original (or a old one) IDE I can understand it, the 240Mb Conner I had couldn't manage more than 600-800Mb/s...

>Jean-Michel MERCIER.

Hi J-M,

I think it depends on how the CACHE.DNS was created. I use the same file
for both STinG/slip and /ppp. If you do connect successfully and do some
surfin' the cache will work properly when you re-boot later. Otherwise,
you may get the error at boot-up, though it doesn't seem to cause problems.
AFM, the "resolve" works quickly, just a few seconds or less.

C'est la Vie,

Charles

just about any driver software for hard drives can be used with an ST, however, HD Driver has additional support for ZIP drives (password protection, among other things).

Now what I'd like to know is - does the new ZIP Plus solve that one problem that the original one had, namely its inability to provide power to a host adaptor like the Link without having to have another SCSI device plugged in ?

FWIW, I also notice that there's the beginnings of another price war between IoMega and Syquest; I saw the EZ Flyer (the 230 mB, EZ-135 compatible removable cartridge drive) going for $249 CDN at a local music store - I'll have to check the computer superstores and see how low they're going :)

How fast is fast? Mac Plus speed? If a PC emulator can run Mac O/S "very fast" then why buy a Mac? I can get Mac Plus CPUs at the thrift store for $5.00. How much did he want for the ROMS?
If infact the Mac emulator is as good as it seems, why would he be the first to market it, and the hundreds of other companies that produce Pentium cards for the Mac not produce something simular for the PC?
With as much trouble as Dave Small had gotten into over Spectre, I wouldn't think Dareks product to be longlived (read lack of support, after his hand is slapped by Apple).

I don't misunderstand the purpose of gemulator. What I was directing my comments to was the failure of Gemulator to perform as advertised.

>he does not aim to have it emulator an St exactly but a faster
>COMPATIBLE computer..

If you want a faster, ST compatible computer, get MagiC. Nuff said.

> Much of the software that doesn't run depend on
>emulating the timing of an St which Darek doesn't plan on emulating,
>the rest is mostly copy protection..

Nothing new here. Those problems exist between the ST and Falcon.

>The falcon can run much st
>software after using various programs which emulator some of the
>resources that are moved and/or set the ste compatibility bus bit in
>the COMBEL which slows down many aspects of the falcon and modifies
>some addressing.

I think everyone that owns a Falcon already knows this. I also pointed out the only reason for someone to upgrade to to a Falcon is for its special features. If they are not to be emulated, why even bother adding a TOS 4.04 ROM?

This is really sounding like a buy-me pitch. Atari users know what they want hardware and software wise.
Trying to make a computer into something it is not usually ends up costing you more money that it would than if you broke down and purchased the tool that you need. Emulators are fine for running generic ST applications, but most people will be disappointed if the manufacture "hints" of Falcon compatibility and spends the cash to find out that it is a bunch of bull.
>
What Falcon users would like to see is a 100% Falcon TOS 4.04/ hardware compatible computer, code compatible with existing software and industry standard hardware compatibility.

Heck, if I want to run Windose, I just do a keyboard toggle to the PC card in my Mac from either the Mac O/S or MagiC Mac.

I see nothing new in what is being offered here.

How fast is fast? Mac Plus speed? If a PC emulator can run Mac O/S "very fast" then why buy a Mac? I can get Mac Plus CPUs at the thrift store for $5.00. How much did he want for the ROMS?
If infact the Mac emulator is as good as it seems, why would he be the first to market it, and the hundreds of other companies that produce Pentium cards for the Mac not produce something simular for the PC?
With as much trouble as Dave Small had gotten into over Spectre, I wouldn't think Dareks product to be longlived (read lack of support, after his hand is slapped by Apple).

I don't misunderstand the purpose of gemulator. What I was directing my comments to was the failure of Gemulator to perform as advertised.

>he does not aim to have it emulator an St exactly but a faster
>COMPATIBLE computer..

If you want a faster, ST compatible computer, get MagiC. Nuff said.

> Much of the software that doesn't run depend on
>emulating the timing of an St which Darek doesn't plan on emulating,
>the rest is mostly copy protection..

Nothing new here. Those problems exist between the ST and Falcon.

>The falcon can run much st
>software after using various programs which emulator some of the
>resources that are moved and/or set the ste compatibility bus bit in
>the COMBEL which slows down many aspects of the falcon and modifies
>some addressing.

I think everyone that owns a Falcon already knows this. I also pointed out the only reason for someone to upgrade to to a Falcon is for its

special features. If they are not to be emulated, why even bother adding a TOS 4.04 ROM?

This is really sounding like a buy-me pitch. Atari users know what they want hardware and software wise.
Trying to make a computer into something it is not usually ends up costing you more money that it would than if you broke down and purchased the tool that you need. Emulators are fine for running generic ST applications, but most people will be disappointed if the manufacture "hints" of Falcon compatibility and spends the cash to find out that it is a bunch of bull.
>
What Falcon users would like to see is a 100% Falcon TOS 4.04/ hardware compatible computer, code compatible with existing software and industry standard hardware compatibility.

I haven't but I can think of no reason why one wouldn't work, SCSI is a

> Also, is special driver software needing for a ZIP drive or can
> it be used like a normal SCSI HD?

You shouldn't need any special software unless you want to
write/password protect your discs.

2512. Death from JAVA

Newsgroup: comp.sys.atari.st
Date: 1997-11-16 00:00:00 UTC
From: james.burr@acpu.com
Message-ID: <879704208@acpu.com>
Source record: 113520

I am posting this important news bulletin as a public service
announcement as I am concerned and can save your lives.
Did you know that the use of JAVA from Sun Microsystems can actually
kill you? Yes according to the Addendum to the Software License
Agreement for Microsoft Windows 95.

I quote exactly the paragraph that explains this.

1. The following additional terms apply to Micosoft Internet Explorer:

* NOTE ON JAVA SUPPORT. THE SOFTWARE MAY CONTAIN SUPPORT FOR
PROGRAMS WRITTEN IN JAVA. JAVA TECHNOLOGY IS NOT FAULT TOLERANT
AND IS NOT DESIGNED, MANUFACTURED, OR INTENDED FOR USE OR RESALE
AS ON-LINE CONTROL EQUIPMENT IN HAZARDOUS ENVIRONMENTS
REQUIRING FAIL-SAFE PERFORMANCE SUCH AS IN THE OPERATION OF
NUCLEAR FACILITIES, AIRCRAFT NAVIGATION OR COMMUNICATION
SYSTEMS, AIR TRAFFIC CONTROL, DIRECT LIFE SUPPORT MACHINES, OR
WEAPONS SYSTEMS, IN WHICH THE FAILURE OF JAVA TECHNOLOGY COULD
LEAD DIRECTLY TO DEATH, PERSONAL INJURY, OR SEVERE PHYSICAL OR
ENVIRONMENTAL DAMAGE.

I don't know about you people but this is a pathetic attempt to debunk
what I think is a new and wonderful language. It also proves that Bill
Gates and Microsoft Corporation feel threatened enough by JAVA and Sun
Microsystems that they have to resort to this tactic on a competitor. I
tell you that what this paragraph above says about JAVA can also be said
about Microsoft's software as well.

The very reason I like JAVA is that it's a language that is machine
independent and has the power to become a standard. To think of
software that can work the same on almost any machine I think is
wonderful. I'm an Atari Falcon user and there's a lot of talk and
laughter towards me and my Atari user friends because we enjoy using
computers that have very little commercial support compared to others
and because Atari is gone and TOS is a dead platform. If we were to get
Sun Microsystems to write JAVA drivers for the Atari ST/TT/Falcon
computers it could lead to a sort of resurrection for our platform and
push our computers back to the mainstream using professional up to date
software that is compatible with JAVA programs on the PC and Apple
Macintosh systems (unless Gate's deal with Apple stopped that). I feel
that it would be a wonderful opportunity for us to support Sun
Microsystems and JAVA so sometime in the future they may support us
Atari people. And there's a lot of us out there.

Just a thought I wanted to throw out there. I don't know if it's just
me but it appears that Bill Gates is trying to control the world?

Trying to bid for MCI Communications as well as TCI CableVision from what I heard. Weird.

Regards,
James

Hi all,

As the title says, I'm looking for a 2nd hand Jag CD unit, if anyone's got one they want shot of.

Obviously, it's gotta be in good working order and cheap !

I'm really looking to pay <=50 quid. So, if anyone's got one - please let me know :)

See ya,

Mark.

I'm trying to with STinG, but the great variety of PPP implementations
amongst ISPs makes it very hard for the single person. It would definitely
help if I had access to more ISPs, but then still occasionly it's very
difficult if their support people do not support at all.

Maybe you should again report your problems in much detail in personal
mail (I know you've done once in the past, but since there have been a few
releases). I suppose you're sure you have the latest versions ?

Fortunately no hardwired stuff was necessary. Winsock negotiated (dunno about
more recent versions) to not use compression but then uses it anyway. ISPs
had to adapt, and thus some folx must not use compression when told by the
ISP to use it and vice versa. Braindead.

> ...
> ppp allways have full speed, day or night time.

If you have such differences in SLIP performance depending on the time of
day, then obviously your setup is alright, and the problem is network load.
However, what makes it really strange is that with PPP you do not suffer
such differences (at least that's what I understand from what you're saying).
That can be explained only by your ISP handling SLIP very much different
from PPP, which appears somewhat insane on the ISP's side. Which ISP do you
use anyway ?

Hi Mario,
Did you tick the "use minimum sector size" box when you partitioned with HDDriver?
If you didn't, and used a larger partition than 256MB, you got a sector size of 16kB.
To get perfect CAF compatibility, you must keep the partition size below 512MB (so that the sector size never gets bigger than 8kB).
You could also have a CPU clock fix that doesn't work perfectly with your Falcon - there are three modifications to find on my homepage, troubleshooting section. You could check out which one has been made and try one of the others, to see if it helps.
I use HDDriver with my 2.1GB drive without any problems, so yours should work too.
Since you've had other problems too, you may have a hardware problem somewhere, but let's hope for either faulty partitioning or clock-fix. Keep in touch about your progress and I'll try my best to help you out.

Best regards,
Claes

No, you're absolutely right. I'm swapping SyQuest media with long (VFAT)
filenames all the time between my Atari running under MagiC 5 and a PC
running under NT.

No, Megafiles use either MFM or RLL drives, depending on the version.
The result is the same though, you need an ACSI/SCSI host adapter.

It will surely work because the standard ZIP drives (SCSI only) also
worked.

> Also, is special driver software needing for a ZIP drive or can
> it be used like a normal SCSI HD?

Most drivers will do. If you want to make use of the unique read/write
protection features of ZIP/JAZ drives you should have a look at
HDDRIVER. HDDRIVER comes with special support for ZIP/JAZ:

I've never used SOUP but when I use Okami in UUCP mode I don't have to
enter any parameters for oimport or oexport. I think they both read the
o.inf file to find out the mode. I could be wrong though.

I'm having major ISP problems right now. When it's all settled I'll get
Okami going.

we're not dead. We're not even "pining for the fjords" :)

BTW, I've forwarded the original "warning post" (read - "possible
troll") to alt.folklore.urban - this looks like it could be a story
that grows legs and gets posted all over USENET, and the denizens of
a.f.u are always up to debunking and confirming these things.

2533. For Sale - Atari 1040 STE and Development Kit

Newsgroup: comp.sys.atari.st
Date: 1997-11-17 00:00:00 UTC
From: glens@natinst.com
Message-ID: <64pqia$sct@falcon.natinst.com>
Source record: 113400
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other.systems,misc.forsale.computers.other.misc,austin.forsale,houston.forsale,dfw.forsale,tx.forsale

I have the following items for sale:

Atari 1040 STE computer with 4 Megs of RAM installed - excellent condition

includes original packaging and all accessories
(mouse, power cord, RF switch, RCA cable, and language disk)

mouse pad

2 joysticks

monitor converter box for 15 pin VGA connector with switch for color
or monochrome mode (note: you must use a VGA monitor that can handle
a 15 KHz scan rate - or you can use a regular TV instead of a monitor)

40 Meg Quantum SCSI hard drive (note: I don't have a SCSI adapter for
the Atari 1040 STE - this is necessary to use the hard drive with the
computer)

utility software:
Advanced OCP Art Studio
Stalker/Steno (terminal software for use with a modem and text editor)

games:
Pipe Dream
Oh No More Lemmings
Vegas Gambler
Joust
Zany Golf
Viz the game
Panza Kick Boxing
Ghouls n Ghosts
Rampage

also - 1 case full of Euro Demos (37 disks worth)

I am asking $75 plus $15 shipping (continental US, more for shipping
otherwise) for all of the above.

I also have an official Atari ST-TT Developer's Kit (from Atari) for sale.
It includes 3 large notebooks of documentation, 5 disks which include
a C compiler, an Assembler, and development utilities. I am asking $30
plus $9 shipping (continental US yada yada) for this.

Please contact me at glen.sescila@natinst.com.

Thank you.

Yes, by "sockets" I mean the BSD-kind. This is also the most common definition
of sockets among the programmers I know.

If you by "sockets" means any kind of API where you connect to a network of
some kind, the term becomes a bit useless IMO.

> Your statement shows a degree of BSD affection, which is not bad, but also
> implies the kind of narrow-mindedness that is demonstrated by saying "Of
> course a computer runs DOS and/or Windows, what else should it".

Not at all, I'm perfectly aware of the fact that there are many different
APIs. But calling all network-APIs for "sockets" is a bit like calling
all window-based GUIs for "Windows" IMO.

> > but a strange (and compared to sockets, perverted ;-) API that doesn't

> Have you written a program that uses the STiK API ? I suppose not. Yet you

I did start on a nntp-module for CAB last year, but gave it up due to lack
of inspiration and difficulties with the CAB<->OVL interaction. I did manage
to fetch a list of newsgroups from the server though.

> appear to be the expert who can call this a perverted API ? Soon it will

Did you notice the " ;-) "? Btw. this is getting out of proportions here,
I originally called the STiK/STinG API "slightly braindead" (IIRC) in a
discussion between me and Magnus Kollberg re. writing and maintaining clients
for both STiK/STinG and MiNTnet, where my point was that the two APIs are very
different, and that these differences makes it hard to port stuff or write
clients that works with both APIs.

> provide all the BSD-socket functionality, then it won't be inferior anymore,
> but offer the advantage of a very file-like, intuitive way of programming

"Soon" perhaps, but it's definelately not very "BSD" right now.

> network applications. It's this easy way of getting started that has prompted
> people to write so many brand new applications for the API in such a short
> time. Take away the one-to-one ports of BSD applications, and there won't be
> so many more network applications for MiNTnet than for STiK/STinG

I don't think this is mostly because of the API itself, but because STinG and STiK works on almost all computers and doesn't require a master degree in hacking to set up (which I have to admit a complete MiNT and MiNTnet setup does...).

> Bottom line is, BSD sockets certainly are a very good way of getting appli-
> cations plugged into networks, but that certainly does not mean, it would be
> the only good way.

Ofcourse not :-)

> > MiNTnet and PPP-Connect both use sockets (so does TermiteTCP, but will it

> So you've programmed PPP-Connect clients ? Or how can you tell it provides
> a BSD-like interface ? I've heard this statement from people who either take

No, I haven't programmed for PPP-Connect, and no, I'm not 100% sure that it has BSD-sockets. But if PPP-Connect really is a later version of Blip, and the API is pretty much the same (as I've heard from different sources, but can't confirm because ASH haven't released the specs) I have to say that it looks very much like BSD.

And TermiteTCP has been marketed as having "BSD-sockets". The Amiga-version certainly does.

> With proper bindings, even the STiK/STinG API can be made rather BSD like.
> Why don't you want that ?

Hey, I proposed something like that over a year ago on the STiK-list! The response I got was mostly "no can do", IIRC because of limitations in STiK and the current API. But I understand that the API has been extended since that, and if it's possible to write such bindings today I will *love* to see them.

Slight oops above. Megafiles predated ide I believe. You will probably
find an MFM drive inside, not ide, not scsi. You could buy a used MFM
drive from a swap shop and get by for a while longer. If you do want
to convert it to scsi, then the response above is right and you need
to get a scsi to acsi host adaptor. (or are you going into scsi
directly on your falcon/tt?) Wayne Booth

2539. Re: Help with SPECTRE MAC emulator

Newsgroup: comp.sys.atari.st
Date: 1997-11-17 00:00:00 UTC

Message-ID: <199711171239.a48016@h.maus.de>
Source record: 113406

Hi Jarda, Hi Maik
welcome to the club. :)
I`m searching for the 3.1 version since I bought a GCR about 2 years ago
and didn`t find one ...:(
The last version available seems to be 3.0 though 3.1 should have been the
one that does it all (true SCSI for example)
Here is some of my dissapointing experience:

>ST-RAM >4MB on TT = problems starting
>no FastRam access :(
>SYSTEM >6.xx : failed:(
>HFS-partitions via ACSI= problems copying anything to it
>CD-ROM access (even on classic CDAR504) : failed
>HD 1.44MD disk drive = failed (even using DD disks!)
>grafikcard = failed

so it seems to be not much more than funny toy if you`re looking for a
tool to change data with MACs or even run MAC-soft....
CU Frank

The Megafile has a single board ACSI/SCSI host adapter along with
an Adaptec 4070 SCSI/RLL controller. You need an RLL drive not IDE.

You will need to obtain a SCSI host adaptor. The megafile most likely
uses an IDE type drive and a SCSI to IDE adaptor. There is room inside
a megafile box for an Atari SCSI to SCSI adaptor and an SCSI drive.

2550. SCSI in Megafile??

Newsgroup: comp.sys.atari.st

Hi all,

Can I put a new SCSI drive in my megafile? Do I need to do any mods
to the interface?? Replies in plain english are a help.

Thanks!

Willard VanderPloeg

As much as I don't like MicroSoft, the above statement about Java is completely accurate. Even Sun informs people that Java is NOT suitable for hard realtime systems. This is a typical CYA from MicroSoft, and is completely useless. No reputable company writing hard realtime software would even consider Java. I wouldn't even use it in a soft realtime system. Not if I wanted to keep my customers happy.

Yes, you can. The drive type has nothing to do with your filesystem. As
long as your hard disk driver supports your hard disk you can create any
fileystem you want on your drive.

You're using a SCSI drive. Remember that background DMA is not possible
with IDE drives because DMA is only supported for SCSI/ACSI on the
Atari.

All hard disks etc. support this anyway. It's not a matter of the
devices but only depends on the driver and the operating system.

> If you use a OS that supports proper non-blocking disktransfers (like Linux)

MagiC is also proper in this respect.

You can use any IDE/EIDE drive you like. There is no limitation on the
type or capacity of your drive. Note, however, that some hard disk
drivers (especially old ones) might have problems with large IDE/EIDE
drives.

Hello.

I found a couple of usefull JPEGs to put in a report, but CAB
seems to be all that can read them ! Imagecopy, GemView, JPEG5
and SPOL all whinge about an unusual code. CAB seems happy enough,
though.

Any Ideas ?

2557. FS/T: Atari ST software [11/18/97] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1997-11-18 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <347355eb.824589@nntp.ix.netcom.com>
Source record: 113415

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 11/17/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

ATARI ST COMPUTER:

$ 4.00 Techno Cop (U.S. Gold / Epyx)
$ 5.00 Warship (Strategic Simulations, Inc.)
$ 4.00 Winter Games (Epyx)
$ 4.00 World Games (Epyx)
$ 4.00 World Karate Championship (Epyx)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

After buying quite a few computers i've accumulated duplicates of

these items so their up for sale. I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Golden Image Hand Scanner & Touch Up Software ..... $ 50
* Spectre GCR Mac Emulator ..... $ 35
* Mega ST 2 ..... $275
* Mega ST 4 ..... $375
* Atari 1040STf (1 Meg) ..... $ 65
* Color Monitor (Atari) .....$ 40
* Black & White Monitor ..... $ 25
* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* Monitor Switch Box ..... $ 5
* External Disk Drive ..... $ 25
* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10
* Black and White Monitor ..... $ 35

Software: All With Manuals

* Phasar Professional Home Accounting System ..... $ 10

* Dr T Copyist Music Scoring Program ..... $ 5

* Hybrid Arts EZ Score Plus ..... $ 5

* Edit Plus Professional Editing Tool ..... $ 10

* Easy Draw ..... $ 10
* Degas Elite ..... $ 10
* Typesetter St ..... $ 10

* Stalker/Telecommunication Software ..... $ 20

* Steno/Text Editor ..... $ 10

* G+Plus ..... $ 10

* Migraph OCR/Optical Character Recognition Software ..... $ 10

* Mr Boston Official Bartender's Guide ..... $ 2

* The Juggler ..... $ 5

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10

* Elite/A Fantastic Voyage ..... $ 10

* Carrier Command/ Tactical Warfare ..... $ 10

* Defender Of The Crown/Knight Fight ..... $ 10

* Knightmare/Knight Fight ..... $ 10

* ShadowLands/Barbarian Fighting ..... $ 10

* Barbarian/Fighting ..... $ 10

* Lemmings/Maze and Building ..... $ 10

* Ultra V Warrior of Destiny/Knights ..... $ 10

* Baby Jo/Baby Super Hero ..... $ 10

* Drakkhen/Dragons ..... $ 10

* Gun Ship/Helicopter Fighter ..... $ 10

* The Pawn/Good and Evil Fight ..... $ 10

* Dragon Of Flame ..... $ 10

* Curse Of The Azure Bonds ..... $ 10

* Breach ..... $ 10

* Inside Brataccas ..... $ 10

* Star Fleet ..... $ 10

* Time Bandit ..... $ 10

* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5

* Rambo 3 ..... $ 5

* Lure Of The Temptess ..... $ 5

* Civilization/ 4 Disk ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25

* Atari ST Internals/The Authoritative Insider guide ..... $ 10

* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10

* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10

* Atari ST Application Programming ..... $ 10

* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3

If there's something you're looking for and it's not on the list

let me know... I have 2 closets I haven't gotten to yet plus over

my mother's house I have stuff. Willing to work on package
prices. Buyer(s) pays postage!! All reasonable offers will be
considered!!!

e-mail: smooth1@panix.com

>Just thought people here might be interested : WenSuite 2.30a (still in
>french) is available at http://wwwusers.imaginet.fr/~oxo/

Hi Nick and all Kemosabies,

Well, this puppy does work faster than the previous versions. First, I would like to thank John Godbey for translating a few of the docs for me on v2.25. It helped! As John is pursuing other interesting subjects, I was hoping some of the French posters to this NG or those interested in WS might consider translating the docs of this new version ;) Why? WENSuite does connect to some USA servers using ppp. Secondly, I have mail retrieval working well, but I can't get QED, as a text editor working, so I can't edit messages ;) Also, WS does connect to my news server and retrieve messages. So, I have a few questions:

1) To set up a text editor (ex. QED), what does the box "ligne de commande" need to have? (%s= blah blah blah). Evidently, you need a command to call up the text editor.

2) Is registration needed? I don't see any dialog box.

3) WS does connect to many URL's (ex. www.yahoo.com), but not all.
Is OXO aware of virtual servers? www.mycompany.com types are a problem.

4) WS has an excellent "trace" function for PPPLink. However, I can't see any difference between a successful link and a problem one other than PPPLink fails to get my dynamic IP on one server, yet succeeds well with my other ISP. This may be due to VJC. One ISP uses it (fails) and the other doesn't (succeeds). Yes, I did set the proper VJC box.
Does WS support VJC? It would save me a lot of testing to know.

5) What's the "Visualis" parameters needed for the Option-Communication.
This goes with what "modules" work with WS???

Well, that's for starters. Someone from France did post a modest message to this NG using WS. So would I ;)

Regards,

Charles

Does this mean that STiNG will get some sort of BSD-sockets? Cool!

First, are there any problems using GFA basic with Magic or Geneva? If so,
what and can they be easily solved?

Second, what are the advantages/disadvantages of using Magic and Geneva?

Third, is Geneva still available and, if it is, where from?

Regards,
David E-Mail :- dbolt@my-ste.demon.co.uk

Okey. It's just that Steve told me that this is not something that I
should
talk about, but I guess he was joking as everyone already knows about
it.

So he has got the customn chips as well? I did also just hear and read,
that
Activision has just bought Atari Corp. So what will happens to
Wizztronics
attempt to buy TOS now?

Yes, there are problems with GFA-Basic under MagiC or Geneva, but they can be solved. Search for Vegard Hofs&#65533;y&#65533;s homepage (author of Face Value), he has some patches.

```
> Second, what are the advantages/disadvantages of using Magic and Geneva?
```

The obvious disadvantage is that it uses some memory. Geneva use a bit less than MagiC, but unless you have TOS 2.06 I&#65533;d recommend MagiC over Geneva.

If you have 2.06 then it&#65533;s really just a matter of taste. Geneva is more compatible if you use midi-programs or older apps, but MagiC is slightly faster.

```
> Third, is Geneva still available and, if it is, where from?

In UK Geneva is available from Titan Designs.

Hi!

I want to sell my Falcon with following components:

Hardware:
Falcon-TOS 4.04
32 MHz Skunk CPU-accelerator
4 MB RAM
548 MB SCSI-Harddisk (external; no internal HDD)
FPU 68882 Coprocessor (20 MHz)
BlowUP Video Extension (Hard 1) for High-Res.

Optimally used for MIDI and Audio applications.
The machine is upgradeable to the C-LAB Falcon MK-II !

Software:
MagiC 5 and 5.04 OS
(-: MultiTOS OS :-)
Speedo GDOS 5
Ease 5 Desktop
Graoumf Tracker (32 Tracks)
lots of German Shareware (CAB 1.5, 7UP, ...) and tools for MagiC
some more Apps and about 300 MB of Free- and Shareware and PD

...and the price? You can have it all for DEM 800,- plus transport costs. So
you best live in Germany or anywhere nearby :-) If you re interested write
an e-mail.

Dave Gostl <dbg01@gnofn.org> writes:
> If 1stGuide can show them, they are probably "progressive" JPEG's.
> Whatever that means.
It means that the pictures are displayed in "hops". First, you get a
very rough overwiew of the picture, which improves in steps until you can
see the full quality picture. It's a bit like interlaced GIFs and is
useful for WWW-pages as the user gets an impression of the image even
when only small parts have been loaded yet.

Ciao

Source record: 113437

Fellow Atarians everywhere...

I recently added an external 540Mb SCSI drive to my Falcon to go with the 720Mb IDE internal drive. The SCSI drive was previously connected to my aged STfm and so was already formatted/partitioned and nearly full of data. My problem is that I need the Falcon (without re-formatting/partitioning and risking data loss) to recognise partitions upto `s' but it refuses to concede the existence of the alphabet past `p'. Is it a limitation of AHDI? (possible?) or am I missing something glaringly obvious?(probable!).Does the answer lie in HDDriver per chance.

Any help would be much appreciated. BTW does the `U' in "U Drive" stand for "Useless".

2582. (Falcon) CAF problem solved...

Newsgroup: comp.sys.atari.st
Date: 1997-11-18 00:00:00 UTC
From: Mark Fassett <mark_fassett@intuit.com>
Message-ID: <3471EF9F.A0316CDB@intuit.com>
Source record: 113440

Thanks everyone who helped solve the problem I recently had working with audio in CAF (especially Mario).

The problem turned out to be a simple one.. in HDDRIVER, there is a setting where you can select the minimum sector size (under removeable drive, at least under HDDRIVER 5.10). I had changed this to 32k, which prevented CAF from being able to access the drives at all.

Thanks to Mario Becroft for finding this (he had the exact same problem and located the solution).

I am once again happy to be making music on my Falcon.. especially with ADAT interface, Korg digital mixer, and ADAT, all synced together and working like a charm.

Now, about that Nemesis accelerator.. who has it working with CAF?

2588. Sting/Cab with PPP only ISP

Newsgroup: comp.sys.atari.st
Date: 1997-11-18 00:00:00 UTC
From: phantomm@eastky.net
Message-ID: <879867252_OASIS_@eastky.net>
Source record: 113446

Greetings Atari users,

I've been trying to get STING v1.08 and CAB v1.5 to work correctly on
a PPP only ISP here in the US. To the best of my knowledge I have
STING v1.08 set up correctly. I can dial and connect to the ISP. I seem
to get a IP address and receive a message that Link is established and
Success. I receive no error messages at any time. However I cannot PING
anywhere other than the number thats listed in the STING docs.
My ISP doesn't hangup the STING dialer connection after a few minutes, like
it does when I connect with a term program such as Stalker for example.
So I do believe I am getting sometype of a PPP connection.
I am using a 14meg Falcon030 TOS 4.04.

Has anyone had a similar problem and found a solution?
Any help is appreciated.

Source record: 113449

I have an HP 600 and print to it no problem using the HP500 driver. NVDI 3 and also have no problem with calamus or pagestream for that matter. I had to write my own driver for DBman if I wanted to use any kind of fancy formating. Otherwise I find it to be very fast and efficient. THe flashing light problem seems to be more of a memory overflow error, due to the printers ram being filled up and expecting the sending software to be aware of the problem.

You most probably run the serial drivers in the AUTO folder *after* STinG.
Watch the bootup procedure closely. Do you see the STinG screen output or
the HSMODEM output first ?

> and if it's possible to write such bindings today I will *love* to see them.

In fact I started on such a lib, and it does not seem like taking ages. However,
I only have moderate experience with that API, so for many details I have to
rely on unclear documentation in the Linux man pages. I just finished digging
through the gcc include files for the numeric values of the various error codes,
surprisingly I could not find any. :-(

Still, a few more extensions have to be made to the STiK client API. As I do not
intend to do those without discussing each one on the STiK developers list, the
full version of that library will need some more time.

Cheers Peter

>Yes, there are problems with GFA-Basic under MagiC or Geneva, but they can
>be solved. Search for Vegard Hofs�y�s homepage (author of Face Value), he
>has some patches.
You can get most patch programs from Columbus Soft, Germany
mailto:christof_schardt@of2.maus.de

If using MagiC I�d advise you to use Ergo!-pro. That�s an IDE for GFA-Basic and Face Value, also available from Columbus.

There is an FAQ about such questions (only in German). I could post it here if you whish.

To all Face Value/GFA-programmers: have a look at my website, there are some links to Face Value-related sites (files -> Face Value FAQ/Face Value UTIL)

I have a mega-ste4 with a 50meg hard disk
you can have it with either a mono or colour monitor

i'll also throw in some misc ST stuff when you buy it

i will trade it for hot wheels, matchbox, or star wars stuff (look in your dusty closets)
or will sell it. make an offer.

if you purchase rather than trade, you also pay for UPS ground shipping (fairly cheap)

i know I would trade the system for a Toys R Us Star Wars 12" Han Solo/Taun Taun

Hello,

While asking about ways to improve my Falcon's keyboard someone suggested TT-Keys (I'm sorry I've forgotten who you are and the message has expired on our system). System Solutions sell a product called KeyClicks, which they tell me is the same product. Both products are a set of plastic cups which you insert beneath the keys to give a more responsive feel to the keyboard.

Before I shell out the 24ukp System Solutions want for it, I'd like to know whether anyone else has bought it and want they think of it.

Many Thanks,

Michael

They could be progressive JPEGs. Try loading them with 1STGUIDE and see if it fills it's mouse pointer several times. It normally fills it once, one segment at a time, before displaying the picture whereas it repeats this operation several times before showing it on screen.

There is a program that will convert a baseline (normal) JPEG to the progressive format, and possibly back, included in the JPEG v6 archive. The only problem is, I've only been able to find the source code archive and I can't compile it. I'm waiting for some kind soul to do it, since I don't have a C compiler that can compile it.

Magnus Kollberg <magnus.kollberg**@**emw.ericsson.se> writes:
> [Progressive JPEGs]
> Any plans for CAB to support them?
Ask Alexander, or the author of the JPEG-ovl. But AFAIK CAB does not
support displaying of pictures while they're being loaded, anyway.

> Also ,will CAB (or maybe it already does?) support SSL, RSA and Cookies?
RSA? SSL uses RSA, but a browser does not need RSA alone. Also, all this
has to be done by the online-ovl, as far as I've understood the concept of
CAB. Just as it is with authentication.

Ciao

Thomas

Well, I've never used the KeyClicks, but I'm the guy that suggested TT
touch and I still stand behind it, for what help that is. The product
described above does sound the same, but it all boils down to the feel the
new cups produces. When I bought mine the store said they'd take it back
if I didn't like the feel. It is non-electronic so hard to break,e asy
enough for them to take back.

Hi,

It's not only Magic that causes problems. With N.AES I do have the
same problem. Only the close box works.
Under Geneva however everything works.

You mean the 'jpegtran' utility.

> have a C compiler that can compile it.

Be patient!
IJG v6b will hopefully soon be out, and as a new member of IJG I've also
taken over the Atari port.
It is currently in final Beta stadium (available in source form from the
private IJG archive at columbia.edu if somebody cares), and I will provide
the Atari binary package as soon as Tom Lane makes the public release.

Like the current version 6a, it compiles straight with Pure-C on Atari systems.

v6b will provide some enhancements, particularly in 'jpegtran' :-).
You may look at http://www.reporter.de/jpeg-lab.html to get an idea.
You can also use this page to convert progressive JPEGs to baseline
losslessly (works fine at least with Netscape)!

Hold an eye on the JPEG-FAQ (http://www.faqs.org/faqs/jpeg-faq/),
particularly part 2 section 10, for upcoming download places...

Regards,
Guido

Hi!

For the '060 you need a specially patched MiNT-version.
But SH didn't work on my Hades040, too !
So I work with TCSH now ;-)
MiNT-Net works fine on my Hades040

Wensuite doesn't seem to work with Magic 5.13.
I can start the program,but the windows doesn't react to
the mouse.It's just the closerbutton that works.
With TOS there is no problem.
Any suggestions why ?
My system is Falcon 030/Magic 5.13

See my corresponding post in another thread.
You can use 'jpegtran' from v6(a/b) IJG distributions to convert
progressive JPEG losslessly to baseline JPEG or other file formats.

Regards,
Guido

Cool.

Next question: How is compatibility with GEM apps? Specifically, I want to
run CAB 1.5 or the demo of 2.0 at 800x600 in 256 colors.

Currently, using the TOS ET4000 drivers the browser chokes. Is there any
reason to believe that the ET4000 version of NVDI might address this?

Thanks again for the response.

Although I havn't tried using it yet, if you look in http://www.hollis.co.uk
you can download
the Trackman sequencer which used to sell
for £199 for free.

As for the questions about Mice Maplin in the UK
still sell an Atari compatible mouse. However it is
a bit expensive.

They are on the net if you look, and accept international orders.

2622. Gemulator - disk write problem

Newsgroup: comp.sys.atari.st
Date: 1997-11-19 00:00:00 UTC
From: Alyre Chiasson <alyre.chiasson@fundp.ac.be>
Message-ID: <64vjje$eeo@hermes.fundp.ac.be>
Source record: 113354

I am using Gemulator 96, the Windows 95 version. I get an error message, "cannot create file" when I try to unzip a file using stzip.prg or when I try to run a self-extracting TOS file (with Neodesk installed). Without Neodesk the system doesn't even run the TOS file and gives me the "show print cancel" dialog box. If I click on a simple text file I get the message "cannot change to path TOS 34 error" (without Neodesk). Is there a problem with my configuration? The zip problem can be resolved by running Unzip under Windows but not the self-extracting file. I have no problem writing output from TWRITE, Calligrapher, Calamus, just to name a few.

I do not have Atari disk mode turned on because I don't understand what it does even after reading the short description in the manual. It enables partitions but from what? It sounded like it would take my C drive and possible mess up my files trying to create partitions. Creating partitions under TOS erases all files so I wasn't up to exploring. Apart from the above problem I would really like to know what this option does? Is it the source of my problems? Will it mess up my Windows files? I have long file names.

Thanks

Alyre Chiasson

: >
: >What is NVDI?

: NVDI has built-in screen drivers for the ET4000. I believe it's a
: specific version (not sure, though).

The drivers aren't really "built-in"...they're on-disk, just like, say,
printer drivers. Make sure you get the ET4000 version, since the ordinary
version doesn't come with drivers for graphics cards. Note also that the
ET4000 version also accelerates ordinary ST/TT video modes in addition to
modes available from the graphics card.

Break it down for us. Which device is the master? SMPTE, yes, but I assume it's on a VHS tape, right? What device are you using to translate SMPTE LTC to MTC? How do you have the Synchronization dialog box set up?

Part of the problem might be trying to send MTC and MIDI note events on the same MIDI port.. a multiport interface would help, but it still should work with the setup you have.

It depends on how good you are with a soldering iron.

You could probably adapt a printer type switch box to
switch the appropriate lines.

Anyone interested in making monitor boxes (I made one
to allow a Multisync monitor to work in both Low and Hi Res
may be interested to know that Maplin in the UK sell the
13 way D type plugs and sockets that the Atari uses. >Hi,

What you describe there is actually pretty hard to achieve by a normal
application, even (or particularly) by a rather buggy one. So I reckon
you fell victim to some unfortunate circumstances, maybe some sort of
interference on the harddisk cable. I really doubt that NewsWatch should
be the culprit.

2649. old modem to phone line advice needed please

Newsgroup: comp.sys.atari.st
Date: 1997-11-19 00:00:00 UTC
From: "Anthony p. Lilley" <anthony.lilley@usa.net>
Message-ID: <655a5m$80q$1@newsserver.dircon.co.uk>
Source record: 113381
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.tech.atari

Please help I have a problem connecting this old BT modem to the phone line for my father. It must be possible... If i am testing it what is a good package to use to see if the modem is working? A terminal program?

DATEL Modem 4192 AX
(19200bps)

Only have serial cable - no others. How to connect to phone line? No dialling tone but lights on modem. On BT line only 3 wires are connected to plug. Line connector cable would be BT plug at both ends (unlike regular modems BT plug and RJ11 plug).

Large A4 size slab shaped 'switchboard' modem,

Front of box lights: buttons:
RTS RFS CD RD DSR TEST AL ST RDL DL 2400 4800 9600 19200

Back of case sockets:
DTE(serial) TELE* PSTN* PC* POWER(240V)
* BT type sockets with 6 connectors

"DEA 2000021 Ground Floor" printed underneath with BRITISH TELECOM embossed on base as well.

Any ideas?
Anthony

oops! You meant to say directory structure!

>Change (edit) the first two characters of
>the hex to E5. You could change everything to 00 00 00 etc, but E5 will
>delete the file/folder.

Hehe! A subtle problem ...

Changing the first char to $E5 does indeed mark the file as deleted
but by its very nature gives the filing system free licence to use the
directory entry again, and when it does, we lose the information
stored for the faulty file, most important of which is the FAT chain.
The loss might not be important (and recoverable as floating clusters)
but then again it might. Some or all of the chain might be bogus,
valid or crosslinked but we'll never know because we let the system
overwrite the directory entry where the only reference to the chain is
stored. ;-)

>This is not for the timid!!! I STRONGLY suggest that

Good advice although if someone wants to really experiment in depth
then they should ensure the ramdisk uses the same fat scheme,
typically 16 bit because deciphering 12 bit intel format info as used
on floppies can make yer brain go soggy!

THE ATARI ST QUICK FAQ
v2.1 - 1997/10/17

In order to save bandwidth and avoid comp.sys.atari.st newcomers
asking the same questions over and over again, here is a quick list
of the most Frequently Asked Questions (FAQ) and, hopefully, useful
answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA-HTML)
http://wwwperso.hol.fr/~nbales/quickfaq.htm (Europe-HTML)
or
ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway-ASCII)

If you don't have web or ftp access, send me an e-mail at the
following address, and I will be happy to send the FAQ directly to
you:

bales@hol.fr

This announcement is manually posted once every week.

Nick

> totally at a loss here.
>
> What is NVDI?
>
> Thanks!

NVDI started out as a utility which replaced the part of GEM
which deals with screen redraws etc (the VDI) with highly
optimised code, resulting in much faster screen redraws and
general improves the speed of the display.

The newer versions of NVDI now also include it's own, improved
vector font system, similar to SpeedoGDOS, which allows you to
use Speedo and True Type fonts.

NVDI ET4000 TC provides drivers for use on Atari systems fitted
with an ET4000 graphics card.

Hope this hepls.

Regards,

Ben Hills.

I have managed to install MiNT/MiNTNet on my Hades, but only for
internal TCP/IP connections. What version of MiNT/MiNTNet are
you running. I know when I downloaded the latest version of
MiNTNet from the Authors home page it caused problems on my Hades
and I had to resort to an older version.

Also, what does the sh shell script contain?

Yes, you can use HDDRIVER and additionally either Big-DOS or MagiC 5.
With MagiC 5 partitions up to Z: are possible, with Big-DOS partitions
up to Z: and additionally 1: to 6: (so all 32 BIOS drives are used) can
be used. 1: to 6: of course won't work with all file selectors etc.

As long as you get BSD socket compatibility into STiNG I don't care. I
think
it's a good idea to stay to the "standards" as long as possible insteed
of
come up with a atari specific standard. It will only complicate things
in the
future.

> Both are difficult to do right now because of the lacking features I mentioned
> above, for which it is not decided yet how they will become implemented.

As you program STiNG, can't you do it as you want? STiK hasn't got it so
it
doesn't realy matter how it's done as STiK hasn't got it anyway.

> You should note another thing. People use STiK / STinG because they decided

Maybe a stupied question, but how hard would it be to make SPIN, or
another version based on SPIN, to read Mac HDs and disks as well?
Doesn't
the Mac use the HFS filesystem there as well? Or maybe it already does
that?

Not that I'm that interrested in the HFS filesystem but more in MiniX
for
MagiC, but it would be cool to just be able to plug in a Mac disk or
attach a Mac HD.

Has anyone started on a Minix port for MagiC or is it impossible to do?

does thee mean root directory?

>this is how I noticed it as it was the first file there.

If it's in the root directory then this is handled differently. The information for where the root directory is stored originates from the boot sector. Of importance here, is the fact there's only one garbled entry so errors in the partition's boot sector can be dismissed (multiples of 16 garbled names would be worrying for a "normal" hd).

You can only be sure it's the first file there by turning off "sort by name" etc options on the desktop if possible (otherwise with a utility such as Knife-St).

The only possible instance I can think of here where the file might in fact be valid, is was if it was never intended to be seen (hidden or system file) but I don't even believe that statement myself!

Some background info. Subdirectories (ie folders) are in reality files which are handled in a special way by the filing system. This is why there is no real limit on the number of names you can have in a folder - when a "folder file" runs out of space the system just makes it bigger like any other file and carries on adding names.

Like I said above though, the root directory is a special case. It can only have so many names in it and that's yer lot. The system does not treat the root directory like a file internally and that eliminates an awful lot of potential causes. The only reasonable conclusion can be that the name in the entry *is* corrupted leaving only one more problem. Is the rest of the info in the entry corrupt?

>> >on my HD which I can't seem to
>> >remove, it appears to be a corrupt part of the disk and I am just

>There is no faulty data that I know of as such, but it could easily be some
>file I haven't used for a long time.

Having somewhat chastized Charles [sorry!] for mentioning the $E5
hack, the problem here sounds like something where it would be
applicable - except - you need to be able to work out which sector the
bogus entry is in then figure out which byte of that sector needs
changing to $E5. This is aside from resolving floating clusters
beforehand, checking the bogus entry's fat chain and resolving
floating clusters afterward.

>> >I think I'll stock up on the disk management stuff now.
>> Try Knife-ST for starters. If, as I suspect, you have a logical fault,
>> it will almost certainly tell you about it. It was given away on
>> (iirc) an ST-Format cover disk ages ago.
>
>Yep, I got that.

Rather than fix errors properly all I have tended to do when
confronted with bogus file entries (folders usually need immediate
attention) is rename them to BADCLUST.xxx and make them read-only
(with Knife-ST if tos won't play ball). Only when they start to
accumulate do I bother doing anything about them.

It took me about four days to convert the MiNT CDROM-XFS into a MagiC XFS.
If you have so much time, just do it.
But: The source code for the CDROM-XFS was very well organized and
documented. All low level functions were separated from the high level
ones, and the CDROM-XFS does not do any create(),write(),delete() etc.

Yo Nick,

That's the 64 thousand dollar question! WS connects fine for me with NO
bombs :) However, I can't get the text editor to work at all ;(
I'm using QED which is recommended. Just a few questions on setup:

In the Options-Fichiers "General" I have this entered:

Editor de tests (F=\QED\QED.APP)
Ligne de commande (%s=???) I think this is my problem, how do you call
the test editor to edit files? I've tried several setting to no avail ;(

I can retrieve mail OK, but I can't edit it or send new mail. It would be
excellent if someone with your command of the English language as well as
French <g>, could give me a few hints...

If not you, WHO...

Charles

P.S. YouWho? or is that YaHoo <g>...

: For the '060 you need a specially patched MiNT-version.
: But SH didn't work on my Hades040, too !
: So I work with TCSH now ;-)
: MiNT-Net works fine on my Hades040

Unfortuneately the 060-patch is binary only. But there is a nice little trick
to run self-compiled kernels without this patch:
Just run cpu68010.prg (which sets a 68010-cpu in the cookie-jar) directly before
mint, then execute cpu68060.prg (what will this do ;-)). from mint.cnf.
The problem is just some initialisation-trouble with the caches as I know.
When mint thinks that there is a 68010-cpu it simply doesn't check for this
cache-thing.
sh is running when you don't use the hades.acc. Fredi wrote a small program
for me wich simply turns on the caches, but leaves alone all the system-vectors
hades.acc manipulates for it's turning-off-possibilitys for specific programs.
also you can simply link bash to sh, which I did and this works perfectly all
right for me. Even with some sophisitcated configuration-scripts.
It seems that I'm the only one which runs a full (KGMD)-Mint-Installation with
no problems at all?

Anyone use Guck or Dom's Viewer? After using either viewer, any other program is pretty well gucked, because it can't find its cfg file, or it looks for its cfg file in the path the the viewer just used.

Anyone had this problem on a Falcon 4.04?

Ah, that's sad. Maybe in version 3 then.

> > Also ,will CAB (or maybe it already does?) support SSL, RSA and Cookies?

So does WenSuit support SSL servers then? They does say on the info page
of WenSuite that they have used code from RSA. I thought it had to do
with
the layer, but I read about IBrowse on the Amiga and that it supported
SSL.
I got the impression that the browser must support it as well.

Just to bad that it seems so hard to get hold of the guy who makes the
OVL for CAB.

Hi,
Can anyone tell me if I can get programs with the file extension .APP to run automatically when Magic 4 boots up. I've tried putting such programs (e.g. appline.app or duetmc.app) in the "APPS" and "AUTO" folders on my C: drive but Magic boots as normal and nothing runs. Any help would be greatly apreciated.

Bod.

Eric Hays has it for ftp on 128.120.234.42/atari/Web_Browsers/WENSuite

It is currently at v2.30 and comes as a TOS file.

>What is the minimum computer / software required to run it?

Hmmmm.... a contentious point!!! As far as I (and Bertil) can see it
does not like Magic AT ALL!!

It ought to run easily within 1 Mb. If you actually want to connect
you will need a modem, of course, but, as I can't even get it to
browse, this is pretty irrelevant to me :-(

: Next question: How is compatibility with GEM apps? Specifically, I want to
: run CAB 1.5 or the demo of 2.0 at 800x600 in 256 colors.

: Currently, using the TOS ET4000 drivers the browser chokes. Is there any
: reason to believe that the ET4000 version of NVDI might address this?

Yes. I was unable to run CAB reliably under the drivers that came with my
Crazy Dots. With NVDI ET4000, however, CAB works perfectly. I actually
found that some applications (an older version of Kandinsky, for example)
worked better on the graphics card than they did in TT Hi.

You should be aware that the version of WDIALOG that comes with NVDI
ET4000 4.11 (or my copy anyway) is incompatible with Geneva, so you won't
be able to run some of the utilities for NVDI. Get an updated version of
WDIALOG (I forget where it's available :P) and you should be problem-free.

Well, what did you enter in magx.inf and what is your Apps-path? Remember
that the path for autostart applications you find in the default magx.inf
after installation changed (in MagiC 4, IIRC) from \auto\apps\ into
\gemsys\magic\start\

Ciao

> a set in my Falcon about a year ago, and it does make a real difference
> in the feel of the keyboard, albeit still not exactly like a PC
> keyboard - at least it's no longer mushy-feeling.

I installed this item on a 1040 and thought I'd give a hands-on
(literally!) opinion: I HATED IT.

My intention was to alter the tactical characteristics of my keyboard,
not to make the keys harder to push. I'm a touch typer and it only
took a few days before my fingers and carpal tunnels started to
complain. IMNSHO this is NOT a good product.

>rather than equal sign).

Err, Ahhhh, the "=" was a typo on my part ;) The "\" are created by WS
when you click on Editor de texts. There's no way to edit this as your
file selector one finds the file and WS displays it in the box(with "\")...

WS also uses "\" in all it's doc's htm's(see your tool bar). Not sure
why they do this as all URL's generally "/". It's no problemo.

Of course this beggs the question, how do you call up the text editor to
read/edit mail/news? I guess not to many people have this working.

Regards,

Charles

Hi Charles,

in a message dated 20 Nov 97 Charles Silver wrote:

CS> Err, Ahhhh, the "=" was a typo on my part ;) The "\" are created by
CS> WS when you click on Editor de texts. There's no way to edit this as
CS> your file selector one finds the file and WS displays it in the
CS> box(with "\")...
CS> WS also uses "\" in all it's doc's htm's(see your tool bar). Not
CS> sure why they do this as all URL's generally "/". It's no problemo.

Afaik, '\' is normal on Atari. '/' in URLs is the unix one.
The '\' is not created by WS but returned by the gemdos.

CS> Of course this beggs the question, how do you call up the text editor
CS> to read/edit mail/news? I guess not to many people have this
CS> working. ---

But I have te same problem as you, using Everest as the editor :-(
I should have missed something, and it's not a language problem...

Bye Charles,

That's life ;-)

Hi, It seems that what you are really looking for is magic.
Magic IS not FREE though, but simple, and no unix reference.
You will lose a lot from mint, but since you just want the GEM part,
magic should do enough for you.

(and god knows if I don't like magic)

hi again, what mint problems?
Xaaes is buggy, that's not a problem, it's an unfinished beta.
Multitos has a better compatibility, Yes Multitos was supposed to come
with every Falcon system. I am surprised that your C_lab didn't come
with a copy of multitos.

Direct all responses in E-Mail to: bensmith@teleport.com

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or
keep track of your Mailing/Shipping address. To expedite your order,
include your Mailing/Shipping address and it wouldn't hurt to include
your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff
that needs work you can have some ***FREE*** Atari stuff for the cost
of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard
Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some
thing you've been looking for, Something you might want & something New
to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml.
And Jump to my FTP site linked to my Web Site so you can Download Free
Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if
you can't get Catalogs that way, Feel free to Request catalogs through
E-Mail. Really, it's no inconvenience. I do ask that you specify Atari
8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not
Snail (Postal) Mail. Please let me know if I can't attach files to your
E-Mail. I will get back to you after the weekend. Please Direct all
Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Looking for an Atari Mega 4 ST. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade. I need to test the Mega 4 ST before I pay. I was recently burned by an old friend who said the Mega worked. He couldn't refund my money. I can't afford to be burned like that again. Please do not reply here as I dont read message bases. Please direct your reply through E-Mail to bensmith@teleport.com or call Ben at: (503)256-9974.

P.S. I'd need to keep this transaction solely in the United States.

if it's the TT-Touch keycaps from Best Electronics, I've installed
a set in my Falcon about a year ago, and it does make a real difference
in the feel of the keyboard, albeit still not exactly like a PC
keyboard - at least it's no longer mushy-feeling.

actually, these caps replace the existing grey plastic cups inside
the keyboard.

I own a General Music WS/2 keyboard (for making music)
I know there is some software for it (I own an old versionof a program
called switch)
This software is for editing music style etc.
I have heard of a program called stylemaker (a newer version of Switch)
Is there anybody with some knowledge of thes programs (Where can i buy
them)

The Switch program has a copyright Axel Sch&#65533;fer Essen on top and is made in
1991.

please let me know

Yes Michael, they are called FTP site which stands for File Transfer Protocol. They are mostly located at colleges which have computers setup as "Servers" to feed the files to those requesting them.

I believe there's a list that get's posted her fairly often, if not, I'm sure you can e-mail me and I'll find you a copy if you can't find it yourself. There's megs and megs of various programs out there. There's also some CD-ROM's of Atari software, one of the better onces is called the Suzy "B" double CD-ROM set.

If I were you I wouldn't get my hopes up too high. It is still a very buggy program. For some reason, most of the bugs are due to bad or no response at all from the GEM objects (buttons, menus, popups, etc...). As far as I'm concerned I get 3 bombs each time I access the net after the PPP connection is established.

Anyway, the URL is http://www.imaginet.fr/~oxo

Minimum setup is a 1Meg STF with floppy, but a HD is highly recommended. You will also need to put a text editor on your disk for email/news.

Tos is rather more flexible in what filenames it will create than in what the desktop will show! The stuff below elaborates.

>I personally don't like leaving this junk on my HD, thus the E5
>or 00 00 00, etc. That's why I replied to Kev's message.

I agree somewhat. Bear in mind that in the above case it is probable that a valid file has been created so you could end up with floating clusters. You can test this quite easily using your disk editor.

The first 11 bytes of the directory entry is the 8+3 filename - it's not 12 bytes because the '.' part (as in fred.txt etc) never appears as anything but a '.' so there's no need to waste a byte in each entry storing it because you can figure out if it needs to be printed or not.

As you know, $E5 in the first byte of the name signifies a file which has been deleted. More precisely ...

An entry in the directory structure consists of 32 bytes, the first 11 of which is the file/folder name. If $E5 is found in byte[0] then tos knows the entry has previously been used and is currently available for reuse.

An entry which has never been used ever has all the bytes of its name cleared to $00 (in reality all 32 bytes are zero but irrelevent here).

An entry which does not use all the characters has the associated bytes set to $20 (spacechar). Thus the name "A.B" would be stored as

$41 $20 $20 $20 $20 $20 $20 $20 $42 $20 $20.

In contrast, the name "AB" would be stored as

$41 $42 $20 $20 $20 $20 $20 $20 $20 $20 $20

tos does not display the '.' char here because all 3 bytes
corresponding to the file extender (the last three) are spaces.

Because the '.' can never be made to appear in an entry by anything
the user/program does, tos uses it internally so you will in fact find
two entries that use it. In entry[0] of a subdirectory you will find
an entry called simply "." and following it in entry[1] there is a
second called ".." - both being crucial to folder traversal so '.'
must never be hacked into a name. Entry[0] is a pointer to itself and
entry[1] is a pointer to the parent folder. The two have a direct
correspondence to command shell operations such as "move .*.txt .."
which would move all the *.txt files from the current folder up into
the parent folder.

Armed with this, it is worth hacking in a unique name, rebooting, then
dragging it to the trash. If tos doesn't complain then all is well -
if it does, hack in the $E5.

As none of us are privy to the intricate details of how tos works it
is inadvisable to hack $00 into an entry's name.

>So a word to the wise. If you download a binary file from Usenet or elsewhere
>from an anonymous poster, it's a good idea to put the sucker in a RamDisk
>to decode it. This is true also for zip,lzh files(any binary). Sometimes it's
>a corrupted file by mistake, sometimes not. Anyway, sooner or later, it will
>happen to all...

Another thing I've found useful over the years is to extract dubious
material onto a partition which is dedicated for the purpose. That
way, when things foul up it only takes a few seconds to zero it and
reboot.

>---
>CU,
>

3COM sells an ISDN modem called the Impact, it plugs into a standard serial port and by using ATDT you can dial like a normal analog modem, by dialing ATD you will dial by ISDN and get ISDN access. Impact requires no special drivers, but you will need a PC to configure the SPID's on it because it comes with a DOS based program for configuration.

Thankyou, this is exactly where I was going wrong. I'd read somewhere that applications had to go into auto\apps but when I tried putting them into gemsys\magic\start everything worked just fine.

Thanks for the help.

Like Michael, I've always had a soft spot for EdHak (now Edit Plus)
which is still being supported by it's author Craig Harvey at Clear
Thinking Software (e-mail was: 73047,600 on CompuServe).

Look around for a demo (or e-mail me and I'll send you one!). It works
as either a .PRG or .ACC (by simply renaming) and even works under
MagiC(PC).

I know that I have done this myself several times.

I meant instead of making the file 'deleted' with the E5 trick and
possibly leaving odd entries edit the name in the E5 way but replace
the odd characters with legal ones.

Rich.

Hi,

Yes it works this way, only my Hades is so slow now, a little bit
faster than a TT030.
Furtunately if I run the Hades_b2.acc from desktop afterwards
everything seems to work alright.
This is however most likely not the proper way to do.

Fredi wrote a small program

Well.. according to the Web page, it can have Et-4000, ET-6000 or Mach
64 graphic card. I've choosed the ET-4000 (NOVA), because was cheaper than
Mach 64 and ET-6000 wasn't yet supported when I bought my Hades.

Geneva provides all this, too. Maybe not so much the GEM extras, but
certainly multitasking and a nice speed increase. For what applications
I run, Geneva 6 has been very stable and reliable. Having used a number
of previous releases, it just gets better all the time.

Not if you write directly with an editor. You can use Zorg for example.

Btw I recall having a problem one time with a folder. It's name was the same

as the 'volume' one and I could not rename it directly from the desktop. Zorg

was helpfull (as usual).

Hello jhh,

Ditto what the other guys said. Also..... best to stay away from Western Digital and IBM SCSI drives. You MIGHT be able to get them to work, but why fuss around when you can get others that DO work fine. Such as Seagate, Quantum, Maxtor, Fujitsu, Conner, and I think the removable cartridge units from Iomega and Syquest work fine too. I do know of 2 people using Syquest's "EZ-Flyer" 135meg drives without problems. If you plan on doing any digital audio recording, then the requirements get a little more strict. There are some drives that work fine on the Falcon, but NOT for audio. I posted a similar question to yours (except specifically about drives for audio recording), but got very few responses. Check out Claes Holmerup's web page.... lots of good info there. I might suggest you take your Falcon's SCSI cable into the shop to make sure you get an external unit with the right kind of SCSI connector - that way avoiding having to buy some sort of adapter. Good luck!

David Bolt (dbolt@my-ste.demon.co.uk) wrote:

: First, are there any problems using GFA basic with Magic or Geneva? If so,
: what and can they be easily solved?

Just get the GFA patches and don't forget to free any memory
you don't need at the start of the program
(eg. use RESERVE <new amount of mem>).
And you'll have to write clean GEM code. (don't use GFA's window routines
for instance, although I don't know why...) And don't write into memory
that doesn't belong to your program.

: Second, what are the advantages/disadvantages of using Magic and Geneva?

Advantages: you get, among other features, multitasking and cool GEM extras,
and (at least with MagiC) a nice speed increase.

Disadvantages: Takes up a bit more memory than plain TOS+GEM, shouldn't
be any problem with 4 Mb though...

I got MultiTOS with my Falcon, but not SpeedoGDOS as the americans did :-(

> C-Lab Falcon. Does this make a difference? Can I still get MultiTOS from

Go to Katherine Ellis' homepage (www.primenet.com/~kellis/) and download the
KEMD-package. It includes the latest (unofficial) GEM.SYS from Atari.

Then download a MiNT-kernel (1.12.6 or newer) from any good ftp-site
(ftp.funet.fi is a good place to look).

> somewhere? Would that solve some of my Mint problems?

What problems exactly? MiNT and singleTOS isn't generally a good idea (for
some reason it runs in supervisor-mode a lot and hogs the CPU under MiNT),
so running the latest GEM.SYS should improve things.

From: garn9114@kutztown.edu
Message-ID: <652oot$h6h$1@jake.esu.edu>
Source record: 113328

Hi :) I'm having problems getting STING to run under my new ISP.
The problem is this: their weird :) After I connect, instead of getting a
happy message saying 'Your IP address is x.x.x.x' it spits out a jumble of
characters only recognizable to the software packages they support, which
are probably Micro$oft (those bastards!). Now I've played with STING
about as much as I can and I don't know how get it to recognize and start a
link, but is there something that I'm missing? Is this true of anybody
else's ISP and they were able to solve it? Does somebody out there at
least know what the jumble of characters is and is able to give me an
explanation so I don't sound like an idiot when I already talk to their
moronic tech support people?

Thanks in advance for any information you can give that will help
solve or at least explain the problem. Please send responses via email
becuase, unfortunately, I am not able to read this wonderful news group
enough to get all posts.

Thanks again!
George Garner

Retreived mail ? Wow! lucky guy!

I would be quite happy to help with the language problems, but I'm still
persuaded that the program is still too buggy to be worth it for the
moment.

Any drive works. There is only one thing to remember with Quantum
Fireball drives: You can't boot from these drives. This doesn't matter
if you boot from IDE, of course.

Hi there,

It has been some talk about ASH and their PPP-Connect and
that it has no clients and that they are trying to take over
the world. Anyway, they have released a screen shot taken
from their coming email/news client for PPP-Connect and
you can't atleast complain on ASH that they doesn't make
good programs when they do something. This one looks realy nice and
if we are going to judge from the performance from their
other products I think it will work as nice as it looks.

And, just to add to what others have been saying, there is even a NEW magazine - Atari Computing - available by subscription.

When AtariWorld closed it's doors, a bunch of us on CiX decided not to let the platform die and so formed the Atari Computing Group out of which sprang the magazine.

It's bi-monthly, packed with news, features and reviews and, if you get to any of the national Atari Shows (organised by Mike Goodman) you'll even be able to buy a single copy!

n> ones written yet). I was wondering if the C-Lab machines have this same
n> serial speed limitation, and if they do, how can I get that upgraded to
n> work with the new modem I am getting soon? Thanks for any info!

Assuming that C-Lab have left the serial port unmodified, you have to put the progs MFP.PRG and SCC.PRG from the HSModem 7 archive in your auto folder in that order, and near or at the end. Then point your comms software to point to modem 2 where you will be able to access the higher speeds that your new modem wants. Some older software won't know about speeds faster than 19200, in which case HSModem maps the higher speeds onto the slow speeds (below 600 IIRC), but I can't remember the exact figures ATM.

Speak to 'ya later!

FROM: SSweet@fortress.org.uk
SUBJ: Efficient Bootup Setup: HD

CS> Just curious if anyone remembers the best way to set up a boot drive
CS> (C) so that the files are setup in the most efficient order.

Well if you want the fastest boot then start with your HD driver software,
then all your AUTO's in the order of execution such that youve got AUTO.PRG,
AUTO.INF/CFG/etc followed by ACC.ACC, ACC.INF, if you do it that way then the
chances are that if your auto's and acc's are small they may well just get
fetched fromthe disk cache anyway.

CS> If this is totally unneccessary, that info would be helpful also...

It will only really make a difference if youve loads of AUTO's and/or ACC's.

CS> P.S. I defrag/optimize regularly :)

That will be your biggest increase in speed.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

|How about anywhere in Texas?

Craig,

I haven't talked to them in a while, but there used to be a place
in Hurst (outside Dallas) that dealt with all Atari products
except for the ABC (Atari Business Computer) line.

The Name of the place was Megabyte Computers of North Texas.
They were good folks who understood the machines and charged a
very fair price for their work.

Good luck,

Joe Mirando @ STReport

2765. Need Help on a Mega2 ST

Newsgroup: comp.sys.atari.st
Date: 1997-11-22 00:00:00 UTC
From: Jeff Thomas <Yanni@mindspring.com>
Message-ID: <01bcf797$4399b340$160456d1@jeffthom>
Source record: 113199

I am a proud new owner of a Mega2 ST that has been upgraded to 4 meg. I have a few questions about it.

1. It came with a 50meg SCSI hard drive in a home made box. The controller is an ICD. It works great but the HD has been partitioned to three drives. One 20meg and 2 - 15meg drives. Is this because the user wanted it this way or does the Atari not recognize any drive larger than 20meg? If not, how big can I upgrade to?

2. How do I hook it up to the NET. I have an external 14400 modem, which seems to work great. I also see that 19200 is the fastest speed that It can go...So I guess I should not buy a 33600 or is there something that I can do to make it faster.

Thanks in advance for any help.

>text too. And the mouse controls the scrolling and program exit without
>any GEM mouse pointer.

I was planning on writting a text file viewer myself. Now it will have a
GEM interdace for loading and printing, but it'll mostly be just a full
screen of text you can move through using the mouse buttons.

What will make this different is that you can switch between reading in 40
columns or 80 columns. Let's say you downloaded this game and you have
the desktop set in low resolution. You want to read the text file that
came with it, but that means you have to reset the ST to use medium rez
and go back to low rez to play the game. But now you can run the viewer
in low rez and read the file in med rez. And if you are using a TV(?!),
then it will reformat the text to fit in 40 columns making it easier to
read.

Right now, the only program that can switch to med rez on the fly is
QuickView...but it's long in the tooth and wasn't made for total
compatiblity with the newer machines(for the reason that they haven't been
invented yet). So if anyone would be interested in a simple text viewer
then I'll see if it's worth my while to start planning it. Let me know
what other features you like to see, maybe search for a word or an option
to display in a GEM window(for multitasking OS's running GEM games).

Well, just to give an update, I have downloaded Master Tracks Pro, as well as an Atari ST Emulator for my PC.

I used PaCifiSTST (emulator) , along with assiST (front end) and TOS's 102,104, and 162. After crashing Win95 a few times, I managed to get it to work... Kinda creepy to look at my PC and see my ATARI ST staring back at me...

Anyway, there is all is. Thanks to all who helped.

Can I use a Syquest EZ-135/Jaz/ZiP drive on an ST?
Can I read/write BigDOS/FAT32/VFAT/Win95 on Atari?

Since Uwe Seimet provides intelligent answers to all the above,
I was wondering if he would care to prepare an "Atari HD FAQ"
and make it available on his homepage?

I would gladly put a link to such a FAQ on FUNKYWARE (and
upgrade to HD-Driver 7.0 if it was still sold in Canada).

***

Speaking of HD-Driver, I notice v5.13 does not recognize an EZ-135,
even though the utility to parse the SCSI chain that's included does.
However, good old (read: outdated) AHDI 6.05c manages to find it.

Any ideas why, Uwe?? ;-)

These need to go in C:\GEMSYS\MAGIC\START\ - or alternatively change the
#_APP line in your MAGX.INF file to point at the path where you have them.

IIRC TOS regards the first entry with byte[0] = $00 as the end of the present directory, meaning that any files with entries after that don't show up in a listing. The only ways to show they again is to either create a file that fills in the blank entry, or use a disc repair tool that will compress the directory and fill the blank.

I think it would be better to use $E5 instead of $00, and then use something to clear up the unassigned cluster chain.

>let the platform die and so formed the Atari Computing Group out of

Thats about the most self centered bag of crap I have read in years,

Nothing against AC or its goals and aims, but to say a bunch of YOU
decided to keep the platform alive is bollox and rather insulting to
the rest of the community, the phrase "Big headed" springs to mind ?

>It's bi-monthly, packed with news, features and reviews and, if you

No its not bi monthly.. big headed and talking bollox ? News ?...
dont make me laff..With the best will in the world you could hardly
call it news ?

>get to any of the national Atari Shows (organised by Mike Goodman)
>you'll even be able to buy a single copy!

Yeagh..? I went to the last show, they had copies a few months old
for sale..hardly new, hardly packed with news..hardly bi monthly
>
>Ian B
>
>Support A|C|G - Buy Atari Computing magazine

About the one line in your post that makes any sense :)

I hope AC last for years to come and wish them no ill.. but for you
to say that they are the saviours and you "decided" not to let the
atari die is a big fat insult to the rest of the atari community, then
to try telling us its bi monthly when its not, tell us its full of
news when it always the last to publish anything... well your talking
bollox arn't you :)

I have to concur with Uwe on his last point on IBM and Western Digital drives - one of the drives in my homemade HD tower case is a 100mB IBM (made by Western Digital!) that I've had for the last three years, and which I have used successfully on my STe and my current Falcon. Originally I did have a problem with it being recognized by the computer, but thanks to my brother tweaking the termination it works fine. Other drives I've used along with it have gone (including a Seagate that lasted all of three months, and a DEC that is suffering from a write problem involving bad clusters that won't go away no matter if I reformat the drive), but the IBM (and my EZ-135) still merrily tick away and do their job. In fact, next week at ComputerFest (an event held four times a year in the Toronto and outer areas) I may be going to see IBM about getting another disc drive to replace the flaky DEC.

2783. Atari A-Z book hypertext file

Newsgroup: comp.sys.atari.st
Date: 1997-11-22 00:00:00 UTC
From: msbaines@cix.compulink.co.uk
Message-ID: <EK25A6.EvI@cix.compulink.co.uk>
Source record: 113273

Some of you, especially those in the UK, will know I produced a book - "The Atari A - Z, a dictionary of computing terms for the Atari computer enthusiast" a couple of years ago which went through several prints. All copies are sold out and I won't be doing another re-print.

For newbies not familiar with the book e-mail me for a description or ask here for a recommendation.

There have been many requests to release the text files on disk. I will not, under any circumstances, release ASCII or formatted text files.

However, I have considered converting the book into a ST-Guide hypertext file, but only if the user was prevented from turning the hypertext file into an ASCII file. Fortunately this facility is now available, I can encrypt the hypertext file preventing the user from decompiling it.

So, I am in a position to try to convert the book into a ST-Guide hypertext file (please don't ask for a HMTL file). To be honest, I'm not really sure if it's possible and how viable such a huge file will be. But, before I commit myself to this not inconsequential task, I need feedback from yourselves.

I am thinking of a release on floppy disk, each HYP file personalised with the buyer's details at the following costs which include postage:

UK: 8 UK Pounds
Europe: 9 UK Pounds
Elsewhere: 10 UK Pounds

Payment will be by cash, cheques (drawn on UK banks only), postal orders, Eurocheques, American Express Money Orders and Bank Drafts in UK POUNDS STERLING only. Cheques etc must be made out to "Mark S Baines".

Primarily, I want a commitment from those who want a copy of this disk. I'm looking for a minimum order of 50 before I will even start thinking about this. No work will commence until then.

Remember, this will take me many weeks to do properly, it's 2,238 entries, 101 tables and 128,000 words! If you want it, I'll try to do it. If not, I'll not lose any sleep over it, but I will be severely aggrieved if I have to chase people and find I've done this work for nothing!

Initially you can make your promise via e-mail. When and if I decide to do the conversion and it is available I will release a list in this newsgroup of those that have promised.

To date I have 20 promises, half what I need to get started.

Reply via *e-mail only*, fill in the name and date below, edit out the stuff above the line and send.

==========
"The Atari A - Z" ST-Guide Hypertext File

I like the idea of a ST-Guide hypertext version of "The Atari A - Z" book by

Mark S Baines. I understand that Mark has made no promise to produce such a file at any time in the future and understand that it may not be a viable proposition.

However, I promise to buy ____ (number of copies) of the said file and disk if it becomes available at the cost of ____ UK Pounds each.

or to me directly at andrew.styrmo@bbs.trideja.com.

I have a friend who is looking to buy a Pure Pascal program for
Atari and possibly books on Pascal programming on Atari. If you have
this for sale please contact me.

Thanks.

Bonjour Nick,

I'm not sure how lucky I am <g>. Not only can I retrieve Mail (very fast)
I also can retrieve NG messages also! Unfortunately, NG messages come in
very slowly. It took 2min to get only 40 messages(headers). I then can get
each message to download quickly. If you have the time, I think it might
be helpful if you could translate the MN2.htm doc in WS v2.3. As an aside,
I might say to all the Magic users, WS (all versions) work fine with
MultiTOS/MiNTv1.142. How's THAT!!!

I know that it's a buggy prg, but I'm still interested in getting this
puppy setup to send Mail/News. To do this, one must get a text editor to
work. AFAIK, WENSuite will not allow you to run other prg's, while running
WS (CAB does this well). Also, Mailto: doesn't work. WS thinks it's just
another URL ;(

>Good check storage!
>Also Syquest has a 4.7 GIG removeable shipping early next year.

The 1 gig drive would be the SyQuest SparQ. I first became aware of it when I recieved my newest issue of Computer Shopper, and noticed several ads for it. The drive price is great, but the media price is what really impressed me! $33 per cart (if purchased in a 3-pack), is cheaper than some tape media (certainly cheaper per meg than the DC2120 tapes most "250meg" QIC tape backup units use), and even fixed hard drives (try finding a 1gig drive for $33, or a 3gig drive for $99 <grin>).

A SCSI version is due out in '98 for the rest of us, but Falcon owners would likely be able to adapt the internal EIDE version for use.

For those looking to buy one of these, from what I understand, expect supply problems similar to the first ZIP shipments...backordered out the wazoo since demand exceeds supply, and limited cart availability (at least at first) due to the same problem.

There are 4 BJ drivers: 10, 10E, 130E and 330. Not sure if any are color
drivers. The 330 driver should work for B/W only on a 600.

Your Right. In that case I'd recommend Guck. It'll show a lot more than
text too. And the mouse controls the scrolling and program exit without
any GEM mouse pointer.

Why, Tony? Just because a bunch of us on CIX decided to get an Atari magazine going by putting our hands in our pockets - and we are proud to have something going which is quite successful...

Do you really think the Atari platform could survive as much as it currently is doing so without a printed publication?

I'll even go as far as saying that apart from repeat business, none of the advertisers may even have stayed in the Atari market without the magazine...

So how can you say that what Ian said is bollox?

> Nothing against AC or its goals and aims, but to say a bunch of YOU
>decided to keep the platform alive is bollox and rather insulting to

OK, maybe Ian's comment can be rephrased to - we decided to help keep the platform alive - it was pretty much dead in the UK anyway and we believe that we have spread the Atari word - this is seen by the number of newer subscribers there are to the magazine - isolated Atarians who did not know about their Atari having an enthusiastic following.

>the rest of the community, the phrase "Big headed" springs to mind ?
No, just plain Proud.. and quite rightly so.

> No its not bi monthly.. big headed and talking bollox ? News ?...
>dont make me laff..With the best will in the world you could hardly

No.. and please dont twist my words by asking a question as if quoting me, I never said any such thing, dont be so obtrusive Danny, that wasn't my point, and you know that by my comments furthur on,
>
>Do you really think the Atari platform could survive as much as it
>currently is doing so without a printed publication?

No I don't..and I never said it would, and I never said AC was a mistake or a bad thing, stop twisting my words, I made a point about Ians "we are the saviours" attitutude, how a group decided to keep the platform alive.. thats whats bollox,
what do you think every ATARI BBS Sysop is doing, or every ATARI programmer is doing.. or every ATARI diskmag or every ATARI pd library.. get off you high horse mate, we are all thankfull for atari computing, I know I am.. but to enter a public forum and tell the rest of us that the people in cix decided to keep the platform alive is pure bollox and no amount of word twisting by you will change that..

>
>I'll even go as far as saying that apart from repeat business, none of
>the advertisers may even have stayed in the Atari market without the
>magazine...

Dont talk wet!.. some would have folded yes.. but not all ? and why are you saying this?.. i never said AC isnt helping, they are.. they are helping me certainly..... but it wasnt there decision to keep the atari platform going was it?
>
>So how can you say that what Ian said is bollox?

I can because it is.. YOU are now twisting my words to say something
else, this is beneath you danny, I am suprised that you want to twist
this into something it isnt, my posting was quite obviously about his
attitude that AC is the saviours of atari..if you believe that
then.... tsk
but now you are bringing things into the thread that I never said or
even thought ?

>
>> Nothing against AC or its goals and aims, but to say a bunch of YOU
>>decided to keep the platform alive is bollox and rather insulting to
>
>OK, maybe Ian's comment can be rephrased to - we decided to help keep

see ?.. you did know why i posted.. so why the shit stiring ?

>the platform alive - it was pretty much dead in the UK anyway and we

what ?... can I quote you on that ?.. your telling me the atari scene
in the UK was pretty much dead?.. get real :(((

danny you have jumped into this thread for the wrong reasons, i was
having a go at someone for telling me he decided to keep the platform
alive, you wanna change this into something else then do so.. but dont
pretend its me..

>
>> No its not bi monthly.. big headed and talking bollox ? News ?...
>>dont make me laff..With the best will in the world you could hardly
>>call it news ?
>
>Eh? what are you on about?

Danny.. try looking at facts.. show me an issue of AC that had news
in it that wasnt released at least a month earlier in every atari
diskmag going, or wasnt already flogged to death on the
internet...dont argue something you know nothing about?

>>for sale..hardly new, hardly packed with news..hardly bi monthly

>The current issue (at the time) was on sale at the last show - you are
>talking bollox yourself. ;)

tut tut tut.. your right.. the current issue was on sale.. and how
many months old was it... whoops i mean is it ?

>> I hope AC last for years to come and wish them no ill.. but for you
>>to say that they are the saviours and you "decided" not to let the
>>atari die is a big fat insult to the rest of the atari community, then
>
>OK, tell me.. which other English Atari mag do you know that covers
>things in the same way/depth that AC does?

none.. and what are you saying..i have never said atari computing is
wrong.. i said the attitude that they are the saviours is wrong, i was

attacking that attitude NOT the magazine. so why are you asking me stupid questions like this ?

>>news when it always the last to publish anything... well your talking

>Last? where else (ie which other English publication) have you read
>the news in first?

st+ diskmag released every 4 weeks.. it cant compare with atari computing in every sense bar news..and please dont come back telling me how crap it is.. i dont care.. the subject is.. which is first with news.. and st+ diskmag being released every 4 weeks and in touch with all the advertisers AC is and more??? gets the news.. it isnt as good as maggie diskmag or atari computing magazine.. buts it does get the news and gets it first.
every single atari computing so called news release was at least a month after theres,

i know your going to start telling me how you cant compare a diskmag with AC and i will agree with you in advance.. but I am right that it gets there first with the majority of the news... i wasnt going to mention that.. but you asked :)

let me stop and say this.. i am not and have never attacked AC.. only this one persons attitude that they are the saviours.. it belittles the efforts of the rest of us :(
YOU are twisting my words to mean something else ??? or do you think AC could survive without the community ?

.

>but found using a Sector Search.

I was getting corruption in the partition where my CAB cache was, too.
For the longest time I never knew why. But then it dawned on me that
sometimes after surfing I would disconnect STiK, read the last page
fetched, then do either a cold boot or power-down without exiting CAB.
The cache is updated when exiting properly, so this is what I do now.
When the corruption did occur, ICD's Cleanup reported all sorts of
trouble... directories with garbage, bad filenames, invalid FATs,
cross-linked files. I can recreate it, too.

But if you're exiting CAB correctly, then the source of the corruption
is elsewhere.

|
| I would be grateful for any advice re sorting this problem,
|and choosing the best driver for the system, and where to get it.

Mike,

Yup, I had the same damned problem with my MegaE and ICD 6.5.5 and
my mono monitor. My solution was to buy a TT and a VGA monitor. <G>

Actually, the problem was maddening because the same setup worked
just fine on my 4 meg STacy. They even use the same host adaptors.
The only real difference was the TOS version. I had 2.06 in the
MegaE and 1.4 in the STacy.

HDDriver does work nicely with MagiC, but I'm just so darned used
to the ICD booter that I couldn't bring myself to use HDDriver all
the time.

The multitasking DMA is simply the ability to read from the floppy
while writing to the hard drive at the same time and vice versa...
Did I say "simply"?? Excuse me. This must have taken a bit of
programming to get it to work correctly and safely... which it
does, by the way.

The other reason that I don't use HDDriver is that the version I
boutght doesn't support either my FLOPtical drive or my CDRom...

two of the things I can't live without. I understand that there is support for both of these things now in the most recent version(s).

Good luck,

Joe Mirando @ STReport

Hi Mike.

I had similar problems as yours in my falcon using Magic 5.03, and
I found that replacing the ICD driver with AHDI and reformatting, the
problem was gone. Eventhough there is an AHDI compatibility option in the
ICD package, Magic refused to boot until I did change the format of the
drive...
I will change to HD driver when v 7 is made available in the US,
or if this doesn't happen, I'll get an older version :-(... but I think
the replacement is as simple as installing the new drivers in the boot
partition. The change is in the routines to access the drive, and don't
require a change in the format of the drive. I recommend you to go for HD
driver, in the UK you can get the last verison from Systems solutions...
cannot be wrong ! ;-)

Regards.

Daniel.

>>1. It came with a 50meg SCSI hard drive in a home made box. The controller is an ICD. It works great but the HD has been partitioned to three drives. One 20meg and 2 - 15meg drives. Is this because the user wanted it this way or does the Atari not recognize any drive larger than 20meg? If not, how big can I upgrade to?

>>2. How do I hook it up to the NET. I have an external 14400 modem, which seems to work great. I also see that 19200 is the fastest speed that It can go...So I guess I should not buy a 33600 or is there something that I can do to make it faster.

As to question 1, it is most likely that you are running TOS 1.04 or an older version of TOS .You should be able to format a partition to 16 megs and the rest of the drive as a BGM partition this will also give you compatabtily with the older versions of TOS. If you don't care about this than of course you could fromat the whole drive in a BGM partation. The better thing to do IMHO is to get a compatability board and upgrad TOS to version 2.06 You can get the board and TOS chips from Best Electronics in San Jose. Personally I am running a Conner 1.06 Gig hard drive on My upgraded Mega 2 with TOS 2.06. Am also running the same on my MegaSTe

As for question 2. As with most products that came from Atari, the ST series was never designed to run a modem above 19200 baud. This is a hardware problem. There are a few hardware modifications out on the internet and on some local BBS's that explaines how to modify you ST to go to higher baud rates. Though I have never made any of these to my machines. If you planning on buying a 28.8 or a 33.6 modem for the ST, don't waste you money if you don't plan on doing the upgrade to get the most from these modems, but if you can buy one cheap, by all means it would be the way to go I think. I am running a 14.4 fax/modem on my mega2 and a MCC 28.8 on my megaSTe though I can only get 19.2 from the 28.8 modem.

Try using the JPEG6. DJPEG is able convert to GIFs, then you can use GEMView
to convert to .IMGs. BTW, I'd probably convert them as grayscale, rather
than as coloured, images. They seem to print out better, in mono anyway.

> Every answer so far has been to offer GEM text readers... I can't
>think of anything more boring than reading text in a GEM app.. it
>doesn't matter how many bells and whistles it arrives with, its still
>boring GEM and the guy only wants to read text :) not cut or paste,
>just read in a nice friendly and especialy easy on the eyes
>enviroment, even die hard ATARIans cant say GEM are all these... yuk!

If you mean something that puts a text file in a GEM window, then I can
see your point being you really need a powerful machine and a newer TOS
just to make it look good. But for me, the best way for a GEM program to
display text is to use a TOS screen...meaning like the Show/Print from the
desktop. Nothing's faster than VT52 scrolling and the blitter chip really
improves things. I have no problem with just using the desktop viewer
except the mouse scrolling is off, you can't go back and read what you
miss...not to mention having to use Set Preferences to switch resolutions.

And if you have something like the Monitor Magic accessory that changes
your screen to pleasant colors like VDU green, amber, and even a pleasing
blue desktop with a not so harsh white background then it isn't so bad.
That's why I can stand using the Terradesk viewer(text in a window)

But hey, use whatever you want to use be it written in GEM or STOS. I
only know what I like and only you know what you like :)

I ment using the Set Preferences option, it virtually has to reset the
machine to switch rez's on older ST's.

>>Right now, the only program that can switch to med rez on the fly is

>but happily display in medium and change resolution..

They're all written in STOS and you wrote them all matey! :)

Yeah, I use the Stosser Multimedia Displayer to read the STOS tutorial
files that are Ice Packed. The only bad thing I can say is that I miss
using the mouse buttons to scroll through the file.

I wanted to write a rez switching viewer ever since I got my STe 5 years
ago. At the time, I could only do it in STOS Basic since it's easy to
just type 'mode 0' or whatever. But it took my a while to figure out how
to get something like that to work with out dragging, and I wouldn't use
anything less than Missing Link text commands.

But...I also would like to try my hand at a GEM program because I wish to
become a Jack of All Trades :) I was going to use old GST C which would
be difficult but now that Gemma STOS came out and you can write GEM

programs in STOS(hahaahaha!!) then that would be so much better.

Oh don't worry...I still want to write a regular STOS version that you can run from inside STOS basic as the Type accessory is utterly pathethic. It just will "resemble" a GEM interface :)

><smile> hi maddog.. long time no see? :)

Sorry, rude of me to ask a question and then leave for a week...

LDAP stands for Lightweight Directory Access Protocol; it's sort of the
universal network address book for looking up names/phone numbers/other
identity information. Netscape 4 and MS Internet Explorer provide browser
access to these directories now. Do a search from your favorite search
engine if you want to know more about the protocol.

PS: on a completely different topic, check out my new web site

>Does anyone know the codeing for writting there own printer drivers for
>PageStream 2.2 ? Also how about information on the inport and export modules ?

I think this is what your looking for:

http://www.umich.edu/~archive/atari/Applications/Dtp/

Look for: pgst2_2b.lzh

IIRC it contains the source code for all Pagestream printer drivers and
import/export modules. Soft-Logic released this code when they abandoned
Atari support.

There is also an epson stylus driver in the same directory.

Peter Rottengatter <perot@pallas.amp.uni-hannover.de> wrote:
>IMHO someone with a decent understanding of HTTP should have a look whether
>Howard Chu's CAB.OVL for MiNTnet can be ported to the STiK API.

Someone with a decent understanding of HTTP and the STiK API would have a better chance of writing it all from scratch, using my code as a model. I have looked at the STiK API, and looked into updating GlueSTiK myself, but the differences between that and BSD sockets were too many and too aggravating for my taste.

Re: API wars - In My Opinion, the STiK developers made a major mistake in not adopting the BSD socket API, and all of you folks who swear by it now are paying the price for that mistake. BSD and TCP/IP are pretty much inseparable, all of the development of the TCP/IP protocols was done on BSD systems and that is the model that 99% of the world uses today. Yes, even Winsock is modeled after BSD sockets, despite its weird Microsoft-specific features.

The ST has been behind the times on every computing front; ST developers have been continually playing (and losing!) a catch-up game to keep their systems up to date with all the apps and features that other platforms have. The only way to keep up in a game like this is to emphasize compatibility and portability, to allow us to leverage software created in other environments. Sure, once you're caught up and ready to move ahead, you have the luxury of defining your own protocols and APIs. But the ST isn't in that position, it's trailing behind and falling further every day.

The largest body of networking software in the world exists for BSD sockets. Period, end of story. Every major protocol and application that uses networks exists in a BSD socket implementation. Most of those apps can be easily ported to the ST using MiNTnet, because it is socket-compatible. Whether you think those apps are good or not is irrelevant; it is a better use of your scant time to adapt what already exists than to write something new.

I added Secure Socket support to my CAB overlay in a matter of one hour, because all I had to was compile the SSL library and add a couple calls to the overlay. You won't eb able to do the same with STiK. As such, all your STiK-based clients will again be behind the times, and unable to handle Secure HTTP transactions for a Very Long Time. Sure, someone could port an SSL library to work with STiK, if they knew both libraries extremely well. But again, that's time wasted, recreating code that would already have worked in its original state.

Every day I see Atari projects being abandoned due to lack of time or interest. The fact is, the time left to you as developers and users of these systems is

growing shorter all the time. All the time that you waste reimplementing working software is less time for you to spend writing truly useful and usable code.

I'd say now that you have basic functionality available (SLIP, STiNG PPP) your number one priority is getting socket compatibility working. Do it now, while all of your original STiK-based developers are still around, able to rewrite their apps to use the new API. Wait too long and you'll just be stuck with a new set of orphaned software, locked into a crufty old esoteric API.

I did learn that it depends on the level of SCSI (1,2 or 3) and the host adaptor. I bought a Quantum Empire SCSI 3 drive, and found it was recognized on the TT only with ICD HD utilities (don't have HD Driver) and not at all on the STE with a 1987 ICD host. Not sure if the Falcon SCSI is more advanced than the TT.

...OK...My earlier ideas that my problems would be solved with a ST emulator were incorrect (I bow to all those who will now be crying 'I told you so!')...

It seems my best option will be to get myself a MEGA STE - So, does anyone (in the UK) have one for sale....

My best offer, so far, has been a 4 meg Mega ST (just the CPU & keyboard) for £90....Can anyone do better? Tell me your price (obviously a STE would be better for me).

I would also like to hear a price for a High Res Mono monitor AND a decent hard drive, etc....

A big thank you to everyone who has helped me so far...

Hopefully I will have a ST and DA VECTOR up and running by Christmas!

Beaty

I hope to work with vector files on a ST (using DA VECTOR)...

However I wish to convert them for exporting to a PC for work.

Does anyone know of a way (or a utility) that will convert ST vector formats to PC/MAC vector formats (such as Freehand or Illusrator) OR do you know of anything that will convert ST vector formats (GEM Meta Files) to raster file formats (such as GIF, TIF or JPEG)?

This is a tough one I know...But I remain hopeful!!!

I have heard tell of a utility called META-BIT that might do some of the job...Have you heard of it or do you have it?

Finally (honest)...Are Atari GEM META FILES the same (and therefore compatible with) PC GEM META FILES???? Have you had any luck in exchanging the two?

Any help please!!!!

Hi,

You have to make sure the magx.inf file points to the start or the
apps folder then it will start all the app or prg in that folder.

The top of your info file should look like this

; MAGX.INF erstellt mit MAGICINF von D. H�pfl
; ==
;
#_MAG MAG!X V5.11
#[vfat]
drives=ai
#[aes]
#_ENV AVSERVER=MAGXDESK
#_ENV HOME=C:\USER
#_ENV COLUMNS=80
#_ENV LINES=30
#_ENV PATH=;C:\
#_ENV _PNAM=MAGICINF.PRG
#_ENV PROMPT=pg

#_ENV OLGAMANAGER=C:\GEMSYS\OLGA\OLGA.APP
#_ENV DESKFMT=C:\GEMSYS\GEMDESK\MGFORMAT.PRG
#_ENV DSKCOPY=C:\GEMSYS\GEMDESK\MGCOPY.APP
#_ENV STGUIDE=C:\ST-GUIDE.ACC
#_ENV GEMJINGPATH=E:\CAB.2\MODULES\GEMJING.PRG
#_ENV BUBBLEGEM=C:\GEMSYS\MAGIC\START\BUBBLE.APP
#_BUF 4192
#_DEV 6 0
#_TXT 0 0 1
#_FLG 0
#_WND 32
; #_TSL 2 32
#_SCP E:\CLIPBRD\
#_TRM C:\GEMSYS\GEMDESK\VT52.PRG
#_ACC C:\
#_APP C:\GEMSYS\MAGIC\START\
;
; ============ Ende des automatisch erstellten Teils ============
as you can see the last line points to the folder which will run any
progam after magic starts.

Also most of the other env files are necessay for smooth operation of
magic These were set by a program which writes out the magic file
with all the settings desired.

I have added the bubblegem olga etc
the
#_ENV COLUMNS=80
#_ENV LINES=30

are for TTmed or vga res
#_ENV HOME=C:\USER
most of the newer programs store there info files in this folder if it
is in the magic inf file.

good luck this setup has worked through magic 4x and 5x really well.
Regards

-snip-

OK, Clayton's turn now-

Dan, some of us don't have a brother to "tweak the termination". This is exactly what I was refering to in my previous posting: Why get something that may need some sort of tweaking that you may or may not know how to do yourself when you can just get something that will work right away. (Notice how I cleverly avoided saying "plug-n-play") ;-)

But, other than that..... Oooops! I was going by the info I gathered while researching which IDE drive (not SCSI) to get for my Falcon's internal drive. I ass/u/me-d that the same thing would apply to SCSI. No?? Sorry for any confusion caused. I think this is how a large portion of Atari users learn - by reading these postings, responses, and so on. Here are a few things I actually managed to find in all my email/ newsgroups folder:

*** KEEP IN MIND THESE ARE IN RESPONSE TO INQUIRYS ABOUT IDE DRIVES ***
(and in case you're wondering, I ended up getting a Toshiba 1.08gig #MK1002MAV internal IDE - works great)

Date: Wed, 26 Feb 1997 16:27:25 -0500
From: Tom Harker <icdinc@compuserve.com>
Subject: Falcon HD support from IDE
To: Clayton Murray <claytone@aa.net>

Clayton,

You cannot use IBM or WD IDE hard drives with the Falcon. Try Quantum or Seagate.

I have had good success with the Quantum Europa series 2.5 inch IDE drives and the Falcon.

It is a problem in the timing of the command frames that makes them not work with the Falcon.

Good luck. Tom @ ICDinc

Then Chris at CompDirect responds to my questions - in (>).

>I tried an IBM 340meg notebook HD, but my Falcon would not recognize it
>despite my trying everything on my ICD-Pro disks. Alex at ATY
>suggested it could be that some IBM drives have their own ROM chip
>which prevents recognition by the Falcon. Any thoughts on that?
>So...I'm off to looking for a different HD. Maybe Conner, Quantum,
>Seagate, Fujitsu, or Toshiba. Around 500meg to 1 gig. Any
>recommendations?

With the IBM drives, they report wrong sector and interleaving etc. under HD Driver. You can set these settings yourself and have HD Driver create a boot sector that should work. You are best to avoid IBM and Western Digital though for sure.

We have had success with the Maxtor, Seagate, Fujitsu and Quantum drives.

All the best,
Chris @ Computer Direct

It's me -Clayton- back again. I've been in contact with Jan (the originator of this string) and he is looking for info on external SCSI drives *FOR AUDIO RECORDING*. He just didn't say those magic words in his original posting. Sooooo.... here we go again! I posted a small list of questions (maybe 5 weeks ago?) asking about people's success or lack thereof with different SCSI drives for audio. Only 4 responses! Then about a week later, Claes Holmerup posted his set of questions very much the same as mine. He wanted to put together a page on his web site answering this question, but he also got very few responses. Mostly the same people as I got. :-(In all those (or should I say "those few") responses, nobody mentioned using IBM or WD SCSI drives for audio recording. Are they suitable? Can I now include them in my (still on-going) research for a good audio SCSI drive? I did try an IBM 7200rpm SCSI drive once.... my Falcon recognized it with no problem, but it had this gawdawful high pitch WHINE. I had to return it!! Keep the info flowing - it's always apprectiated!

2825. MultiTOS set up.

Newsgroup: comp.sys.atari.st
Date: 1997-11-23 00:00:00 UTC
From: rcain@zetnet.co.uk
Message-ID: <6594m7$f88$1@roch.zetnet.co.uk>
Source record: 113220

I am trying to patch together a sort of MultiTOS using MiNT, AES and Thing.

I can get MiNT to "INIT" the AES (4.1) but the AES does not sem to want to execute the "SHELL=<path>" in GEM.CNF to bring in Thing. The command "run <path>" will load Thing OK.

My description of "SHELL=" says it will launch a shell program so why won't it do it for me :-(

Am I misunderstanding something?

>20meg? If not, how big can I upgrade to?

This was just a personal choice - even old HD drivers can manage partitions bigger than this. It is more usual to make the first partition, C: the boot-partition, fairly small (5Mb or so). The others are ad lib. It is usually best to size them so that you can group different sorts of application by partition - makes things easier to find.

The ICD is a good adapter. Is it the "plus" version which has a clock on it? There will be a 1" dia. battery on it if it is.

You should be able to chain another 5 SCSI devices to it (streamer, CD etc.) if you want to. With the ICD adapter you are not limited to devices on which parity can be disabled.

HDs are cheap enough at the moment - you ought to find even better bargains in drives which have been "pulled" because of an upgrade. Look for second-hand of about 500Mb. Nowadays new devices seem to start at 1Gb!!

You could just substitute the new drive for the one you have but it will be more convenient if you make up a new SCSI cable to ADD the drive to the chain. You can then copy stuff between the drives.

Ensure that only the LAST drive in the chain is terminated.

The ICD driver s/w is prob quite adequate but you might consider moving to more modern stuff. There is CBHD which is public domain and HDDriver which is not. Both are quick and intelligent about modern HD standards.

>2. How do I hook it up to the NET. I have an external 14400 modem, which
>seems to work great. I also see that 19200 is the fastest speed that It
>can go...So I guess I should not buy a 33600 or is there something that I
>can do to make it faster.

Yes. Anything above 14k4 is a waste of money with a 19k2 DTE rate.

There is a mod (RSVE/F) which can be made to the serial port to raise its top speed to 38k4 when a 28k8 DCE rate is supportable. If you do it yourself the mod costs very little - just a 4040 chip.

You will need to install HSMODEM to fix glitches in the Mega's serial port.

The decision on networking s/w depends on what protocols your ISP supports. They will ALL do PPP but if you can find one which also does SLIP your path will be smoother!

SLIP: Use STiK as TCP/IP stack

PPP: Use STiNG as TCP/IP stack

As for clients: Newsie is fine for mail/news/ftp. CAB for www.

I'm no expert but the impression I get is that PPP is "standard" to
the PC-world and has been implemented slightly differently by
different ISPs to work around problems with previous bugged PC
clients. So ISPs have patch-upon-patch in their PPP which makes for
unexpected responses to "straight" stacks such as STiNG.

SLIP is largely neglected by the PC-world so it tends to be
implemented cleanly with no "fixes".

The convention is to use 'GEM=<aes>', but I'm not quite sure what the
difference between GEM and INIT is.

> want to execute the "SHELL=<path>" in GEM.CNF to bring in Thing. The
> command "run <path>" will load Thing OK.

IIRC it's 'shell <path>' (a command) and not 'SHELL=' (a variable).

If problem is the formatting - you will need to reformat it to the
Atari standard. If you purchase pre-formatted disks - get PC
formatted versions - you will need to use BIGDOS along with standard
TOS/Geneva or MagiC 5 to be able to read/write to those disks without
having to reformat. The problem is non-compatibility between the PC
and Atari implimentation of partitions larger than 32K in size.
BIGDOS/HardDriver 6 or above, MagiC 5/HardDriver 6 overcome this
limitation. With standard TOS/Geveva and anything else you will be
limited to 32K partitions for cross platform readability.

From personal experience I can tell you that getting a PPP conneciton
with a PC can be a walk on the dark side. It depends a lot on the
provider and the particular sofware that they are using.

2832. Mega STE-Magic 5.11-ICD Driver

Newsgroup: comp.sys.atari.st
Date: 1997-11-23 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <659o75$m17$1@irk.zetnet.co.uk>
Source record: 113227

I wonder if anyone could help re problems installing Magic with a
Mega STE TOS 2.06, ICD v6.2.3 driver and a hi res monitor.

I don't have any problems running the above with a med. res.
monitor.
When I try to boot up with Hi Res, I get the folowing dialogue

Fatal error in Gemos Plus 2 or 3 bombs.
System Shutdown

I have been advised to try AHDI driver which I have a copy,
and if this runs OK to consider using HD-Driver which supports
multitasking DMA. I don't understand this last bit, can anyone explain?

Is it possible to run a different driver to the one that
formatted and partitioned the drive originally, without causing further
problems?

Has anyone else had problems like this with Magic/Mega STE?

I would be grateful for any advice re sorting this problem,
and choosing the best driver for the system, and where to get it.

Thanks
Mike

On witch machine? ST, STe, TT/Falcon?

ST-Series:

Adaptor
Computer DMA to SCSI SCSI Device ID 0 ZIP ID1
##########---############-----##################-----##########-T (Terminator ON!)

TT/Falcon Series:

Computer SCSI Device ID 0 ZIP ID 1
##########-------##################-----##########-T (Terminator ON!)

Mac:

Computer SCSI Device ID 1 ZIP ID 2
##########-------##################-----##########-T (Terminator ON!)

With all:

You have to boot with a ZIP Media into the drive.
Use a Mac formatted ZIP Disk with your Mac
Use a Atari! formatted ZIP Disk with any Atari.

(If you have access to the ZIP, use your HD-Util to format
your ZIP Disk) (To Part. is enough, mostly)

While using AHDI with your Atari, all SCSI ID'2 must be shown as a
line like: ID0,ID1,ID2 usw. If you have a 'hole' in your SCSI-Line
like: ID0,...ID2, AHDI can't found the active ZIP after that 'hole'

Use HDDriver7 for a nice ZIP access, includes all special ZIP features.
Like Passwort, Eject and also..

Watch out:

If you have an older ST with a DMAtoSCSI Adaptor, this adaptor MUST
support TermPwr (SCSI Pin 38) AND PARITY. If not, you can't have
any access to your ZIP Device. Add a Adapter how was support PARITY.

That's not impossible if you use any TT, Falcon or Mac with a SCSI Port.
OK, i hope that helps :-)

Regards, Robert

Why don't you try CBHD 5.02 ? it is free and works very well under Magic (do an upgrade to v5.13). If you add SPIN034 you will be able to drive a CD-ROM reader (understands ATARI, Audio and Mac CDs)
I don't have the web sites addresses in mind but should be easy to find with Altavista.

2841. Mega STE-Magic 5.11-ICD Driver

Newsgroup: comp.sys.atari.st
Date: 1997-11-23 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <65a7dgmhh1@irk.zetnet.co.uk>
Source record: 113236

I have been trying to load Magic on my Mega STE TOS 2.06 with ICD
driver v6.2.3. Each time I try to boot up I get the following dialogue :-

Fatal Error In Gemdos With 2 or 3 bombs
System Shutdown

This only happens with a Hi Res monitor, there are no problems
using Med Res.

I have been advised to try the AHDI Atari Driver which I have,
and if this works consider using HD-Driver which will allow
multitasking DMA. I don't understand the last bit, could someone
please explain?

I have not tried another driver as I am not sure whether it is
possible to use a different one to the one that formatted and partitioned
the drive originally, without causing more problems.

Assuming it is possible to use different drivers without problems,
is the HD-Driver a good one to use? I see it is mentioned quite a lot in
news items. Any advice on this and where to obtain it would be appreciated.

I also have a Gasteiner driver which I am using at this moment with
an STFM/Magic/Hi Res at the moment. This seems to run quite happily, would
this driver be suitable for the Mega STE

If there are any other Mega STE/Magic/ICD users who have been able
to overcome this problem I would be pleased to hear from you.

Thanks
Mike

Put this in MINT.CNF. Change it to your need ofcourse.

shell c:\thing\thing\thing.app

You also have to put an environment variable for the desktop

setenv THINGDIR c:\thing\thing

Yes, I see that now, Theo, but the Atari A-Z actually said:

"SHELL=<path> Launch an alternative desktop or CLI shell."

"Launch" is quite wrong.

:-)) Mmm, yep. I've been playing with 1.12.5 and 1.14 today!

>No, it's definelately 'GEM=', I tried it myself just to be sure.

Aha, how true! Yes, this command works fine on 1.12 and 1.14. Perhaps
someone will tell us how GEM= is different from INIT=.

I'm trying to build something stable from MiNT 1.12/1.14, NVDI v4,
XaAES 0.6/0.7, Thing 1.09/1.20. A lot of combinations. I can now load
them up OK but none of the combinations lasts for very long! Usually
MiNT collapsing with a store violation or XaAES .7 having an error in
'emulate_rectangle' when doing Thing 1.2 dialogues. Still, early days
yet.

Anyway, Jo, do you have any advice on stable MiNT versions? There are
so many available (my 1.2 is 1.2h2 beta). If I'm playing with so much
fragile software it would be nice to know that the kernel was firm.

Blame microsoft. I had to spend ages manually recreating much of the
FAT and directory structure on an 8086 with a 10Mb hd many moons ago.

This sounds like the pink panther syndrome - for want of a better way
to describe it. What happens, is a folder entry points to itself,
directly or indirectly, instead of to a real subdirectory - just like
when the pink panther vacuums up his own tail and vanishes! ;-)

>Just weird...$E5 did delete the sucker in
>the Root Sector and that was that :) This was NOT a hex dump of the file,
>but found using a Sector Search.

$E5 can work pretty well with this problem.

2852. Mega STE-Magic 5.11-ICD driver

Newsgroup: comp.sys.atari.st
Date: 1997-11-24 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <65d1h8$pt0$1@irk.zetnet.co.uk>
Source record: 113097

Further to my appeal for help in running Magic with a Mega STE and ICD 6.2.3 driver, for some unexplicable reason the news items I downloaded from 123779/123362, 82 items all came through with zero bytes, and this was just after I posted my query. No. 123362 came complete. So it would appear that having blanked out just when I needed it, the system is working again.

I've only been on line for a month, and struggling a bit. When I posted the query, I didn't think it had gone, typed another one out and sent it, then I think in the end both of them went.

So I didn't get a copy of what I'd sent (presumably you do) and if there were replies then I don't suppose I'll ever know. Thanks anyway to anyone that may have replied.

Its not all doom and gloom. Two guy's kindly sent me personal emails, and I'll pass the info on as it could be useful to others.

Magic is not compatible with ICD drivers prior to v7.0. This version and HD-Driver have both been recommended. Also it is possible to use different drivers to the one that originally formatted the drive.

Regards to all
Mike

> Thanks!

You're talking about ST Xformer 2.5 which will let you run 8-bit programs
and use a special cable to hook your 8-bit drive to the printer port.

Now when I say "runs" programs, they just don't run very well as the
emulation on the ST is very poor. So it's only good for running slower
BASIC programs(but not games) and transfering files.

But since you have a PC, then you might prefer PC Xformer which not only
lets you use the cable but have instructions to build one for free(aside
from parts).

If you wanted "good" 8-bit emulation on a PC, then you'll have to use the
other emulators that you can get for free like XLit and Pokey. And they
can run games much better than any form of Xformer. Hope this helps...

BTW: You can get further help from comp.sys.atari.8bit

I keep wondering why you and so many others are almost fanatic about BSD sockets.
Not even in the Unix world they are "the" standard. There are two mainstream
flavours of Unix, and only BSD has the sockets API, while System V uses the
Streams I/O concept by default. Looking at it, I'd say the STiK / STinG API is
somewhat closer to the Streams I/O concept. So the more natural way to go would
be making STinG compatible with System V, and adopt Streams I/O, instead of
BSD sockets (neither of which I intent to do).

The only explanation I can find is that MiNTnet is a BSD port.

>> Both are difficult to do right now because of the lacking features I mentioned

>
> As you program STiNG, can't you do it as you want? STiK hasn't got it so it
> doesn't realy matter how it's done as STiK hasn't got it anyway.

I could but I do not want to. Being a single person, I'd probably miss important
points to be aware of. Having realized a mistake later, it's often very difficult
to correct it afterwards, so it's better to get it right straight away, and for
that I need input by other people. Also, my goal is getting people to write many
nice clients for many network services, and this is better achieved by discussing
the API instead of designing it alone, "in the ivory tower" as we use to say in
german.

Only for minor stuff, like small tools. Any more complex application requires
a decent GUI to by accepted by GEM users. GEM users won't like a console based
news reader like tin, which - although very good - is not compliant with GEM
look and feel.

Ok, so you should calm down the last bit too, and realize that guy did not
even claim to have kept the Atari platform alive. What he said was that he
did not let it die, and realizing that something is not dead until the very
last person dropped support, you'll see that the phrase probably was merely
misunderstood by you. Platforms are different from man, who can only be dead
or alive, computer platforms can be neither ;-)

> must never be hacked into a name.

It's sad that this is the case, because it resembles one of the many bugs
in TOS. TOS should certainly check for this case. It's safe to do this
and many similar things in MagiC for instance.

> Entry[0] is a pointer to itself and
> entry[1] is a pointer to the parent folder. The two have a direct
> correspondence to command shell operations such as "move .*.txt .."

But that's merely a relict of Unix where these entries are real files.
Under TOS, there is no real connection, as - unlike Unix - constructs like
C:\SOME\OTHER\..\THING cannot be passed to the OS, but must be parsed by
the shell.

> Armed with this, it is worth hacking in a unique name, rebooting, then
> dragging it to the trash.

Certainly the best way of doing it.

> If tos doesn't complain then all is well -
> if it does, hack in the $E5.
>
> As none of us are privy to the intricate details of how tos works it

It is the same effect as if $e5 were used. The result is the same too -
floating clusters. They can be removed however using an appropriate tool
like SED.

>>So a word to the wise. If you download a binary file from Usenet or elsewhere

> reboot.

I've never had such problem *extracting* files. I do this under MagiC though,
and this confirms my suspicion that these problems result from the extractor
hitting TOS bugs.

a believer aren't you ? ;-)

> I found the offending folder was "0". When I clicked on it, it had recreated
> itself. When I continued opening the folders it went at least 40+ deep.
> All empty and all undeletable.

Probably pointing to itself, thus forming a "loop" inside the directory tree.
Normally TOS does not allow to go any deeper than 8 folders. Of course TOS
cannot deal with such a loop. However, such a loop cannot be created by any
application unless it deliberately does various low level calls, which cannot
happen by coincidence. So definitely some TOS or MultiTOS bug is responsible
here. Experience let's one point to MultiTOS (even though it's not directly
concerned with disk I/O).

I get the impression that ISP gurus are born fiddlers. I keep
observing odd liitle changes in the way my net access behaves. Until
a week ago STinG (with uncompressed Slip) was nearly but not quite as
good as STiK. Suddenly, with no change on my part, STinG goes like a
rocket - it works perfectly. With STinG PPP and the same ISP I have
had no success. I can establish a connection and can an IP, but
nothing more. And what is most odd is that data is obviously coming
in. E.g. if I ping the name server, the receive led flashes madly and
the count in Statistics in the Dialler mount impressively for Ser.
2/Lan, but not a sausage appears in the statistics for the Internal
port. Where are all those bytes going>

2868. A few (annoying?) ST questions...

Newsgroup: comp.sys.atari.st
Date: 1997-11-24 00:00:00 UTC
From: "C. Wall" <vergil@media-net.net>
Message-ID: <347A688C.9643F6AA@media-net.net>
Source record: 113113

Greetings all,

First, my apologies if this is a RTFM type set of questions - I'm one of those poor ST owners who got the system with no docs, and I can't seem to find the answers on any web pages... so here goes.

I have an Atari 1040ST (little "F" next to the 1040 on the molding) - I'm assuming it's one of the earlier models because it is SIMM free and comes with TOS 1.0. Currently, using the control panel accessories that come on the language disk, I can set the serial port speed to a rockin' 9600 baud. This might be cool for using it as a dumb terminal, but I'm currently using ghostlnk to hook to my linux system, running DOSEMU (and STonX when I get sick of waiting for stuff to transfer over the null modem at 9600).

Anyhow, I digress - I've been told by another Atari ST user that the 9600 baud limit may just be a TOS limitation, but I thought I'd verify here. If it is a TOS limitation, are there utilities that I can load that will bypass the driver in TOS so I don't have to track down chips? I'm aware of a hardware hack that will knock me up to 38400, but I wanted to wait a while on that. If I do have to upgrade TOS, is it possible to get a disk bootable version? If that's not possible, where would I get the ROM's and what is the highest version I would want to try and run on it? Etc etc...

Now that I've annoyed 1/2 the newsgroup and given myself carpal tunnel, I think I'll go - thanks to you all in advance for your help.

Christopher Wall

m> KnowHow. Have you ever run across an English version?

I translated the KNOWHOW.ACC text files for the then UK distributor, CGS, to cover DA Vektor V1.10 and also made some corrections for the PRO V2.0 version. So these should be available from the official distributor. If they don't have it and you can get their agreement, I could email this to you if you let me know what you want. Alternatively (though I don't know the copyright position on this) I have the translated Knowhow and Tutorial available as First Word Plus text files. Email me or write: Peter West, 38 Woodfield Avenue, London W5 1PA, UK.

Regards
/Peter/

You'll need HSModem for MagiC too, it was supposed to have been built-in but
that never happened.

>Any help please!!!!

Is GEM the only vector format you can save in right now? If you can save CVG 1.0, try Hakon Eines' shareware EPSXCVG and have Illustrator or Freehand import the resulting EPS. EPSXCVG sometimes works just as good as DMC's commercial CVG to EPS converter. In one particular case, EPSXCVG worked better on an Illustrator file than DMC's. Depending on the nature of your vectors, some manual object layering may need to be done, though (no big deal).

Getting a GEM metafile to bit-image format shouldn't be too hard. Meta-Bit will do that although I've never tried it (I use Cranach, which allows bit-image conversions of both CVG and GEM).

GEM metafile is compatible with the PC (at least those from the autotracer Avant Vektor). I stay away from GEM metafiles, though. There are better formats for crossing platforms.

Doesn't DA Vektor support quite a few vector formats? An early release of the program -- which I've tried -- did support both GEM and CVG 1.0. Support for CVG 1.1 (color) was supposed to be forthcoming at that time. Maybe it even has EPS/AI support now?

The problem I'm having here is that all the ISPs in my area are PPP only. I've tried just about every Atari Internet software package and have only been able to get Oasis 1.35e working. Which doesn't really do Web stuff. Now I have FalconSpeed in my Falcon and have found a Dos Web Browser called Net-Tamer which is a PPP Web Browser, that also does E-mail, FTP, Telnet and etc. The XT version is Text only when doing Web stuff. But it's quite fast. And very easy to get working. Just enter your Internet info and away it goes. I would also think this program would work on the ST, STE, and etc. that has at least a 286 PC emulator installed. The reason I mention this program is that it might help someone out there get Web access on their Atari that otherwise would not be able to. And also, maybe some of the programmers that are working on a PPP Web Browser for the Ataris might want to look at this program. As its the only PPP Browser thats easy to setup and actually works on my Falcon with a PPP only ISP. However I would rather use Atari software on the Net/Web, but at least its running on an Atari! <Grin>

Message-ID: <65am2m$l6i@alexander.INS.CWRU.Edu>
Source record: 113156

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Syquest 5 1/4" 44 meg removeable cartridges. Will be HDX formated and
verified good. each $20.00

Mouse Master by Practical Solutions. Plugs into ST mouse port and
allows you to have mouse and 2 joysticks plugged into the computer
at the same time. No more reaching under the machine to plug and
unplug the mouse to play a game. Comes in original box $10.00

Monitor Master by Practical Solutions. Allows you to have an Atari
mono and color monitor hooked up the the ST at the same time. Just
press the button, no more unplugging and plugging in different monitors.
Switchbox also has Audio and Video ports on it. $10.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $65.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $65.00

Supra 2400 baud external modem. No power supply. $3.00

Fast Fax by Michtron. This is the original fax hardware/software
for the Atari computers. Works with ST 520 to Falcon. This is a
special Michtron 9600 Send/Receive Fax Modem with software. The
software is very efficient, powerfull, and simple. Send, receive,
view, log, and print, faxes. has drivers for popular printers and the
SLM804/SLM605. Use a spare 520 or 1040 as a stand alone fax machine.
Comes with special fax modem, diskettes, and manual. $40.00

SuperCharger by Beta Systems. This was one of the better IBM
emulators for the ST. Best part was this was an external unit
that plugged into the ST's DMA port and had it's own power supply
so as not to put any stress on the ST. This is an XT emulator
that is twice as fast as a regular IBM. The external box CPU is

housed in a beige case with a data and power lights, also has a
reset button on the case. The case has a DMA passthru port to
allow connection of other devices. Comes with all diskettes,
MS-DOS 4.01, a copy of the instruction manual, power supply
and DMA cable. You can have IBM and ST partitions on your hard
drive and hot key between DOS and TOS. When the IBM emulator
is not in use the 1 Meg RAM in the CPU case can be used for a
fast RAM drive under TOS. $60.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

MagiC 4 by ASH. This is a premptive multitasking system for the
Atari computer. Works on all Atari computers, ST..TT..Falcon.
This is a complete rewrite of TOS. Many limitations are now
gone and the best part your computer runs faster. The software
can also be used for Gemulator without the ROM card version.
Will work with as little as 1 Meg RAM but 2 Meg or more is better.
Comes wih diskettes and manuals. $30.00

Moving Pixels CD-ROM. This CD-ROM has Tony Barker's programs
and source code from all the programs he ever wrote for the Atari.
Includes programs like Atax, Brushworks TT, MIDI Battle, Offical (The
official Falcon Demo used by Atari), Tina (The 70 meg Tina Turner TV
comercial), TT Wars (The Star Wars Demo) $10.00

ST Control by Trio Engineering. A BASIC like language that
is closer to using normal language to program. Example
"Draw picture with Neochrome" Includes box and diskette
no manual. $5.00

PC Ditto by Avant-Garde Systems. This is the original IBM Emulator
for the Atari ST. It's purely software based and surprisingly
is very compatible with an IBM PC. This is the newest/last version

of the software that supports Atari mono and color monitors. you
can create an IBM partition on your Atari hard drive and install
MS-DOS and IBM programs to run from the hard drive. Comes with
diskette, manual, and keyboard template. $10.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $3.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

But when things do work, Hallvard, they work very well. Many of the
'problem' posts are from people who already have their Atari clients
running great on the 'net (me for one). But STiK users (and others) want
to be STinG users, or at least try something new. Others can't find a
provider with uncompressed SLIP, or simply haven't tried hard enough to
find one.

I understand your frustration, though.

This is slightly off-topic, sorry. A few months ago, someone posted a message stating that they were looking for an original Pong machine. I've checked Deja News, but I can't seem to locate the post to reply directly via email....

Anyway, a local Synagog had a rummage sale downtown last week, and as I was "rummaging" I came across an Atari Super Pong (Kind of weird seeing an Atari product without a Fuji symbol) - not quite the original Pong, but pretty darn close. I have no interest in it and only purchased it on the off chance that the original poster might still be interested in acquiring one. If you are, please let me know.

> SCSI is more advanced than the TT.

For the Empire you need a LINK96/97 host adapter in order to use this
drive with an ST/STE. Other host adapters don't work because the
LINK96/97 is the only one that supports initiator identification, i. e.
this host adapter give the ST/STE its own SCSI ID. Quantum Fireball and
some Quantum Empire drives require this.
On TT and Falcon some hard disk drivers provide initiator identification
by software. This is not possible on the ST/STE where you can get
initiator identification only by hardware.

This is wrong. Formatting is always platform independent. The computer sends the FORMAT command to the drive and the drive does the rest. What is platform dependent are the file systems, i. e. what you get after partitioning the drive.

> TOS/Geneva or MagiC 5 to be able to read/write to those disks without
> having to reformat. The problem is non-compatibility between the PC
> and Atari implimentation of partitions larger than 32K in size.
> BIGDOS/HardDriver 6 or above, MagiC 5/HardDriver 6 overcome this

> limited to 32K partitions for cross platform readability.

This is no longer true. With the new version HDDRIVER 7.1 media with a single partition that is DOS _and_ TOS compatible at the same time can be created. Under TOS this partition can be accessed without any additional tools. And the best; KOBOLD doesn't have to switch to GEMDOS mode to read/write this DOS compatible partition.

The special kind of DMA data transfer supported by MagiC and HDDRIVER
means that you can still work during hard disk transfers, i. e. the
Atari won't block during the transfer as with AHDI.

> Is it possible to run a different driver to the one that
> formatted and partitioned the drive originally, without causing further
> problems?

Basically this is possible. If your drive was partitioned by the ICD
software, however, it might be incompatible to the standard Atari
partitioning layout if your drive has more than 4 partitions. With 4 or
less partitions it's no problem at all to use another driver: Simply
install the driver of your choice.
BTW, a demo version of HDDRIVER (new version 7.1) is available on
http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html.

Of course HDDRIVER doesn't support CDROMs. No hard disk driver does
because for CDROMs you need special CDROM software. HDDRIVER, however,
comes with a builtin generic SCSI interface that enables other,
light-weight drivers like the SPIN! CDROM driver to access CDROMs and
any other SCSI device using the HDDRIVER SCSI routines.

Ehhh That's definately not true! Of course you can use a MFM drive
on a ST if you got a controller for it!

The Megafile 20 and 30 have mfm controllers and have also a extra
slot for an additional drive.

Ah. The MiNT I'm using (0.95) does not understand GEM=. I have looked
through the MiNT binary and can't find such a string.

But ... in MiNT v1.12 there IS a string AESSYS. Perhaps I should change
my MiNT version and try "AESSYS=<aes>".

>IIRC it's 'shell <path>' (a command) and not 'SHELL=' (a variable).

Magical! Thanks, Jo, this worked fine! I have very little AES
documentation but got the "SHELL=" info. (wrong!!) from Atari A-Z.

Thanks for replying, Martin, but are you SURE about this :-)

MiNT does not respond to "shell" but AES does! So I've put a similar
line into GEM.CNF and everything is OK now.

I was misled by the reference in Atari A-Z which said that the syntax
was "SHELL=<path>" (wrong!!!!).

>You also have to put an environment variable for the desktop
>
>setenv THINGDIR c:\thing\thing

Yes. Thing 1.09 managed to find it's RSC without this setenv but v1.20
definitely needed it.

>Proxies are needed with CAB so that you can browse http 1.1 protocol web
>sites (CAB and CAB.OVL are not http 1.1 compliant yet).

Sorry to nitpick ... HTTP stands for Hyper Text Transfer Protocol. I.e., it is the network communication protocol. CAB has no network knowledge at all. Thus, it is neither compliant nor non-compliant with any particular version of HTTP. HTTP is solely the responsibility of the OVL.

Also, the CAB for MiNTnet overlay that I have been working on *is* HTTP/1.1 compliant. It currently does not support all of the options & extensions of 1.1, so I have released it with a 1.0 tag. However, other people have edited the tag to say 1.1, recompiled, and used it successfully. There is no real problem with doing this, you just don't get all of the speedups that 1.1 has to offer.

In the meantime ... I'm working from behind a firewall that only provides a 1.0 proxy, so I can't test the rest of the enhancements that I've written. Quite a hassle.

2902. ST vs. Mac Art/Design Project - Help!!!

Newsgroup: comp.sys.atari.st
Date: 1997-11-24 00:00:00 UTC
From: Stephen Beat <beaty@globalnet.co.uk>
Message-ID: <01bcf8b7$c688f7e0$4a557ec2@beaty>
Source record: 113177

Hi...

There are those of you that may have been following my quest to do proffesional graphic design on the Atari ST...For those of you who haven't, hears the gen!

I am a professional graphic designer, based in the UK, and back in early 1990s I was actually using a 4 meg STE (with hi-res monitor, hard drive, Calamus & DA Vector) to produce my work for a typesetting company. I used the ST very successfully, and despite the rest of the industry paying homage to Apple Macs, I did lots of illustrations and drawing for books by some of the major London publishing houses.

Nowever, in 1993 I returned to university to brush up my design skills, and I am afraid to say that I bowed to the inevitable and purchased a Macintosh to replace my trusty ST! :-(But....The first few design projects I did for my degree WERE done on the good ol' ST! :-)

Now I am coming to the end of my Hon. Degree, and despite a further change, to a Pentium, I now feel that, more than ever, I could have done ALL my work on a ST and suffered no ill-effects with my marks!...

In other words, I think my ST could have done, practically, all the kind of design and illustration jobs I've been doing all this time on Macs and PCs!!!

....HOWEVER, as you can imagine, my course tutors and friends scoff a little when I say this - So I came up with the idea that (just to prove them wrong) I would produce one of my major presentation pieces for my degree finals on a Atari ST...Just like I use to!

Sound crazy?

My main problem is that I now must assemble all the bits of ST hardware and software by Christmas to have any hope of getting a good start on the project (I went and sold my original set up to pay for my Mac!)....

I am pretty confident that I can get a 4 meg Mega ST, or Falcon or even a TT and hard drive OK (but any offers of purchase or loan would be helpful)...BUT...The software is different - Getting hold of the design software was hard at the time, now it seems neigh on impossible!

I need a late version DA Vector; Calamus, DA's 'Picture' (I think it was called) AND fonts and tons of little conversion utilities that convert ST vector files to PC/MAC ones so I can get my stuff printed off at a print shop...

I know all this seems a bit mad and far fetched but I would love to end my degree the way I started it - and prove how good the ST really is into the bargin - and get this project completed in time...

Any help (even if it's just a 'good luck, your mad!') would be appreciated!!!

Cheers for everyones help, advice and support so far!

Beaty

Hi Tony

In article <347ab495.1816206@news.prestel.co.uk>, st@st.spam says...
> >It is new compared to the other Oldies. :)
> Like I am young compared to the pensioners at the end of our
> street...;-)

Well, yeah, you can see it that way. ;))

> No.. and please dont twist my words by asking a question as if

Sorry ony - I did fly off the handle there a bit... it was uncalled for. I just saw your posting as telling Ian off - and my face all turned red...

> Ians "we are the saviours" attitutude, how a group decided to keep the
> platform alive.. thats whats bollox,

However, I would agree with that attitude, to a point... I do honestly think that the Atari market in the UK would have declined much faster if it wasn't for AC in the UK.

I am in no way putting down any of the excellent work done by the various BBSs, user groups and disk magazines. The Atari is very much an enthusiasts machine, and kept alive by enthusiasts. That said, without a printed publication, the amount of enthusiasts and no matter how much energy they put in, could not save the Atari market. I hope you can see where I am coming from... platforms are still judged by publication status.

> what do you think every ATARI BBS Sysop is doing, or every ATARI
> programmer is doing.. or every ATARI diskmag or every ATARI pd

We recognise this fact - why do you think we dedicate space in the mag for news and announcements from them - they are helping keep the Atari market alive, no doubt...

> are helping me certainly..... but it wasnt there decision to keep the
> atari platform going was it?
No, it wasn't their decision - certainly part of it, you must agree. :)

> > the platform alive - it was pretty much dead in the UK anyway and we
> what ?... can I quote you on that ?.. your telling me the atari scene
> in the UK was pretty much dead?.. get real :(((
Compared to the German scene, yes.

Tony, I apologise for jumping down your throat like I did, but AC is very close to my heart... still, I thinnk we both agree on various matters,

just in different ways. :)

Regards
Danny

Actually, this _is_ correct; it doesn't start up a desktop, but rather gives the path of the default command line shell (e.g. sh, bash, tcsh, etc.) Yes, it's confusing; I personally prefer the terminology "desktop" for any sort of graphical file management system, and "shell" for a command line shell.

What version? Cubase 2.0 (the version I have) reqires 1meg, but with some options deactivated (score editing, M.ROS multitasking, mixermap modules...). It's fully operational in 2megs.

Mono is mandatory for 99.99% of music software.

Hi, about 6 months ago my old 1040 STE suddenly completely stopped working, I think it is probably the power supply, and I am now considering trying to get it sorted out. I was wandering if anyone can advise me on whether it would be cheaper to get it profesionally fixed or to try to buy a second hand STE (and if so how much I should expect to pay).

This is not urgent as I mostly use it for messing about with my old games, but I do miss having it around, so any response would be gratefully recieved.

Thanks in advance

Tom Hayward

P.S. I live in the UK if anyone is selling one.

Hey I aint got my zimmer frame yet ?:)

>> are helping me certainly..... but it wasnt there decision to keep the
>> atari platform going was it?

>No, it wasn't their decision - certainly part of it, you must agree. :)

I do.. I most certainly do..in fact I would go furthur than you Danny and say a very BIG part of it....But they are not the saviours, it was NOT there decision to save the ATARI scene, they did NOT decide to keep it going.. we ALL did... that was my one and ONLY point :)..

I only have a few good reasons for making free software, The possibility of getting software reviewed in a printed magazine has always been high up there, and still is.. without AC it would take away a big incentive to spend the amount of time and effort trying to produce something reviewable :), Hence my comments that they are helping me, I am thankfull AC exists and hope they do for many years to come.. I want my software reviewed every year hehehehe,

>Tony, I apologise for jumping down your throat like I did, but AC is very
>close to my heart... still, I thinnk we both agree on various matters,
>just in different ways. :)

We both agree AC Have helped the ATARI scene, we both Agree that if it wasnt for them then the ATARI scene would be a hell of a lot smaller and we both agree that a lot of companies wouldn't bother supporting the ATARI if they had nowhere left to advertise, and we both agree that AC is helping us personaly in different ways....

Unfortunatly I don't like there "We rule ATARI" attitude.... and if I have to read once more that they do it for free I am going to get a gun and shoot someone<g>... EVERYONE is working to help the community for free.. But only AC moan about it :(Our efforts may not compare with a printed magazine.. But a lot of work goes into a lot of ATARI things, a lot of time, worries, money and effort, a very lot.. but no one else cries about it when they are criticised.. we sort it out.. not roll out the same old boring excuse about how they are doing it

for free.. and how we should all be thankfull.. that quite frankly is very lame,
I dont dispute they do it for free.. but get real. we all do..they should stop whinging and using it as an excuse everytime someone makes a comment they dont like ?

Danny.. I wouldnt expect anything less than a roasting from a bleeding cockney hehehehehe.......

track01.dat, I assume. If that doesn't go away after a forced media change
(forcemed.app...), then SPIN! is unable to mount that as ISO or HFS
disk. I can't change that without more data... If you know how to do that,
please send a copy of the first ~100 sectors of that disk to
reschke@muenster.de (just copy the head of track01.dat...). Otherwise
I'll probably need the CD itself to investigate it...

The original INIT= method did not use the exec_os variable to launch the
AES, so the GEM= command was added to increase compatibility with some
TSRs that depended on exec_os being used as a signal that the AES was
about to be started up.

Well, I got my Falcon back from Alex Yu at ATY Computers, and I'm impressed. Nemesis does just what it says it will, and is very compatible. In fact, I read a couple of postings about problems with some Eurodemos like "The Lost Blubb"... It works fine on my Falcon with Nemesis turned off. I'm going to have to swap out my memory card (because of the 30-pin SIMMs) and ICD's Pro Utils. (for HDDriver) but other than that, its great. So, who wants to buy a 14-meg Falcon Ram card? Make me an offer! :)

>The only explanation I can find is that MiNTnet is a BSD port.

Streams is a clear example of what happens when a computer scientist designs
something, in total absence of reality, as opposed to a computer engineer...
The conceptual model is easy to understand but anything implemented to that
model is a performance loser. Yeah, the Unix world is slightly divided. But
sockets have been around longer than SysV STREAMS, and the original ARPAnet
research was done on BSD machines using sockets. As such, there's a whole lot
more mindshare there, more software, more comprehensive support. Also, even
in SysVRelease4, there is a socket compatibility library provided, and nearly
all of the IP-based networking software still uses the socket interface rather
than directly using STREAMS TLI.

Oh, here's a note - you're in an Atari newsgroup. Is it any wonder that you
see "almost fanatic" postings here? }-)

I have to admit, having programmed with sockets for a dozen years or so, and
STREAMS for the past five years, there are some ideas I like in STREAMS. The
concept of being able to push drivers and modules on top of each other is a
cool one. In practice, you don't get a lot of use out of this feature, because
there aren't a lot of standard modules or standard protocols between them.
Also, you get a lot more speed by implementing a multi-layer protocol stack
in a single module, rather than by using one module per layer. But doing it
the split way gives you flexibility and easy extensibility. Tradeoffs...

Ah, final note - yeah, MiNTnet is a BSD port. I suppose it could have been
done as a STREAMS-based port instead. But that would only have created extra
work, since you'd still need to implement a socket-emulation library on top
of the STREAMS interface before you could get any useful code running. MiNT

is a BSD-influenced kernel. It all follows...

Will this be a Stik/Sting based ICQ client? I've used ICQ on a PC and it is a nice suite of program (the interface could use just a bit of work). I will definitely be sending them an e-mail.

Since what ICQ wants most right now is to be the most subscribed of the "Buddy" services, it would be in their interest to add as many subscribers as possible. And if it isn't going to cost them anything to port the software, they ought to leap at this opportunity.

Hi Chris.

I think they (TOAD) are reliable, I got my Falcon from them... but
they are not too much in the atari market now. I recommend you to write or
call to current atari dealers like Sysyems for Tomorrow, Chromagic or
Computer Direct (in Canada). I'm sure you will get wat you want from
anyone of them, and they are absolutely reliable.

Regards.

Daniel.

Just in case anybody is interested.This is an e.mail and the reply
that I got from Alexander Claus.

QUESTION:-
> I was wondering if you could tell me if it will be possible to use
> JAVA on an atari ste with cab 2.5 at all in the future.

REPLY:-
I someone is able to port java for TOS it should be possible. But I
won't port it myself. And I fear, a normal STe will have not enough
memory to run the java VM (you'll definitely need a multitasking
system, I think) with all the needed stuff.

Hpopefully , somebody will be able to make use of the info.

Keith Lever.

The best way to deal with this would be to order COD. If your order
does not arrive when it should, blow them off and go somewhere else.
Maybe try Systems for Tomorrow at www.systemsfortomorrow.com, or Alex
at ATY Computer, or B&C Computer Visions. Someone else will have to
supply the latter twos email or web site address.
Personally I wouldn't order dog shit from Toad. They still have my
NVDI for MagiC Mac disk I returned for an upgrade one year and one
month ago. They refuse to refund my fees and return my disk. For
thirteen months I have been told by the staff and owners that it will
be here at the end of the month.....Make your decission.

Mike

2937. Internet complete!

Newsgroup: comp.sys.atari.st
Date: 1997-11-25 00:00:00 UTC
From: RAUKAMP@dame.de
Message-ID: <24443629.4241.0d86@raukamp.dame.de>
Source record: 113062

Hi all,

ASH is completing it's internet-package with the new CAB 2.6, which
now includes "Fiffi", a FTP-program.
Also new is the "ASH-Emailer", which is of course a software for e-mails and
for newsgroups. All of the programs are available in Germany next week.

>from my Web Page. I don't need to hear the audio in real time, just to
>encode the files and make them available to others.
>Is there any software available for this purpose ?
>Thanks,

I think someone was working on a "player" but AFA a encoder, Real Audio is
a commercial product. So someone would have to pay $$ for the code.

Regards,

Rich

it shold just load from what's in your NVRAM setting.
Set it to 80 col, VGA 2 col with a software like bootconf.

>
>2) Where did half the manpages go ? Typing man gcc and getting "no entry for
>gcc" is not a good sign.
Well gcc man is not there, if youhad to install ALLLL the manual, I
think you would need a second harddrive ;)
No, just kiddin', try man man
or man rm

>4) Why does alt+F10 to access the console cause a nasty crash ? I try to
>select ST-Hi res from STooP, but it doesn't seem to help. (MINT030.PRG too...)
not from the boot selector, but from the NVRAM settings. (see bootconf)

>5) Is Xaaes reasonably stable ? Worth a go ? I know development has slowed
>to a crawl. If I get an AES at least I could play with GluSTiK... Is Naes
>worth the candle ?
Xaaes, sorry to say that hmm very interesting, but as a beta, not as a
DAILY use AES.
Naes is the way to go, (commercial), or multitos will do it fine,
except that it will be much slower, and hmm a little less stable.(that
naes)
Regarding X11, well, it's only in monochrome, pretty slow, and not a
whole lot of client. So it's nice to have x11 for testing, and
learning. but well..

>
>6) What does the UUCP package do ? Worth the 'phone bill ?
UUCP is unix to unix copy protocol or something close to that, it's
basically one way (very reliable) to get your email.
You don't NEEEEED UUCP.

>2) Where did half the manpages go ? Typing man gcc and getting "no entry for
>gcc" is not a good sign.

Th gcc manual is in info format. Just type info, hit enter and choose the
file you want view.

>3) I still can't get X11 to work. Until I progress further with KEMD, I reckon
>the TAF distribution is the best way to get X11. (But I still couldn't run

>get a "give up, file not found" type of message. Why ? More bits missing from
>the PATH variable ?

Never tried X11 with kgmd. Only have a 4 meg MegaSTE.

>4) Why does alt+F10 to access the console cause a nasty crash ? I try to
>select ST-Hi res from STooP, but it doesn't seem to help. (MINT030.PRG too...)

The alt+F10 combo is to bring you back to GEM. If GEM hasn't been started
that's probably why it bombs.

If you want to boot kgmd with GEM just edit the /etc/ttytab file. The lines
to edit are:

#console "/usr/etc/getty console" st52 on secure
console "/usr/etc/execgem" st52 on secure

The hash mark (#) is a comment. kgmd installs with the console line
uncommented and the execgem line commented. Just reverse them as above.

>5) Is Xaaes reasonably stable ? Worth a go ? I know development has slowed
>to a crawl. If I get an AES at least I could play with GluSTiK... Is Naes
>worth the candle ?

If you run GEM you can use GlueSTiK also.

>6) What does the UUCP package do ? Worth the 'phone bill ?

If your ISP supports uucp go for it. You can download your news and mail
in about a quarter of time it takes for nntp. nntp is so slow......

Maybe thats why so many ISP's don't support it. nntp keeps you on the line
that much longer. I sure wish my is supported it. It took me 18 minutes
to download 78 articles tonite :(

I think XaAES is your problem. I have very little problems with MiNT 1.14b5,
NVDI 4.11 and Thing. I use TOSWIN instead of TOS2GEM for running tos programs.
TOS2GEM seems to cause a lot of memory fragmentation on my machine.

I even run Geneva/MiNT from time to time. It's getting fairly stable. There
are still a few problems though.

>Anyway, Jo, do you have any advice on stable MiNT versions? There are
>so many available (my 1.2 is 1.2h2 beta). If I'm playing with so much
>fragile software it would be nice to know that the kernel was firm.

Use 1.12.6 or above.

Yes thats a problem with some providers.

I heard nothing about this problems from Peter although i send him password
and Username of a testaccount in which he can find the problem.

But until now Peter dosn't response.

I hope she is searching the bug, because i hade to change my provider, to
login with PPP and STinG

2945. Fun with KEMD...

Newsgroup: comp.sys.atari.st
Date: 1997-11-25 00:00:00 UTC
From: augeas@elis.demon.co.uk
Message-ID: <51711010_000034_OASIS_NEWS@elis.demon.co.uk>
Source record: 113121
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Well, I finally downloaded large swathes of KEMD, and it claimed
to have installed okay. Some questions: (I'm using a Mark X with VGA)

1) Why does it boot up in such an ugly font ? I have to do alt+F1
and use a virtual console before things start to look respectable.

2) Where did half the manpages go ? Typing man gcc and getting "no entry for
gcc" is not a good sign.

3) I still can't get X11 to work. Until I progress further with KEMD, I reckon
the TAF distribution is the best way to get X11. (But I still couldn't run
gcc...) I added some lines to mint.cnf from TAF (The ones that exec kbd and
pty) and managed to get scancode in u:\dev. Typing startx or xinit, I just
get a "give up, file not found" type of message. Why ? More bits missing from
the PATH variable ?

4) Why does alt+F10 to access the console cause a nasty crash ? I try to
select ST-Hi res from STooP, but it doesn't seem to help. (MINT030.PRG too...)

5) Is Xaaes reasonably stable ? Worth a go ? I know development has slowed
to a crawl. If I get an AES at least I could play with GluSTiK... Is Naes
worth the candle ?

6) What does the UUCP package do ? Worth the 'phone bill ?

Well, sorry to say roll on Linux....

Hi,

Atari power supplies are very simple to replace. You simply undo two srews
unplug the little white plug and lift it out. You can then simply plug in
another one.MAKE SURE POWER IS OFF OR YOU WILL GET ZAPPED !!
If you are unsure then don't do it. I replaced my STE power supply with
one from an old 1040 stfm I picked up for peanuts !!

Bill

If when you switch it on, there is absolutely nothing, no light, no screen, no noise... it is probably the power supply. These are pretty fragile little things.

Your best option is probably to get an old 520STF for the parts. These are worth next to nothing nowadays as they are hardly expandable (well, less than an STE anyway).

Hiya iwb@cix.co.uk....

i> Organization: CIX - Compulink Information eXchange
i>
i> And, just to add to what others have been saying, there is even a
i> NEW magazine - Atari Computing - available by subscription.
i>
i> When AtariWorld closed it's doors, a bunch of us on CiX decided not
i> to let the platform die and so formed the Atari Computing Group out
i> of which sprang the magazine.

Your having a laugh arn't you?....<g>

Scince when did Cix users /decide/ to keep the Atari scene alive?...

Maybe a re-wording is in order here, something along the lines of 'we decided to HELP keep the Atari scene alive' would be more appropriate, I think it's highly concieted of you to think that you *alone* saved the Atari from going under.

Without the likes of Mike Goodman, Steve Delaney, Stosser, Maggie, ST+ to name just a few the Atari scene would still be alive, only not as well supported as it is, we're a very small platform and I don't see that changing however, next time it might be a good idea to think about what your saying before you announce that it was Cix users alone that are keeping Atari afloat!.

I personally find your comment highly insulting! :(

Whilst not in the same league as AC or even Maggie I like to think that ST+ does it's bit to help out, I certainly don't like to think that we're only here because of you *ALONE*!.

Please, maybe a retraction or even an apology would be nice :)

:
: Geneva provides all this, too. Maybe not so much the GEM extras, but
: certainly multitasking and a nice speed increase. For what applications
: I run, Geneva 6 has been very stable and reliable. Having used a number
: of previous releases, it just gets better all the time.

As far as I know Geneva does not give preemptive multitasking itself.
In order to get this one has to install MiNT additionally. On a 8 MHz
ST MiNT is too slow, it consumes about 10% of all CPU time and
dramatically decreases the the speed of disk operations on (normal)
FAT volumes.
On an 8 MHz ST I never would recommend to use MiNT. But "normal",
cooperative Multitasking will run nicely and is sufficient in most
applications.

2955. ICQ on the Atari

Newsgroup: comp.sys.atari.st
Date: 1997-11-25 00:00:00 UTC
From: denesh@cyberstrider.org
Message-ID: <MPG.ee4af236bfc8f33989686@news.demon.co.uk>
Source record: 113131

Hi

I've been asked to post this, by Roy Goring

Hi All,

If you would like to see ICQ on the Atari please email

Mirabilis etam@icq.com

and tell them that you do :-)

Also tell them that

Christian Andersson faltrion@alfaskop.net

who has already contacted them, is willing to write it for them for FREE
:-)

ICQ is a PC based program for the Internet that allows you to be alerted
when other users, that you have previously set up in it, come on-line.

It then allows you to send them messages and chat in an IRC type style.

It is very useful, and it would be great if we could have an Atari
version
:-)

We have to get Mirabilis to agree, because of copywrite on the protocols.

SO MAIL THEM NOW!!!!!!!!!!!!!

Mirabilis etam@icq.com

Version 2 newer than 3 ?? Do you mean Cubase Audio ver2 vs Cubase(midi
only) ver3?

> yet.

I can almost garuantee that it's XaAES' fault :-) Ditch it, it can't be used for anything else than testing XaAES itself (and conclude that it's still a long way to go). oAESis is better, but still too buggy for everyday use. Get the Atari AES 4.1 from the KEMD-package (www.primenet.com/~kellis/), it works quite well. Or even better, buy N.AES which is extremly stable and the fastest alternative.

N.AES is available from Woller & Link (www.inx.de/w+l/). English resources can be found on my homepage (www.stud.ntnu.no/~josk/atari/).

> fragile software it would be nice to know that the kernel was firm.

1.12.6 is a very stable kernel with all the necessary features. 1.14.x should also be just as stable, unless you try to use the VM-facilities which AFAIK only works stable on TT's.

>did not let it die, and realizing that something is not dead until the very

I read it a couple of times, I just read it before this response, it
still comes accross that the people who formed AC are the ones who
decided to save us?, As always different people can read the same
thing, with different results, but i can assure you I am not alone in
reading it that way.. Its just that a lot of people decide not to
voice there opinions... me?... I see this as the place to do exactly
that :)

>>When AtariWorld closed it's doors, a bunch of us on CiX decided not to
>>let the platform die and so formed the Atari Computing Group out of

The above paragraph says they decided not to let the platform die.. I
dispute that.. they certainly helped keep it going in a big way.. and
perhaps the original poster used the wrong phrase.. but as he hasnt
bothered to say either way.. then I can only respond to what I read..I
can not read his mind.. If he comes back and says he "meant" something
else then fair enough... I commented on what he wrote and stick by my
comments.. I didnt comment on what he was thinking... If you can see
what I mean :)

>last person dropped support, you'll see that the phrase probably was merely
>misunderstood by you. Platforms are different from man, who can only be dead

This is very possible the truth.. but do I keep quite and hope I got
it wrong.. or do I say something ?.. I prefer the latter.. don't you ?

>>>picked up that lingo from Red Dwarf, Faulty Towers or MasterPiece Theater!
>>
>> Faulty towers is brill...
>
>You think so ? I'd say Cleese has done far better before.

I agree with you.. But his previous work was "Amazingly Brilliant",
and Faulty towers is just "Plain Brilliant"....thus you must agree
mine is a perfectly valid statement...hehehehe....Check!

Yes, that is one of the earlier models. TOS 1.0 is definitely not
recommended!

: Anyhow, I digress - I've been told by another Atari ST user that the
: 9600 baud limit may just be a TOS limitation, but I thought I'd verify
: here. If it is a TOS limitation, are there utilities that I can load
: that will bypass the driver in TOS so I don't have to track down chips?

That's not the case. In fact there is no 9600 baud limitation. I guess
that old control panel must not be able to set the baud rate higher than
9600, but if you get XCONTROL and the modem setup CPX you will be able to
configure the baud rate to any valid rate (up to 19200 baud).

: I'm aware of a hardware hack that will knock me up to 38400, but I
: wanted to wait a while on that. If I do have to upgrade TOS, is it
: possible to get a disk bootable version? If that's not possible, where
: would I get the ROM's and what is the highest version I would want to
: try and run on it? Etc etc...

I think there are disc based versions of TOS 1.4 around, but normally you
would get new ROMs. I think you can use TOS 1.4 easily, but I believe TOS
2.06 can only be used in such a machine with some extra hardware. You
cannot use a TOS version newer than 2.06 in the ST, and it would not make
sense to anyway since the other versions are specifically for machines
other than the ST.

Normally you should see the system font on the console.

: 2) Where did half the manpages go ? Typing man gcc and getting "no entry for
: gcc" is not a good sign.

Perhaps you didn't install the compiler package of KGMD (KEMD)?

: 3) I still can't get X11 to work. Until I progress further with KEMD, I reckon
[...]

When I installed X it worked first time with no problems. I think if you
gave more details of the problem it would help.

: 4) Why does alt+F10 to access the console cause a nasty crash ? I try to
: select ST-Hi res from STooP, but it doesn't seem to help. (MINT030.PRG too...)

Sorry, I've never seen this problem... but then I use a TT, not a Falcon.

: 5) Is Xaaes reasonably stable ? Worth a go ? I know development has slowed
: to a crawl. If I get an AES at least I could play with GluSTiK... Is Naes
: worth the candle ?

XaAES is a nice idea but development has all but stopped and, in its
present form, it's not really usable.

N.AES, on the other hand, is excellent. It's very fast, very stable and
supports all of the AES 4.1 features. Highly recommended.

: 6) What does the UUCP package do ? Worth the 'phone bill ?

UUCP stands for UNIX to UNIX copy protocol. It allows files to be
transferred between machines and programs to be executed on a remote
machine.

I use UUCP to transfer mail and usenet between my machine and my ISP's
machine. I find that it works very well for this purpose.

I can't say whether it might be worth the 'phone bill for you since I
don't know what you plan to use it for or what you would consider to be
worth the 'phone bill.

Source record: 112991

Need to get a hold off the schematics for a Thomsom version SC-1224 monitor. Garardo Moison of Chile needs to repair his that is going bad on him. As you might imagine there are not a lot of Atari dealers in Southern Chile! His only access to the net is via radio modem with (PEC6 whatever the rest of it is), so he has e-mail and ftp but not a lot else. Hallvard doesn't have the answer for this one so I'm throwing it open to the world (Atari World that is) Garardo's e-mail address is ce6coq@ce6ezg.radio.cl He can handle uuencoded files if they are not too large, or post the answer here, or send it to me and I'll see he gets it.
Sorry about the long sig, but they deserve it!! They are ruining my enjoyment of the internet!

I maybe wouldn'r *recommend* it, but I do it rather a lot myself: most of
my "online" time is spent with lynx & MiNTnet. Sometimes I even test CGIs
by running an httpd; but then I don't even run GEM, so this is strictly
nerds-only.

As for FAT partitions, who needs 'em? Apart from booting up, of course ...

> Fragen Sie nicht, was Ihr Computer fuer Sie tun kann.

I've had it running at 115200 on an FX'd Falcon running NetBSD, without apparent problems (this was using TCP/IP/PPP; I didn't try Zmodem or Kermit). The FX doesn't affect the SCC, so the hardware can certainly do it if the software can keep up. 57600 should be OK with HSmodem ...

2979. T.A.G. (repeat)

Newsgroup: comp.sys.atari.st
Date: 1997-11-26 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <880544072_OASIS_@pcc-uky.campus.mci.net>
Source record: 113005

Sorry if this is a repeat, but a fellow Atari user told me he never saw
this message appear in the Newsgroups...

I was reading through some messages in different newsgroups the other day,
and I noticed a trend with OS/2 and Amiga users:

Team Member OS/2 Warp
Member of Team Amiga

Well, I kinda like that concept and think that we should do the same
for the Atari community. My 6-year old son, Kyle, is in 1st grade and
is in the T.A.G. program (Talented and Gifted). I think this would be
great for us Atarians!

Member, Atari T.A.G. (Talented And Gifted)

We could even have a small logo: ---T---
-A-T-A-R-I-
(note its 4 lines or less!) <grin> ---G---

I think that a select group of individuals who are doing supportive
activities for the Atari community should be members. For example:

(please note that I'm only using examples-there would be many others)

Progammers/Coders: People like Douglas Little, Peter R. (STing),
Alexander Clauss, and members of the demo coding
scene...
Dealers: Floppy Shop, TUS, System Solutions, etc, etc, etc,...(and
don't forget dealers in other countries)
Publishers: Atari Computings support crew, Disk magazines, etc,..
Show Organizers: Mike Goodman comes to mind
Sysops: Anyone dedicated (read crazy!) enough to spend the time/money
on a dedicated Atari BBS deserves to be a member! :)

I'm sure there are plenty of other categories to choose from. This is
just meant to get the ball rolling. The one single theme would be any
one who is actively contributing to the Atari scene...

Okay, so who would arbitarily judge who is qualifed to be a member? Well
I was thinking that the support team (editors/writers/etc) from Atari
Computing would make a very good (and impartial) panel.

I E-mailed copies of this message to Mike Kerslake, Joe Connor, and Rich
Tietjens about a week ago, but so far, only Rich has responded. Rich offered
to setup Web space for nominating and voting on T.A.G. members.

So what's to be gained by doing this? Simple this; to encourage low profile Atari users (we know you're out there!) to get up, get out, and really start supporting our fav. platform and be rewarded with the Honor of displaying the Member, Atari T.A.G badge...

So what do you guys think? <grin>

I don't think Toad will cheat you, but Atari stuff is a sideline
for them now and they still want top dollar for everything. So, I'd check
other sources first.

** Offers from within Canada only **
Wanted (Montreal, QC):
----------------------

* SCSI-2 CD-ROM.
Panasonic or similar brand.
8x or faster.

* SCSI-2 hard-disk.
500 Mb to 1.2 Gb capacity.

* External SCSI Case.
Enough space for 2 devices (side-by-side preferred).
Maximum 4 devices high.

* ET-4000 graphics card.
Optional: ET-4000 adapter card for Atari TT030
Optional: NVDI 4.11 with ET-4000 drivers (Atari)

* Crazydots-2 graphics card.
Including drivers for a TT030.

* Cmanship Complete, by Clayton Walnum.
Book about progamming on Atari using C. Source floppies included.

Browse my Homepage for some Atari hard/software I'll no longer need,
if you're interrested in trading instead of buying/selling.

Please reply through e-mail. Thanks.

I'm afraid your 256K SIMMs are worth absolutely nothing. I couldn't even
sell them for US$10.

The 4Meg ones are useless to atari users.

> other than the ST.

Not sure, but I understand the TOS upgrade will not accelerate the
serial port. 19200 is the hardware and TOS max speed. To go faster, you
need the little hardware mod and HSModem.

TOS 2.06 in an STF is possible, the extra hardwire is just a wire or
two. There's a link to a textfile somewhere in my Quick FAQ. Or you can
add a double TOS adapter (allows you to switch back and forth between
1.0 and 2.06)

In the US you can contact B&C Computervision and many others... Check
out Hallvard's home page for a list of dealers.

Nostrodamus phrophesised this from mike.borsley@zetnet.co.uk to All...

mb> I have been trying to load Magic on my Mega STE TOS 2.06 with ICD
mb> driver v6.2.3. Each time I try to boot up I get the following dialogue
mb> :-
mb> *Fatal Error In Gemdos* With 2 or 3 bombs
mb> *System Shutdown*

Try the CBHD driver, popular wisdom says that the ICD driver has problems
with Magic, or HDDriver.

CBHD is available on the net, it should be easy to find but is in German.
HDDriver (now at V7.03 in the UK) is available in English from System
Solutions and is widely regarded as being the best driver around, it is well
supported too.

Speak to 'ya later!

I bought StraightFax 2.5 from Toad, but I must admit that it wasn't
quite good deal. Program is OK, but they sent me floppy that was junk
and I had to mail 5 letters to Toad before I get their answer. I got
that program in the end but it took 3,5 months (I live in Poland).

With best wishes,

Chris

Not dead, just dying. And by the way, I haven't observed 1500 NEW
messages in the last month, much less just 2 weeks. Sure there may be
1500 including those on archive, and most of them are from people
cannibalizing or selling off ST's, or trying to wring the last bit of
use out of them because they can't actually get them serviced outside
of begging for help on the net.

But then, maybe you were talking about 1500 8-bit game machine
messages, and well, whatever.

2995. Oregon Research Liquidation Sale

Newsgroup: comp.sys.atari.st
Date: 1997-11-26 00:00:00 UTC
From: orres@user1.teleport.com
Message-ID: <65if0sllv1@user1.teleport.com>
Source record: 113021

----- Oregon Research Atari Equipment and Inventory Liquidation ------

After 10 years of developing and supporting the Atari platform with
the highest quality software and hardware available, we are forced to
permenantly close Atari operations. This is done with a sad heart and
only because we can no longer make a living selling Atari software and
have been forced to take other jobs.

As part of the shut down we are liquidating our entire inventory of
Oregon Research and HiSoft software at cost. We are also selling all of
our Atari harware to the highest bidder. In addition, we will be offering
for sale the source code to Diamond Back 3 and Diamond Edge 2.

Bids, orders, and inquries can be e-mailed to atarisale@orres.com
or FAXed to (503) 624-2940

Harware Items

The terms of sale are VISA/MC, PrePaid Check, or UPS COD. Although, all
items offered for sale are in perfect operating condition, this is a
private party transaction and no warrenty of any kind is expressed or
implied and all sales are final. No prices are listed, we will be taking
bids on the equipment until a reasonable offer is received, bundle offers
including monitors and a computer will receive precedence over sperate
piece offers. Shipping is additional at actual cost. You will be notified
if your offer has been accepted.

The following hardware items are for sale:

Computers(includes keyboards and mouse)

Falcon 030, 14Meg Ram, 65MB internal hard disk, 1.44MB floppy
TT030, 8MB Ram (4 ST ram 4 TT ram), 80MB internal hard disk, 1.44MB floppy
STacy 2MB ram, 20MB internal hard disk, 16MHz Adspeed accelerator installed

Monitors

TTM195 19" high resolution monochrome monitor for the TT
PTC1426 VGA color monitor for TT or Falcon 2 available
SM124 High Rez Monochrome monitor for any Atari
SC1224 Standard Color monitor for any Atari except STacy

Misc

ICD FAST SCSI tape drive
ICD Link SCSI host adapter
Syquest 44MB external removable SCSI hard drive

210 MB external SCSI drive.
Supra 33,600 Modem
US Robotics 28,800 Modem
Supra 14,400 Modem

Software Items

The terms of sale are VISA/MC, PrePaid Check, or UPS COD. All sales are final no returns or refunds. These are HiSoft products are at our cost or Oregon Research products at manufacturing cost. Shipping is additional at actual cost.

Product Cost Quantity Available

Clarity Falcon Direct to Disk Sampler $75 1
ColorMaster Color splitter for VideoMaster $48 1
HiSoft BASIC 2 $59 2
Lattice C V5.6 $117 1
Papyrus Word/Document Processor $84 15
True Image w/ TruePaint $35 1
ProFlight air combat simulator $14 1
Calc 3d Spreadsheet $14 1
Diamond Back 3 $5 many
Diamond Edge 2 $5 many
DATALite $5 many

Source Code

The terms of sale are PrePaid Check. All sales are final no returns or refunds. No residual technical support is included as part of the source code sale unless specifically negotiated seperately.

We are offering the complete source code to both Diamond Back 3 and Diamond Edge 2 for sale. Initially offers will be collected for an exclusive sale to a single party. If no satisfactory offer is received for exclusive rights then the source code will be offered for sale on a non-exclusive basis.

Offers may be made for either product individually or for both. Preference will be given to offers for both products. Both products are written in a combination of Lattice C 5.6 and Devpac 3, both of which will be provided if required as part of the sale as well as the InterFace resource construction program.

Bids, orders, and inquries can be e-mailed to atarisale@orres.com
or FAXed to (503) 624-2940

Thank you,

----- Diamond Back 3 & Diamond Edge 2 Source Code Sale ------

After 10 years of developing and supporting the Atari platform with
the highest quality software and hardware available, we are forced to
permenantly close Atari operations. This is done with a sad heart and
only because we can no longer make a living selling Atari software and
have been forced to take other jobs.

As part of the shut down we are liquidating our entire inventory of
Oregon Research and HiSoft software at cost. We are also selling all of
our Atari harware to the highest bidder. This was posted seperately for
North American distribution only. In addition, we will be offering
for sale the source code to Diamond Back 3 and Diamond Edge 2.

Bids, orders, and inquries can be e-mailed to atarisale@orres.com
or FAXed to (503) 624-2940

2997. NEWSwatch 1.30 released

Newsgroup: comp.sys.atari.st
Date: 1997-11-26 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <77415233_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 113023
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version (1.30) is now available at my web site (see .sig)

This version has a major bug fix to the byte count in *rnews* format ie.
NOS format. This should not affect existing NOS/Oasis1.3x users, but
now also allows the retrieved news articles to be imported into Okami 1.29
and above!!

Thus NEWSwatch now retrieves via STiK/STiNG, news articles for use by;
Oasis2, Oasis1.3x, Snews (NOS), and Okami 1.29+

They may be passed. However, some old GEMDOS versions have big trouble parsing them. But basically they are supported (and documented).

Oh yes, it does. There is no path length limit in GEMDOS at all. Maybe in the AES and the desktop, but not in GEMDOS.

That's basically what he is saying IMHO, which is the sad bit about this reply.
One more spoiled by BSD's reputation for being the faster stack (With Unix I
should add, for Ataris I had quite a few reports by people who dared to actually
compare MiNTnet and STinG's performance on similar connections, all comparisons
consistently turned out in favour of STinG).

Cheers Peter

> is a BSD-influenced kernel. It all follows...

I could say MiNT has been written by people who knew Unix very well, and liked it so much, that they did not manage to face the fact the Atari ST was not delivered with Unix, but TOS. TOS is not Unix, yet they spend every effort to make it as similar to Unix as possible. Now the other fact people like you Howard seem to be unable to comprehend is that Unix is not desirable for every-body. Despite of MiNT, TOS is an independent platform, with different goals. Ever wondered why so many people prefer Windows to Unix ? Reasons are quite the same for Ataris, regardless of our general dislike of Windows. Multi-user capability is nice, but far from top priority for most Atarians. Multitasking is still not top priority for many Atarians, although this is changing. These people want a system that is easier to handle than a Unix setup is. Sure, they want a speedy TCP/IP stack, but STinG has proven they can have one that is speedier than MiNTnet, even though STinG does not use BSD sockets. Does this tell something to you ? It tells me that BSD sockets are not a religion that would be so ferociously advocated like some people do here (strangely enough, reminds me of Islam, but, sure, Christianity is only little better), that it's not the top number one reason why one stack should be faster than another. On top of all it's efficient programming that determines speed, and, that's for sure, that's something STiK / STinG client programmers are not bad at.

Bottom line is the Atari's OS is TOS, not Unix, and that alone should tell that BSD sockets are not necessarily the best option for it. Certainly they are a good option, as it's success under Unix has proven, but that did not prove that there is no better option. So just like MiNTnet was the best for MiNT (i.e. a Unix-like setup), I claim STiK / STinG is the best for TOS (counting MagiC here too, as Andreas Kromke does not adopt blindly everything from Unix, but picks the good stuff.)

I do not dislike Unix, nor MiNT, nor BSD sockets, in fact I do quite a bit of work with Linux. But I realize there are other ways of viewing the networking world. And I realize that Atari machines are not Unix machines. And I said there will eventually be a BSD library for STinG. But I somehow doubt that it will be used very much.

Cheers Peter

Now there's optimism! How do you cannibalize a computer? Anyway, whether the original poster got his numbers correct or not doesn't matter. It's the attitude that matters. For me, I will always own a TOS machine until I can no longer get one. Only then (and when my last Atari finally dies) will I grudgingly begin to concider a PC as a pittiful excuse for a substitute. With the release of these new 040/060 machines (however expensive they may be) and the constant release of new commercial and shareware software, and with new disk/online/print magazines, I don't concider TOS a dying platform. Not yet.

By the way, I don't know if it's 1500, but I check the newsgroup at least once a day, and I am nearly always greeted by a wonderfully long list of postings! I share the first poster's optimism for this platform, and praise all the helpful, optimistic Atari owners out there!

I believe he meant version Score 2.0x, which is newer than the old 3.0x
versions...
Another thing to have in mind is that if you want to use the score editing,
you will need at least 2MB RAM, but if you don't need the score part, it
should be enough with 1MB.

Check out my homepage to get to now some things about the Falcon and it's use in a studio. You'll also find some magazine articles that I've written, as well as some tips when things go wrong...

I'm still trying to get information from all of you who are using your Falcons with Cubase Audio, about which SCSI-harddisks you're able to use for the audio recordings (and which ones you can't use). I can't get hold of all drives myself for testing, so I really need your help. So far I haven't had more than 5 answers!!! Please make things easier for all the people who are in the process of buying Falcon systems and send this info to me. I will soon put up a page about these HD's for everybody to take advantage of.

Best regards,
Claes Holmerup

If you're having trouble getting the stop button to work, try using the escape key on your keyboard instead. I have been quite happy with the lever of 'abort control' I have with CAB, finding it preferable to Netscape and much preferable to the almost useless stop button in Internet Explorer.

TOAD ???? Well, I've probably spent around US$3000 with them on a Falcon, FDI, Logic, external SCSI, and some other stuff I don't remember now, but the last several times I talked to them (maybe 1-1/2 years ago) they were very unhelpful and didn't really seem too interested in my business, so as with most other companies that exibit this odd way of handling customer relations, I "took my business elsewhere". Too bad, really. Us Atarians can't afford to keep losing dealers. If they are no longer interested in supporting Atari I wish they'd just have one big "getting out of the Atari market" sale, and be DONE with it! :-(

3010. Falco +Real Audio ?

From: imok@tiac.net
Message-ID: <65g49d$eqe@news-central.tiac.net>
Source record: 113078

I have a STacy2 (rare Atari laptop!) (upgraded to a STacy4) with 250hd in good condition with lots of software. I'm selling it because I just got a Atari Falcon and no longer need the STacy but if I had more money would keep it. I have the following software installed:

Midi Software

AkaiSex (Akai sysex midi dump)
Avalon
CuBase 2.0
CuBase 3.1
CuBase Score
Dr.T's
Edit Trax
EPS
PTPlayer
Sweet 16
Zero-X
(and 2 midi cables i'll throw in)

Its a great machine, it kicks ass for the price (compared to a pc) Atari always made great computers this is a good exsample (midi in/out built in). The system is black with a Active Matrix mono screen, built in trackball, num keypad, power supply included. Also very nice user friendly OS and Filemanager (+ utils) lots of other software included (CoNnect and Cab/STiK for net access) very nice machine, i'm almost sad to give it away after all i've done with it, I'm only asking $650 + s/h email me with questions or offers, thanx...

3013. CNAM "Logiciels" list

Newsgroup: comp.sys.atari.st
Date: 1997-11-26 00:00:00 UTC
From: 404on040@remove2reply.iwvisp.com
Message-ID: <65g5bq$12t3@news.iwvisp.com>
Source record: 113079

While jumping around with CAB 1.5 tonight (yes, it does work fine:),
I came across the /comp/atari/Logiciels/logiciels.html page on CNAM.
Listed was some very interesting hardware from dealers like Turtle Bay
and Lexicor France. 060 cards for TT's and many different video
grabbers for both the TT and Falcon. I would die (well, slowley
wilter) to get my hands on some of this stuff, but I haven't heard
anything about Turtle Bay in a few years, and I thought Lexicor was
dead around the world.
Anyone over there know the status of this page? Is it a wish page
only?

Thanks,

Mike

Can I use a Syquest EZ-135/Jaz/ZiP drive on an ST?
Can I read/write BigDOS/FAT32/VFAT/Win95 on Atari?

Since Uwe Seimet provides intelligent answers to all the above,
I was wondering if he would care to prepare an "Atari HD FAQ"
and make it available on his homepage?

I would gladly put a link to such a FAQ on FUNKYWARE.
(and upgrade to HD-Driver 7.0 if it was still sold in Canada...)

***

Speaking of HD-Driver, I notice v5.13 does not recognize an EZ-135,
even though the utility to parse the SCSI chain that's included does.
However, good old (read: outdated) AHDI 6.05c manages to find it.

Any ideas why, Uwe?? ;-)

I must have misconfigured some parameter, but which one?

From: Martin-Eric Racine FUNKYWARE http://www.megacom.net/~q-funk

According to Syquest Sales, there is no plans for a SCSI version which is contrary to a couple ad's/reviews I've seen saying early 98.
I have place a order for the internal EIDE model from Computabiltiy which says they have an exclusive 30 day contract with Syquest and should have the internals in 12/15/98, so the drive, with 3 additional carts (4 gigs total) + s/h total is $288.97

I recall paying over $400 for a 212 meg HD a few years ago for my Atari, so this doesn't sound high to me. Sure, you can now get 4.3 gig EIDE drives for a PC now for $220-300 range, but you can't keep adding 3 gigs for $100 for ever..

>For those looking to buy one of these, from what I understand, expect >supply problems similar to the first ZIP shipments...backordered out the >wazoo since demand exceeds supply, and limited cart availability (at least >at first) due to the same problem.

Yes, does sound to be very popular. Syquest expects high demand from the start since it was starting to ship 11/17/97 according to them for the PP model, EIDE in DEC.
Yet, IOMEGA's making a 2 gig JAZ drive that costs over $500.

Just don't see that selling verses the SparQ at $199 for 1 gig..

These are the original Atari HDs, only available on the second hand
market. They are pretty old, fragile, slow and ar only 20 to 60 Mb.

I'll let Uwe answer the first few, but I can relate to your latter
experiences. I went round and round with this issue. I tested HD
Driver V5.XX, 6.XX and 7.XX on an ST with Link II, a TT on the SCSI
and DMA with Link and three different Falcons. I have three EZ 135's
that were tested seperate and in a chain.
Two of the EZ's always report as an Adaptec drive, and one, depending
on which of my 8 carts are installed, reports back as an EZ 135 or
Adaptec. I tried formatting the carts with every HD utility I have to
try and find why one reads as an EZ and the other reads as an Adaptec
in the same drive. I even formatted on the Mac, then stuck it back in
the Falcon drive to reformat it, but no change. I tried ICD Pro, AHDI
and SCSI Tools too.
The only strange thing I did was to format some of the carts on an IDE
EZ that was at one time connected to my Falcon. HD Driver never liked
the IDE EZ, so I always used HUSHI as a driver with that machine. Once
removed, I had to reformat the disk for HD Driver to utilize them. I
don't think that is the problem, especially if others are reporting
like problems. As some of the drives have a different revision number
reporting under a SCSI inquiry, our best guess was that there is a bug
in the Syquest firmware. This however does not show up on the Mac,
but then the Mac driver is quite different in its approach than any Atari
drivers.
The really isn't a problem until you upgrade up to V7 of HD Driver.

The device checking is much more involved (Uwe probably has a better term for this:), and only the drives that actually show up as an EZ 135 will function. Anyother EZ in the chain that shows up as an Adaptec will not function unless the cart is inserted after boot up, and then will cause the other drive to screw up.
Beats the hell out of me what it is.

Mike

>
> Does that apply to all system/adaptor configurations.

This applies to the TT and Falcon. For the ST/STE you need a LINK96/97
host adapter. Otherwise drives like the Fireball don't work at all
because they are not recognized by the ST/STE.

No, you're no exception to the rule. Your hard disk driver is not loaded
from the SCSI drive but from your internal IDE drive. The device from
where the hard disk driver is loaded is not related to the driver from
where your AUTO folder programs etc. are loaded after selecting the boot
partition by a keystroke. The hard disk driver is always loaded from the
first bootable hard disk. IDE hard disks are checked first.

s> be limited to 32K partitions for cross platform readability.

That should be 32 *Megs* not K :-)

In any case, try re-partitioning rather than formatting first to see if that works as it's quicker. On my EZ135 the cart is originally formatted for reading by both PCs and Macs - there is software for each on it -but I had no problems repartitioning these on my Atari.

Hi Arthur.

I assume you have a 1 Meg system, because a 1 Meg file is (but barely) workable in 2 or more Megs. Anyways, you can load the file in your atari, but you should sacrifice the number of colors and/or the resolution of the scanning. On most scanner drivers you can adjust the color deep and resolution of the image, so start reducing the color deep to 256 (8 bit and pretty good quality) or 16 (4bit but low quality) and you will save a lot of space... use an uncompressed format (e.g uncompressed TIFF) to approximately know the size of the final image and fit it to your free memory after load PI. Don't forget to activate the virtual (disk swapping) memory option in PI pointed to an empty folder. If it is still too big, just reduce the resolution of the scanning until it fits.

If you want to work with your current files, look for a friend with a plenity-of-memory computer (any computer type) and reform the images using a image retouching software, changing the same parameters.

If you will do a lot of image retouching I recommend you to upgrade your system memory.

Hope this helps...

Daniel.

Yes, try re-partitioning over reformatting first, as Peter says, -but- when done, copy some files over to the EZ and then test them. Try to read a text file, or run a program. I'm saying this because on a DOS formatted EZ-135 cartridge that I partitioned, I had problems. Every single program that I tried to run after copying, crashed. Not saying this will happen to you, just be careful. This was on a TOS 1.4 Mega ST, with ICD's Pro Utils 6.5.5, and a Link II adaptor. So I reformatted it under TOS and I never had another problem with it...Good luck! :)

Source record: 112899

Hi there,

((Excuse me as this is my 1st post to the newsgroups, many thnx to Deja News))

I currently trying to set my Falcon and my 800XL so that I can do the following...

Have a CD Rom of Atari 8-bit software sitting in Falcon CD ROM drive. (or copied on it's HD) It is linked via SIO2PC cable (i think) to my 800XL Then access the files on the CD via my XL using standard DOS, and run them. [I think this is like APE on the PC's]

I *think* I need to slightly modify the standard SIO2PC
And also run something like 800XL DJ on my Falcon.

Has anyone done this, and can give me a nice easy walk through,a place to buy an SIO2PC cable, or perhaps even english Docs to the 800XL program.

Replies to my email address would be much appreciated.

Many Thanks,

John E. Cash

Wonderful. AND we can't even get v2.5 here in the States... :(

Yes you can - give Systems For Tomorow a call
(sales@SystemsForTomorrow.com). Price? about (US)$50.

3040. Re: Can an SC1224 monitor be used with a PC?

Newsgroup: comp.sys.atari.st

Out of the ether, the following was mentioned by bales@hol.fr...:

>> I've got an Atari 1040ST, with its color monitor, an SC1224. Can
>> that monitor be used with a PC running Windows 95/NT?
b> It would be funny to see Windoze running in 620x200 though!
I've run Windows 3.1 on an EGA monitor which is pretty close and I agree it
does look pretty funny! ;-)

The "f" after the 1040ST is telling you that your machine has a TV modulator built into it. Later versions of the 520 and 1040 would have an STfm. TOS 1.0x was the first version of TOS to be built into roms instead of being booted from a disk drive. I would say that your best bet would be to replace TOS 1.0x for a later version like TOS 1.04 This is one of the better versions of TOS that didn't have bugs. In order to use TOS 2.06 you would have to make hardware modifications to you ST. Just remember it cost $$$$$. Also check to see how many roms are used for your TOS. It could be either 2 or a 6 chip set. You can buy either chip set for about $60.00 from Best Electronics in San Jose, Ca. Make sure to follow the instructions carefully. If your goof up it could screw up the TOS ROMS or even the computer. If you feell that you can not make these changes. I would be more than happy to do it for you for $30.00 plus the cost of the ROMS. The old roms would be returned with your unit. I can also do memory upgrades to a max of 8 megs and most any repair for the ST/STe/MegaST and MegaSTe's to include high density 1.44 floppie drives. Hope that this helps you out.

THE ATARI ST QUICK FAQ
v2.1 - 1997/10/17

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA-HTML)
http://wwwperso.hol.fr/~nbales/quickfaq.htm (Europe-HTML)
or
ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway-ASCII)

If you don't have web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ directly to you:

bales@hol.fr

This announcement is manually posted once every week.

Nick

What size and type of SIMMS is it that you have? I have a stock 1040ST with a color monitor or a monochrome. Also have a extra hard drive with a ICD Adscsi plus that I built think it is 80 meg. Or I could put together a Fujitsu 130 meg full height drive in a showbox style case. Drop me e-mail and let me know or a number so that I could call and talk with you.

Sorry, I don't have the time for this.

> Speaking of HD-Driver, I notice v5.13 does not recognize an EZ-135,

We had a thread about HDDRIVER and the EZ some weeks ago. Several users said their EZ works fine with HDDRIVER. So there can't be a basic problem.

> even though the utility to parse the SCSI chain that's included does.

Did you enable HDDRIVER to check the EZ drive's SCSI ID? The ID check checks for all devices, but HDDRIVER only checks those it was configured to check with HDDRUTIL.

> HD-Driver ?

No, this is impossible. HDDRIVER has to be loaded first by TOS. But TOS
won't find the drive and so it can't load the hard disk driver's boot
loader.

It sounds like you have one of those rare STs with a _bitter_ chip.

Actually, the last two weeks have seen some 700 messages posted to this
newsgroup alone. Those STs being sold-off are going to people who will
use them. There's a surprising number of people looking for STs, too.

Sure we're dying... but what a slow, enjoyable demise. And who says you
can't take it with you -- there's always emulation when the heart
finally stops.

Perhaps all die-hard Atarians should meet in Guyana and drink
over-the-counter "Gatesorade" together.

Don't save me a seat... not yet, anyway <g>.

Well, they don't actually. They seem to have problems with "giving away
proprietary information". Whatever in detail that means. Anyway this is the
reason they need to be convinced by means of e-mail.

> Anyhow, I digress - I've been told by another Atari ST user that the
> 9600 baud limit may just be a TOS limitation, but I thought I'd verify

The 9600 are no limitation at all. Well, a limitation imposed by that ancient control panel you've used. The hardware limits the speed to 19200 bps, with a small hardware add-on you can get up to 115200 bps (where the data can be processed fast enough). So just use a different configuration program to double your speed.

> here. If it is a TOS limitation, are there utilities that I can load

It's a good idea to install HSMODEM, which is an optimized serial driver without the bugs introduced by the in-built drivers. You can find that one on my home page (see signature for URL).

Ok, here is the positive answer. I fixed this problem today. By the weekend
you can find the corrected SERIAL.STX in the MODULE.LZH on my web page.

Cheers Peter

>loader.

First of all, apologies-because now I'm confused. I thought that in the previous message in this thread (to me) you said that using a Fireball SCSI series hard drive, along with The Link 96/97, and HDDriver-that you could boot up with no other hard drive, on any Atari ST/STe... Did I read some-thing wrong? If so, again, I apologise... :(

Not being picky, but thats not quite right, is it? I thought that the "f"
designated an internal floppy, and that "m" designated the TV modulator. So
"fm" meant internal floppy and TV modulator... Can some of you other Atari
hardware Guru's step in here, and correct me if I'm wrong... :)

>
>But then, maybe you were talking about 1500 8-bit game machine
>messages, and well, whatever.

Running Oasis, and not being on for 2 weeks, I connected to my newserver
and was rewarded with 1486 messages. This included these Newsgroups:

alt.atari-jaguar.discussion
alt.games.lynx
comp.sys.atari.8bit
comp.sys.atari.advocacy
comp.sys.atari.programmer
comp.sys.atari.st
comp.sys.atari.st.tech
demon.ip.support.atari
rec.games.video.atari 97530206 3

They were new messages, AFAIK. (at least, I hadn't read them from the
last time I was on, 2 weeks previously!) :)

> too, as Andreas Kromke does not adopt blindly everything from Unix, but picks
> the good stuff.)

I think you missed on very important point which is that using BSD
sockets makes it much esier for us to use already developed code. We
are already having problems with not getting to far behind of the rest
of the
world and if we used a common used interface which makes it easy to port
already excisting code we could in many cases get a "free" ride on their
development. For an example Howard said that he incorperated SSL support
in his ovl in a matter of hours, how long will it take (if ever) before
STiK/STiNG users will see it?

I think this is a very good reason to use a standard way of doing things
insteed of going our own way. Okey if you can keep up with the world at
their speed it's fine, but I kind of doubt that.

Don't take this only as criticism as I think you are doing a marvelous
work,
it's just that we don't want it to be a waist of time and that we want
to
be able to use STiNG in the comming years insteed of move platform just
becuase we can't keep up.

If by "TV modulator" you mean "RF modulator" it's wrong. Only the 'STfm'
versions have it.

Hi all,
Sorry I've not been able to reply to the numerous offers of help
before now. As I've mentioned before, the majority of them I downloaded
with zero bytes. As it was important to me I deleted all the news items I
had and downloaded again. This caused me a lot of headaches which I won't
bore you with. However my thanks for the replies from Stephane, Joe,
Daniel, Malcolm, Dr. Uwe, Benjamin and anyone else I might have missed, all
of which were interesting and useful.

Thanks Derryk,
I will try and locate CBHD driver and give it a try.

I have tried ATHD and a Gasteiner driver, but neither of them would
load more than 4 partitions, and I have 6. I did try running Magic with
ATHD but the system crashed with multiple bombs.

Dr Uwe Seimet's reply suggests that I will have to reformat my
drive, which I'm not looking forward to. I tried to download that demo of
HD-Driver v7.1 but didn't seem to be able to log on to the site. I'll give
it another go sometime.
Regards to all

If I had really missed that point I had not started with the BSD library
in the first place. I know BSD is important, my message only was that it's
not everything.

> world and if we used a common used interface which makes it easy to port
> already excisting code we could in many cases get a "free" ride on their
> development. For an example Howard said that he incorperated SSL support
> in his ovl in a matter of hours, how long will it take (if ever) before

I don't know yet. Problem mainly is that the STiK API lacks a few minor
things that are needed to get a proper BSD socket API library. I do not
like very much to simply extend the STiK API on my own, I want other
opinions and suggestions in this respect (if you have something to say
on this, you can join the discussion too), and I want to reach agreement
with Dan Ackerman (STiK author) to keep the STiK and STinG APIs compatible.

Actually on this very subject we lack BSD experts in the discussion.

Cheers Peter

The link to these programs was already on the U.T.S.I since three days
ago, thanks to Mr Benet the aFTP's french translator !

U.T.S.I is at:

http://ping4.ping.be/dipching-drulkhor/PRG-IND.HTM

at communication software pages

A great new is that STUDIO SON from Studio Capitale Paris is free/full
version 2 downloadable from my pages ...
And believe me or not you can choose between the french and the
english version ... both free from their authors !
If you own a Falcon, try it absolutely ... direct to disk !!!!!!!
and PROFESSIONNAL program !!!!!!!!!!!

More advice needed re scanned pictures. I've scanned in a couple of photos on a PC, and the JPG file is over 100k. If you wind this up to a GIF you end up with some enormous file of about 970k and nothing I've got will load it, let alone work on it. I assume this is because it's in about n million colours.

So how can I reduce this to a sensible size so I can at least load the damn thing into positive image, and what do I do it with?

Avalon has been available until its 2.10 version and after that died
on the floor ... the third version was created for the Falcon and had
terrific edition capabilities but was never sold or even produced in
a demo version ! A pity because version 2.xx even don't run on a 030
machine ! :(

..and robert goes to the web, WITH STinG ! :-)

Wah, great, thank you peter.

Today i take the latest release of your modules.
It was a simple handling. Drag the new modules into STinG's Folder.

Reboot and if works well. (Without change any other parameter!)

OK, i'm cut off, i will make some more tests :-)

(At the first look, STinG/PPP works faster than i-connect)

Regards, Robert

well you stepped into this thread because you didnt agree with my
point of view, and thats a welcome thing..... I didnt agree with the
first posters point of view..so we have both done the same thing
havent we ? so I don't see what your problem is:)

>the poster was saying. A different attitude by everybody would lead to a lot

Wouldn't it be a boring world Peter if we all thought the same and we
all agreed on everything ?

>of entirely useless blabla in the newsgroups. Or what would you call the major
>part of the contents of this thread ?

hmm this is your second posting to the thread.. and I am simply
replying to your comments.. You shouldn't be so harsh on yourself. I
dont think your talking that much useless blabla.......

Hello ...

Does anyone think the new Milan will sell bucket loads because of its high spec and low price?

What if it does? What if 100,000 people bought a Milan?

What then Apple?

What then Mr Gate$?

jim.

>>
The control key on my Mega STe keyboard failed. I purchased a
supposedly reconditioned board from the local Atari service agent (of
fond memory). This failed not long after in the same way. I then
discovered the cause and a way of fixing the fault.

The problem was not with the key but with the copper line in the
membrane which services the key. The same line on both keyboards
exhibited small corrosive breaks in the copper. I bought some
conductive paint, intended for repairing damaged demisting heaters on
car rear windows. Using a craft knife I very carefully scraped away
the plastic of the membrane above the copper track (on the key or
upper side of the membrane) on either side of the break exposing the
copper. A line of conductive paint joining, and protecting, the
exposed bits fixed the problem. I have had no recurrence in at least
three years, and two working keyboards.

> work on it. I assume this is because it's in about n million colours.

saving as a gif automatically reduces the number of colours to 8bit
(256)
as well as compressing the file. Except of course it uncompresses when
you load it.
If it is 970K when compressed, then it will probably be about 1.5MB when
uncompressed,
a little too large for your system I guess. If you can save it as a
ximg(colour img)
file with 16 colours so you can open it on the Atari.
check out Graphics File formats at for related info
http://www.dcs.ed.ac.uk/~mxr/gfx/2d-hi.html

> So how can I reduce this to a sensible size so I can at least load the damn
> thing into positive image, and what do I do it with?
> Arthur

Does PI handle the XIMG format? Since you have to move these from a PC
to a format
your Atari(PI) can use... apparently the new PI can handle compressed
BMPs
that might do the trick

Source record: 112839

I just recently purchased the Falcon colour scanner with the MicgraphOCR
package.
while the ColourKit software works great scanning in colour images or
black and white text, I can't seem to scan text in directly to
MigraphOCR with the scanner.
When I attempt to do this I get a series of solid and dotted lines, not
text!
Has anyone experienced this problem, and/or knows of a solution??
thanks for any help

Message-ID: <horseman-2811971549210001@slc240.modem.xmission.com>
Source record: 112841

Hey all,

The documentation for the CAB browser (1.5 & 2.0 demo) says that the browser should run in more than 16 colors, but when I set my desktop to 256 colors the browser will not run. It generates bus errors under MultiTOS, or an illegal operation error under normal TOS 3.06.

I'm using an Atari TT030 with TOS 3.06, 8 megs TT, 2 megs ST, STiK 1.12, MultiTOS, Speedo GDOS, and an ET4000 graphics card (Crazy Dots 8).

Any ideas on what I'm doing wrong?

Thanks for any help!

3101. Re: MagicMac

Newsgroup: comp.sys.atari.st
Date: 1997-11-28 00:00:00 UTC
From: curis@news.ens.fr
Message-ID: <65nhgt$l38$1@nef.ens.fr>
Source record: 112842

Dans l'article <65mbi6$f6l$1@due.unit.no>,
Jo Even Skarstein , <josk@stud.ntnu.no> a ?crit :
??I?m considering buying a second-hand portable Mac and run MagicMac on it,
??and I wondered how MagiC performs on a Mac. Can I boot MagiC directly, or
??must MacOS be present? And in that case, what?s the absolutely minimal

MagiC is started from MacOS. I don't if there's a way to automatically
start a programm from MacOS, but I'm sure MacOS has to be present.

??configuration I can get away with? I don?t want to waste more memory or
??disk than necessary on the (IMO) useless MacOS.

According to MagiC Mac doc or FAQ (I don't remeber which one exactly),
4?Mo are enough but you then get only 1.5 or 2?Mo free for TOS programs - not
very much.
The CPU must be at least a 68030.
System must be System 7 (a version for OS 8 is planned, but not yet
available as far as I know).

MagiCMac is very pleasant to use. And, on old mac (like LCIII), it's
much more quick than MacOS for basic things like opening windows and so on. On
PowerMac also, but not so visible...
There's sometimes incompatibilities with some extensions - especially,
MagiCMac doesn't recognize all things like virtual RAM. But I think it works
well if there is not extension at all...

Cross-posted to: or.forsale,pdx.forsale,pnw.forsale,pnw.wanted,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

If you wan't me to read any response from you, do not respond here, Direct all responses in E-Mail to: bensmith@teleport.com

Hello, recently my postings had the subject: FREE Atari Catalogs by E-Mail, FTP & the Web! New Lower Prices! This still and always holds true! I've changed the Subject because I've recently received more Atari stock. Both Classic 8 Bit & Atari ST. HardWare, SoftWare, Books & Accessories. Due to this development, I'll be trying to spend less time on the InterNet and more time organizing, testing, cataloging & pricing the new Atari stock. Besides that I suffer from depression which seems to worsen this time of year because it gets dark earlier. It would cheer me up if we got some snow. Also, I need to see my Doctor, when I can get an appointment with him, about pain in my Right Shoulder and limited mobility which is not good because I am Right handed. So I ask that you keep me in your prayers. And be patient with me if I am slow in getting back to you.

Find Lower Prices @ http://www.teleport.com/~bensmith/bscomputers.shtml

The Bravo Sierra Web Page has been fixed. If you find trouble with my Web Page, please E-Mail me at bensmith@teleport.com.

A note to Repeat Customers: Welcome Back! I dont keep a Mailing List or keep track of your Mailing/Shipping address. To expedite your order, include your Mailing/Shipping address and it wouldn't hurt to include your home and work number.

I am not a repairman/technician. I have some Hardware and other stuff that needs work you can have some ***FREE*** Atari stuff for the cost of Shipping & Handling. Inquiries welcome...

FREE Catalogs for Classic Atari 8 Bit or Atari ST Computers! Hard Ware, SoftWare & Books/References! In BSC's Catalogs, you may find some thing you've been looking for, Something you might want & something New to you! View Catalogs at: www.teleport.com/~bensmith/bscomputers.shtml. And Jump to my FTP site linked to my Web Site so you can Download Free Catalogs or FTP directly to: ftp.teleport.com/vendors/bensmith/ or if you can't get Catalogs that way, Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. I do ask that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. Please let me know if I can't attach files to your E-Mail. I will get back to you after the weekend. Please Direct all Replies Through E-Mail to: bensmith@teleport.com.

I'm looking to trade for these Items for my Atari. I'm looking for CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien vs Predator and even complete Jaguar Systems. If you have what I'm looking for, check my Atari Catalogs for stuff to trade at: http://www.teleport.com/~bensmith/bscomputers.shtml or E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File

called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Looking for an Atari Mega 4 ST. Please, no upgraded Mega 2's. I need a stock 4 MB Machine Plus a TOS 1.4 upgrade. I need to test the Mega 4 ST before I pay. I was recently burned by an old friend who said the Mega worked. He couldn't refund my money. I can't afford to be burned like that again. Please do not reply here as I dont read message bases. Please direct your reply through E-Mail to bensmith@teleport.com or call Ben at: (503)256-9974.

P.S. I'd need to keep this transaction solely in the United States.

Yep, that's a great thing..
I use a PowerBook 5300cs by my self, allways with MagiCMac.
Before that, i use a simple 68040 PB190, but the real performance of
MagiCMac you found with a PPC CPU ;-) (That's true) ;-)
My setup is allways 256 colors!

First, after startup your Mac is a Mac, allways.
It's eays to move MagiCMac into the autostart, so you will see the
Mac only for seconds..

It's easy to use!
(Switch off power save options while use MagiCMac on a PowerBook)

Some 1st impressions:
1. It didn't recognise my Nova card. Graphics were a mess.
However, it works fine without it, and does a fairly decent job of
dithering the pictures.
2. I haven't actually made it online yet. It is apparently
connecting with my ISP, but then nothing but DNS failures. I haven't
really spent that long trying to configure it properly yet, however.
3. I've some mixed feelings about it. It's not as polished as CAB,
or WenSuite - but it looks like it is going to be a worthwhile package
- Java support? Hmmmm. While it's nice to see some more development
for our platform, especially a comprehensive one like this, I wonder
if the market is large enough to support all three suites. I'd hate to
see all three groups go down because our funds have to be split in
three directions. Perhaps (hopefully) I'm wrong, and all three
packages will be a commercial success.

Hey Peter - with the money you spent on your fancy machine, don't you
think it should have included a decent spelling/grammar checker?
That's "'too' busy".

>
>> >What then Mr Gate$?
>
>$1.00 less in the bank.

Technically, it's nothing less in the bank - or is he setting up a
personal account to help Atari enthusiasts purchase a Milan?

>Peter S.
>Apple Power Rep - Iowa & Nebraska

The thing I wonder about is:

1. "Why do you waste your time (when it's apparent that you think you
need to own such a fast machine with all those useless time-saving
gizmos to save your time in the first place)?"

2. "Why do you waste our time (when it's apparent that you think we're
here in the equivalent of a horse-drawn buggy - and therefore shouldn't
have any time to spare for your drivel)?"

3. Do you think that Apple is some Mom & Pop cottage industry without
an advertising budget? That their survival depends upon you annoying
people? Hey - News Flash guy.... We've known about Apple for 20
years, and we've known about the Macintosh for 13. Those of us that
want an Apple have already purchased one, or can't afford to. The
majority of us simply love our machine, period. Sure, I'd love to play
with a Cyber, or a Cray Y/MP for a little while, but I'd still come
back to my Atari.

I believe the power supply in the Mega ST and the MegaFile hard drive enclosures are also the same. I've seen one case where a fellow hacked a 520 brick p.s. for his 1040. That adds up to several options, eh?

Don't wanna burst your bubble here, but good as an ST is, these items are not worth a lot; without the power supplies and cables, they're less than worthless, because you owe it to yourself and your planet to seek out someone who can and will use them. When you've located such a worthy recipient, I will donate the power supplies and cables. I can't afford shipping, though, and there's currently a postal strike here, so...

Whatever you do, don't just throw them away, because any computer hardware just looks so WRONG in a landfill. Perhaps you could donate them to a Goodwill store, or the like. I know ST hardware does end up there, and some people seek them there, and know or find out what to do with the stuff.

On 27 Nov 1997 13:11:48, sinclair@marketsource.com wrote:

(MCIBTYC drivel removed)

Well, it looks like the sewers are backing up again - TIFKAS, The Idiot Forever Known As Sinclap (now that he has been booted off another ISP) has decided to reward us with his presence again on comp.sys.atari.st. Except this time, TIFKAS, the advantage is ours! Muahahahaha!

Remember, folks, one thing TIFKAS hates more than anything is for everyone to ask him logical questions that he can't answer without showing his extreme ignorance. So ask away!

And speaking of drivel, let's go on with these questions that Petey-boy still dodges in comp.sys.atari.advocacy:

1) you claim that Apple is actually turning a profit. How can that be when the fiscal year report shows that Apple LOST ONE BILLION DOLLARS, with $160 MILLION LOST IN THE LAST QUARTER ALONE?

2) you claim that Apple is stable. Why, then, did a well-respected company accessor recently give Apple a failing grade, and said that they cannot sustain any further losses?

3) you claim that Apple is still licensing the manufacture of clones. Other than UMAX's contract which allows them to manufacture Mac clones for the Far East, what are the other companies making clones after December 31st and how did they get past Steve "Arrogant Bonehead (TIFKAS' own words)" Jobs decree of "no more clones". Please provide any documented evidence ("because I told you so" is NOT considered good enough - we want magazines, page numbers, web pages, anything).

4) why is Petey-boy so afraid to post any of his Mac "good news" info to comp.sys.mac or comp.sys.mac.advocacy, which have shown nothing of any of TIFKAS' drivel, but the exact opposite? Is it the fact that if he did, he would be reduced to an onion ring within a matter of seconds? :)

5) you claimed that in one Apple dealership that you could take all the software available there for the Mac and pile them in "12 30-foot piles" (cross-platform titles included). Were they individual titles, or several of the same titles? Were any of the titles in the delete bin? Why, when I went to a couple of well-known computer dealers in Toronto that cater to Mac users could I not visualize "12 30-foot piles" of the software available there? Are you sure that the "12 30-foot piles" are not the copies of MacUser you have in your basement apartment that you

frolic through naked every night? :)

Just remember these things and keep asking them. Be sure to ask him other embarassing questions as well should they crop up. :)

And TIFKAS, I want answers to ALL my questions. Not which ones you feel like answering, ALL of them. Failing to answer even one shows that you are not qualified to speak as an expert either on Apple or on Atari, and should thereby keep your lip zipped - and proves again that you are a coward.

SAY YES TO APPLE. SAY YES TO ATARI. JUST SAY NO TO DISINFORMATION FROM CLUELESS GEEKS WITH NO LIFE WHO ARE TRYING TO SAVE THEIR JOB.

I agree. In some minor points I find a PC better, but there is a very
big price tag involved I think. But in most things I prefer my Atari
TT. If I remember well, it was released in 1990. Try using a PC from
those days. You would not be very happy I am afraid.
The Atari is slower I agree. (A mpeg-movie I do not want to play. It
is just a shocky replacement of pictures in single mode and on the PC
it is fine with other programs running. But I do not really need
running mpeg-movies. It is nice but not worth paying the big bucks.)
True-color is also nice, but I can get it on my TT if I want, but I do
not want to pay 600 dutch guilder or more for it. No I mis some
things, but I am happy with it. Even if someone said: 'give me your TT
and I'll give you a multimedia pentium PC', I would not do it. If I
had two, maybe I would be thinking about doing it with the second one
;-].

Greetings,

Cecil.

Try encoding it as an MPEG audio stream, there should be some free
sourcode available for that purpose. I vaguely remeber having seen some
MPEG audio layer II (or MP2 for short) encoder binaries for Atari somewhere
as well. Besides MPEG audio players are easier to get hold of for
non-Wind*ws users than RA ones...

Here's another X11-KEMD problem:

I installed all the X11-stuff and tried to boot X11. It'll start, but
xinit won't load any of the programs stated in the default xinitrc.
Actually, xinit won't run anything. I tried both startx and xinit manually,
and I just end up with a nice empty X background and a big cross as
a mouse. No window manager, no xterm...
Anyone?

I seem to recall that they did exactly this a long time ago. When I called them recently, they made it clear that they aren't in the Atari business anymore (as I suspected from the disappearance of any reference to Atari on their Web site). They referred me to ATY Computing for help.

I don't realy care which is the fastes but which is the most usable for
me. It's
more that I want to be able to get the apps I want and not to gain a few
bytes/second and I do belive that using a common used API that makes
porting
other software from other platforms much esier.

From: mike.borsley@zetnet.co.uk
Message-ID: <65n61f$80a$1@irk.zetnet.co.uk>
Source record: 112933

Help please, I have lost two partions and think I'm in it up to here!!

#/#\#
^^^^^^#/* *\#^^^^^^^^^
(^)
/ \

Having tried the Atari and Gasteiner drivers on my hard drive in order to try and load Magic 5.11 neither of them would load more than 4 partions. So I decided to put back ICDBOOT,SYS back on my hard drive in order to return to some normality. Hmm so I thought but it was not to be.

I have tried Cleanup which doesn't seem to offer any help with the problem. I then tried ICDFORMAT.PRG, got to the partioning stage, inserted details of the missing partions but after that I daren't go any further due to dire warnings about the likely chance of all the data being lost.

Can anybody pleeeeease help?

Yours hopefully
mike

So we've both written a program to check MagiC can deal with
c:\\\\fred\\..\\\\.\test.dat then? ;-)

>> Entry[0] is a pointer to itself and

>C:\SOME\OTHER\..\THING cannot be passed to the OS,

You'll have to elaborate on this Peter as I've never seen any
documentation that this is forbidden so we may have our wires crossed!

However, I must mention that I have encountered problems with using
multiple instances of ".." in the path under older tos versions. Your
example above would correctly evaluate to c:\some\thing in these cases
but there was no guarantee c:\some\other\..\..\thing would evaluate to
c:\thing when using calls such as Fopen. It might be a depth
limitation problem or the 40 folder bug kicking in, or both. Who
knows!

>but must be parsed by the shell.

Come to think of it, Fopen might have worked ok but I'm certain
Dsetpath() and Frename() suffered from it.

>> As none of us are privy to the intricate details of how tos works it

That's me being over cautious, just in case the filing system refuses
to look at any entries after it sees the $00 entry.

>> Another thing I've found useful over the years is to extract dubious

Yep - same here. I've never had any other major filing system problem
with magic either.

The TCP/IP option is the only common thing between them. I've tried as
much as I can considering I know little about NT.

>Sounds weird, but I would like to try!

I hoped by setting up a com port for "dial in" that I'd be half of the
way there - it seemed reasonable to assume there might be a driver,
registry setting, or something that could be used to overide the "dial
in" as such and just listen for TCP/IP packets instead. If there is
one then I can't find it! :-((

... but do let me know if you come across one. ;-))

Right, here's what I think of the stop buttons in Browsers:

CAB: Doesn't work during pictures (i.e. It loads in the full picture)
IE: Works all the time, no probs.

I have a selection of Atari ST titles for sale.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...

SCSI SC-ROM drive, Atari CD ROMS, 16-bit sampler cartridge/hardware.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) 3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) 4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) 5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 3

Superleague Soccer (1d,ss) 3
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 4

SIMULATIONS

ATFII (Atdvanced Tactical Fighter II) (1d,ss) 2
Lombard RAC Rally (2d,ss,nb) 2

This is being typed from a TT keyboard, which has been apart for repairs more than once, and what makes it different from my ST and STe are some little yellow rubber cups that are under the keytops. The ST and STe have grey rubber cups without overcenter action. I much prefer the yellow ones on my TT, which handles as well as one of those oddly shaped ergonometric ones on a cow-theme computer I sometimes use at work.

There is one outstanding vote against the idea. I plan to get some for one of my STs in the near future, which is one vote for the idea.

I do a fair amount of typing. I make my living doing technical writing, and my personal bill for outgoing mail is about $10 US per month. I like those little yellow rubber cups, and anything that works like they do.

3153. TT Key Mappings

Newsgroup: comp.sys.atari.st
Date: 1997-11-29 00:00:00 UTC
From: rcain@zetnet.co.uk
Message-ID: <65q4vthll1@roch.zetnet.co.uk>
Source record: 112795

All of a sudden my TT seems to have lost track of its normal keyboard mappings. I have a UK keyboard but it now gives me:

\ when I type ₧
₧ when I type 'pound'
| when I type 'tilde'

etc. etc. :-(

The only significant thing I have done is to install the Magic upgrade to v5.11.

Even if I re-install an old v2 Magic I still get the bad mappings.

I am using Monaco Mono as the replacement system font but I guess this has nothing to do with it as I get the same bad mappings even using the ROM system font.

I have looked in NVRAM but this appears to say I have UK keyboard set.

Help, please!!

:
: Right, here's what I think of the stop buttons in Browsers:
:
: CAB: Doesn't work during pictures (i.e. It loads in the full picture)
: IE: Works all the time, no probs.

My complaint with the IE and Netscape buttons is they are all-or-nothing. Click "stop" and the whole page stops loading. In CAB, click it (or press the escape key) once and the current page element (usually a stalled gif or something, see your complaint about CAB above) gets skipped. Toggle it and CAB asks if you want to abort the page, which you can then yay or nay.

Also, considering the extra horsepower on my windows set-up, the IE stop button is remarkable unresponsive (it works, faster than CAB sometimes, but not as immediately as it should, given my I-net connection and processor speed).

<Jim's stuff deleted>

Chris, I use TT-Touch (Keyclick) with my Falcons keyboard, and it makes
all the difference in the world to me. The feel is much more responsive
and give a positive indication when pressed. I can go use my sons 1040ST
now, and I positively hate it after being used to my TT-Touch equipped
Falcon keyboard. It is a little tedious to replace all those "cups" but
its not technically hard. You will need a #0/1 star (Philips) screwdriver
for the job, but thats not expensive. Just follow the instructions and in
about 30 mins. or less you'll have a much-improved keyboard! :)

3158. How to use .000/001/002 files?

Newsgroup: comp.sys.atari.st
Date: 1997-11-29 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <880832500_OASIS_@pcc-uky.campus.mci.net>
Source record: 112800

Okay, I've gotten my Nemesized Falcon equipped with a 33 mhz FPU now, so I'm wanting to try the Eurodemo that requires the FPU to run. I was thinking that it was Weltscherms, but at 3 different ftp sites, I could only find it in 3 files, ending in 000, 001, and 002. I tried changing the ext. to .TGZ and .TAR, but still couldn't uncompress them. Anyone have any ideas on how to setup these files correctly? (or even better, an ftp site that has this demo in .LZH or .ZIP format?) Thanks in advance for your help! ;)

Ahhhhh! I suspected this might be the case, but was hoping to avoid having
to invest in NVDI.

However, its starting to look like this piece of software really fixes a
lot of glitches and bugs.

Next question: Any ideas on where I can buy NVDI ET4000? Do you think B &
C or Best Electronics carry it?

Thanks again!

Well, another gentleman suggested that NVDI would likely solve my video problems, but I'm curious about this deskicon.rsc problem.

Could you elaborate on that? Is that a Falcon specific problem or is the TT030 prone to it as well?

Hi Everyone!

The following message has been cross-posted from the Internet:

FROM: orres@user1.teleport.com (Oregon Research)
Organization: Teleport Internet Services
Reply Index No: 73612

-!--- Oregon Research Atari Equipment and Inventory Liquidation ------

After 10 years of developing and supporting the Atari platform with
the highest quality software and hardware available, we are forced to
permenantly close Atari operations. This is done with a sad heart and
only because we can no longer make a living selling Atari software and
have been forced to take other jobs.

As part of the shut down we are liquidating our entire inventory of
Oregon Research and HiSoft software at cost. We are also selling all of
our Atari harware to the highest bidder. In addition, we will be offering
for sale the source code to Diamond Back 3 and Diamond Edge 2.

Bids, orders, and inquries can be e-mailed to atarisale@orres.com
or FAXed to (503) 624-2940

Harware Items
-!-----------
The terms of sale are VISA/MC, PrePaid Check, or UPS COD. Although, all
items offered for sale are in perfect operating condition, this is a
private party transaction and no warrenty of any kind is expressed or
implied and all sales are final. No prices are listed, we will be taking
bids on the equipment until a reasonable offer is received, bundle offers
including monitors and a computer will receive precedence over sperate
piece offers. Shipping is additional at actual cost. You will be notified
if your offer has been accepted.

The following hardware items are for sale:

Computers(includes keyboards and mouse)
-!-------
Falcon 030, 14Meg Ram, 65MB internal hard disk, 1.44MB floppy
TT030, 8MB Ram (4 ST ram 4 TT ram), 80MB internal hard disk, 1.44MB floppy
STacy 2MB ram, 20MB internal hard disk, 16MHz Adspeed accelerator installed
```

Monitors
-!------
TTM195 19" high resolution monochrome monitor for the TT
PTC1426 VGA color monitor for TT or Falcon 2 available
SM124 High Rez Monochrome monitor for any Atari
SC1224 Standard Color monitor for any Atari except STacy

Misc
-!--
ICD FAST SCSI tape drive
ICD Link SCSI host adapter
Syquest 44MB external removable SCSI hard drive
210 MB external SCSI drive.
Supra 33,600 Modem
US Robotics 28,800 Modem
Supra 14,400 Modem

Software Items
-!------------
The terms of sale are VISA/MC, PrePaid Check, or UPS COD. All sales are final no returns or refunds. These are HiSoft products are at our cost or Oregon Research products at manufacturing cost. Shipping is additional at actual cost.

Product Cost Quantity Available
-!---
Clarity Falcon Direct to Disk Sampler $75 1
ColorMaster Color splitter for VideoMaster $48 1
HiSoft BASIC 2 $59 2
Lattice C V5.6 $117 1
Papyrus Word/Document Processor $84 15
True Image w/ TruePaint $35 1
ProFlight air combat simulator $14 1
Calc 3d Spreadsheet $14 1
Diamond Back 3 $5 many
Diamond Edge 2 $5 many
DATALite $5 many

Source Code
-!---------
The terms of sale are PrePaid Check. All sales are final no returns or refunds. No residual technical support is included as part of the source code sale unless specifically negotiated seperately.

We are offering the complete source code to both Diamond Back 3 and Diamond Edge 2 for sale. Initially offers will be collected for an exclusive sale to a single party. If no satisfactory offer is received for exclusive rights then the source code will be offered for sale on a non-exclusive basis.

Offers may be made for either product individually or for both. Preference will be given to offers for both products. Both products are written in a combination of Lattice C 5.6 and Devpac 3, both of which will be provided

if required as part of the sale as well as the InterFace resource
construction program.

Bids, orders, and inquries can be e-mailed to atarisale@orres.com
or FAXed to (503) 624-2940

Thank you,

Bob Luneski

Could it be an old Mega ST keyboard? I've never seen the pin-outs of one, but from the one I have seen a picture of it looks pretty much identical to the ST (slanted F-keys, etc.), but it's just an external keyboard, like the TT's, so it's smaller. That's my guess anyway.

I've looked at the Milan page, and what I can understand looks very intriguing, but I don't read German all that well, so I didn't quite know what the whole story is. Could someone please give me a rough translation or even just a summation of what the page says about it in English? Thanks!

Don't some of the image processing programs cache to hard drive so that
your memory doesn't have to be larger than the picture size?

Change of ISP for STOSSER Software (again)

I have to explain that I left my long time isp... and tried prestel..
they unfotunatly where a big mistake :(

Now trying zetnet and am already a lot happier onthe first day :)

EMAIL

NEW: paxton@zetnet.co.uk

URL
NEW: http://www.users.zetnet.co.uk/paxton/

The new web page will be on line over this weekend 29th 30th of
November 1997,

I would appreciate anyone with a link to this page to please
change/update your information ..Thanks

I uploaded nearly all STOSSER software titles to funet.fi and they
should be at least in the new items folder soon.. I will link to them
all from my web page as soon as they show up in there directories.. we
are talking over 60 direct STOSSER titles including diskzines, games
and misc :)

.

> Any ideas on what I'm doing wrong?

Sorry, I can just tell that I've no problem on Falcon, 14 Mo (no
alternative ram), (single)Tos 4.04, 256 colours, 800*608. (Except with
a dma problem that stop disc operation from time to time and for long
seconds, but it's a well known problem). BTW I do have the same
problem as yours with Multitos. It could be because of a too big
deskicon.rsc file.

READ THIS MESSAGE AND PASS IT ON....

A man takes the day off work and decides to go out golfing. He is on the second hole when he notices a frog sitting next to the green. He thinks nothing of it and is about to shoot when he hears, "Rabbit. 9 Iron" The man looks around and doesn't see anyone. "Rabbit. 9 Iron." He looks at the frog and decides to prove the frog wrong, puts his other club away, and grabs a 9 iron. Boom! he hits it 10 inches from the cup. He is shocked. He says to the frog, "Wow that's amazing. You must be a lucky frog, eh?" The frog reply's "Rabbit. Lucky frog." The man decides to take the frog with him to the next hole. "What do you think frog?" the man asks. "Rabbit. 3 wood." The guy takes out a 3 wood and Boom! Hole in one. The man is befuddled and doesn't know what to say. By the end of the day, the man golfed the best game of golf in his life and asks the frog,"OK where to next?" The frog reply, "Rabbit. Las Vegas." They go to "Las Vegas and the guy says, "OK frog, now what?" The frog says, "Rabbit Roulette." Upon approaching the roulette table, the man asks, " What do you think I should bet?" The frog replies, "Rabbit. $3000,black 6." Now, this is a million-to-one shot to win, but after the golfgame, the man figures what the heck. Boom! Tons of cash comes sliding back across them table. The man takes his winnings and buys the best room in the hotel. He sits the frog down and says, "Frog, I don't know how to repay you. You've won me all this money and I am forever grateful." The frog replies, "Rabbit, Kiss Me." He figures why not, since after all the frog did for him he deserves it. With a kiss, the frog turns into a gorgeous 15-year-old girl. "And that, your honour, is how the girl ended up in my room."

The origination of this letter is unknown, but it brings good luck to everyone who passes it on. The one who breaks the chain will have bad luck. Do not keep this letter. Do not send money. Just forward it to five other newsgroups to whom you wish good luck. You will see that something good happens to you four MINUTES from now if the chain is not broken. You will receive good luck in four minutes.

3174. Gemulator- A good deal or another headace?? Want to hear from current users

Newsgroup: comp.sys.atari.st
Date: 1997-11-29 00:00:00 UTC
From: mike.harvey@worldnet.att.net
Message-ID: <65o8od$o5l@bgtnsc03.worldnet.att.net>
Source record: 112862

I'm considering purchasing the Gemulator to use on my Cyrix P-200
computer with 64 megs, 10X CD-ROM, 2.5 GIG EIDE, ZIP, etc

Would like to hear from other users who already have the Gemulator
if it really works good. My main use I believe would be to continue
using Pagestream & Calamus SL using higher rez of 800 x 600 I believe.

The speed sure sounds great and it won't take up any extra room which
is why I sold my TT awhile back to make more room for our first child
due in Feb98.

Post in the newgroup or e-mail directly to me at
mike.harvey@worldnet.att.net

Thanks

Hello Kemosabies,

Well, I still can't get QED to edit messages/mail in WENSuite, but here's a new one. I just tried to download a binary (zip) file from a Web page and WS promptly downloaded the file then said " External viewver not found". That's right "Viewver". SO, how do you setup external "viewver's" in WS so that it doesn't dump the file into "Never, Never Land".

It's a pity really, cause this puppy can go places CABv1.5/2.0a can't!!! Surely those among us who visit fr.comp.sys.atari have seen some discussion of WS by the infamous French flamers :)) OXO, doesn't seem to reply to any email, even polite questions or suggestions ;~(...

Bye, BYE,

Charles
Remove "No.HORMEL.UCE" from email address to respond semi-privately :)

In some cases you can use a PC serial mouse or an old PC bus mouse.
Check out my quick FAQ for that.

Sometimes amiga mice have a switch so thhey can be used on an ST too.

Other than that, you'll have to get one from an atari dealer. I'm not
aware of any in Australia right now though.

3185. Audio HDs

Newsgroup: comp.sys.atari.st
Date: 1997-11-29 00:00:00 UTC
From: claytone@aa.net
Message-ID: <880797868.155680@moon.aa.net>
Source record: 112873

This is my 2nd try at posting this.....

Is anybody using an IBM or Western Digital SCSI hard drive for audio recording on the Falcon? How about Syquest's "Syjet" (1.5 gig removeable cartridge drive)? If so, how well do they work?

How many tracks playable at once....

what brand/version of hard drive software...

what audio recording program....

what transfer rate on the HD...

is it "non-thermal-recalibrating....

and any other stuff you think might be helpful.

By the way, check out Claes Holmerup's posting (#110080) and please respond. Come on, all you CAF (and other audio recording program) users - the last time Claes and I posted these questions we got maybe 4 or 5 responses. That's PATHETIC! We know there are a lot of you out there. Please do your part to help make this newsgroup a useful tool. Don't be content to be a passive reader. There is a need for this information!

Thanks very much-

Clayton Murray

My stupid STacy has disfunctional keys (like all the Fn keys) so I can
select a startup with SuperBoot...
I'm game to repair the thang meself but can't get the cover off cos' of
rear right-hand side odd mechanism... anyone know how?
Peering what little I can see inside, a metal bar holding up (or down)
the kybd has come loose... anyone with suggestions (apart from hit it
with a hammer)?
Fanx

Well, I'm using Macs a lot, and I don't like the OS at all. It looks nice
and tidy, but I get so frustrated by the constant crashes, the hopeless
memory-management and the poor multitasking. On the Powermacs at school,
you can't do a damn thing while Netscape tries to contact a server...

> Any ideas on what I'm doing wrong?

Yes, you're using the original Crazy Dots driver :-) AFAIK there's a lot of
problem with the VDI for the CD-cards, you should get NVDI ET4000 instead.
Then you can ditch SpeedoGDOS as well.

I thought Apple was thinking twice about these Mac clones - I read something about a UK manufacturer (Power Computing IIRC) getting a tad annoyed about problems with licensing Mac OS 8.

BTW, I've used Mac OS 8 - and it's terrible. No dynamic memory allocation, no pre-emptive multitasking, it's terribly unstable, and looks grim. In case you're wondering, I used it on a brand new Power Mac running at about 200 MHz...

3193. falcon record noise

Newsgroup: comp.sys.atari.st
Date: 1997-11-29 00:00:00 UTC
From: Curt Johnsen <cjohnsen@delphi.com>
Message-ID: <xZcjXHz.cjohnsen@delphi.com>
Source record: 112881

I have an mkx with 16megs ram, conner hard drive and iomega jaz,
with cubase. When I have the jaz drive turned on(it is 2nd in
the scsii chain) and hit the monitor button in cubase,and
go for recording a audio file, I immediately pick up a
noise of the harddrive calculating. It appears on the audio file.
Now if I shut down the jaz drive, power, and record on the first
drive, everything is clean. Now if I go into the hardrive
options in cubase and switch to fdi from ad/da and record
from the dat machine everything is clean on all drives,
so it has to do withe the jaz and on and the analog
section in falcon. If i record withe the monitor
button off, I still record the noise if the jaz is
on and the ad/da is on int the harddrive section
of cubase. Any suggestions?
thanx,
curt johnsen

Hello!

I have a problem with my falcon's soundsystem!
For some strange reason the left soundchannel is dead (well not completely,
there is some sound if I set the volume to maximum, but it is extremely
distorted)

If anyone have any sollutions to the problem PLEASE help me! I'm desperate!

HALL schrieb am Donnerstag in COMP/SYS/ATARI/ST :

H> Sounds good except for the fact that I hear it's using it's own standard
H> and isn't compatible with any of the STing/STik based stuff. Is this correct?

That's correct and it's the reason why ASH added an E-Mail/News-Reader and a
FTP-client to their CAB-package. The main problem with CAB 2.5 was, that you
had easy access with it to the internet via PPP (which can't be said of
another solution for the Atari - note the word 'easy'), but you could only use
WWW. Now you can use all the important internet-services (ok, I hope they get
out an IRC-software pretty soon). I hope to get my copy next week so I can
give details on how the new software works.

H> And what avbout English language versions? Will there be any translations
H> of the abovementioned software or is it primarily made for the German

AFAIK I'm afraid even v. 2.5 of CAB still isn't available in the States in
English - correct me if I'm wrong ...
I don't think ASH wants to keep the software for the German speaking public
only, but they're a German company and they're not as big as M$ - which means
translating the software is a matter of time and money for a small company as
ASH. Hasn't ASH any good partners in the States or in the UK which care for
translations of the products?
You have to ask ASH about that, I'm afraid <:-/

H> speaking public only? And how much will the package cost?

ASH-CAB 2.6 + Fiffi (FTP) + PPP-Connect DM 69.--
ASH-Emailer 1.0 DM 69.--
Each will cost DM 49.-- if you're an ASH- Poweruser (if you're registered at
ASH with another one of their products).

I also have a crashing problem with STinG. I was one of the people that the ping problem before. I have no problems if I use the dialers internal clients (ping, resolve, traceroute) but when I try to use any other client (CAB, NEWSie, etc) STinG crashes with either an address or a bus error right after resolving the ip address. This happens under both plain TOS 2.06 and Geneva on my MegaSTE.

Note: the page is called HARDWARE.HTM !!!!!

>The page doesn't yet exist in english, but nevertheless I counsel to
>try this fantastic program ! Try it now !

Yes. This program is certainly very pretty! It has excellent graphics.

On my machine it took about 45 secs. to start up. I thought it was
looping! No --- it was diagnosing the system.

There are probably a few faults remaining in it. It told me that my
ROM was 'ESPAGNOL'.

Despite what it says - 'for Falcon 030', - it worked OK on my TT.

It displays rather less than PROFILE or SYSINFO but the graphical
output is very impressive.

Persist with STiNG! Maybe Geneva is your problem. Under Magic it is
absolutely reliable and gives good tranfer rates. I can use it with my
ISP as SLIP or PPP with no noticeable difference.

I have had generally good success dealing with Toad -- no delays or bad disks at all. Jennifer is the only one left who knows Atari so if you speak to one of the other sales people, they might be at a loss to help you. I may have an advantage over the other posters in that I live in the same state (MD) just about an hour away so I do most of my business in person. About year ago, much of the Atari stuff was relegated to a back room, otherthan current ASH products and some others. It was supposed to be organized but haven't been back since.

Hi Jo,
Some simple points. You must boot the Mac O/S. You can strip most of the extension and control panels however.
MCM runs faster than the Mac O/S on most Macs, is very clean and stable. Much more so than on the Falcon, IMHO.
No less than 16mb of memory, 32mb recommended for any type of serious work. Get NVDI for MagiC Mac too, not so much for the speed, but font support and color support above 8bit.
I have it installed on a Quadra 900 /040@50Mhz and a Quadra 840 AV at 44Mhz. I wish I had the cash for a nice laptop:(.

> to setup these files correctly? (or even better, an ftp site that has this
> demo in .LZH or .ZIP format?) Thanks in advance for your help! ;)

Hi Ronald,

I don't know what the Eurodemo is, but I have a utility called Megafli
that produces this kind of files. In fact, Megafli is a file splitter
: its purpose is to cut large files in shorter files, to fit on
diskettes for example. A file called test.zip, size 3.5 MB, would be
cut in test.000, test.001 and test.002. Test.000 and test.001 would be
1.4 MB and the later 0.7 MB.

See what I mean ? Look at your files, it may be something like that.
Of course, Megafli can reassemble the files it cut. Megafli is a
french TTP (with english docs). You can also find Splitter which is
another splitter (!).

Try this. If it works, tell us what the Eurodemo looks like...

Setting STinG up is pretty easy now too. I got the impression people called it difficult because they did not succeed when coming across one of it's recently fixed bugs. They then blamed it on the complexity of the program instead of recognizing it's a bug. I agree the latter distinction is not an easy one for a newbie. But you must have read some messages in this newsgroups (and I got quite a few in personal mail too) stating the author managed to get STinG working on the first attempt, taking 10 minutes including reading the corresponding parts of the docs, while saying they had not got any experience in networking either.

It's sad some people fostered that impression of STinG, made me think it might have been a better idea to get it as (virtually) bugfree as it is nowadays, before releasing it. But I'm sure not many people would agree.

> , but you could only use
> WWW. Now you can use all the important internet-services (ok, I hope they get

Without even a telnet client, this is a ridiculous statement.

> I just wanted to do the same. PPP now works for both the ISP's I
> regularly use.
>
> I am, however, curious. What was the problem that held us all up?

As apparently many want to know, ...

When I wrote the code that does the PPP packet framing I included the code
for the option to transmit the shorter version of the PPP subprotocol code
(i.e. PPP_LCP, PPP_PAP, PPP_IPCP, PPP_IP, PPP_VJ_CIP, PPP_VJ_UIP), that only
consists of the lower byte when the actual code is smaller than 256 (which
holds for the data protocols, not the control protocols). This is an option,
that needs to be negotiated, but the negotiation code wasn't there at that
stage. So I didn't know how the 'if' statement, that would check whether the
option has been negotiated, should look like when I wrote the framing code.

Later, when I wrote the negotiation, I forgot to add that 'if' statement. As
the consequence, the code would suppress the leading zero (high byte of the
protocol code) for the data protocols, even if the ISP's PPP implementation
was so little sophisticated that it won't support (and negotiate) that option.
Thus data packets were discarded on the ISP's end, because since their PPP
did not support the option it decided the packet were invalid. The login
worked properly because the login only involves control protocols, the code
for which cannot be shortened this way.

This never caused problems for me and many others, because my ISP's PPP does
know how to handle packets with shortened protocol code. Others ISPs, like
yours, use a PPP implementation that doesn't, thus you ran into trouble.

The first fix that I've send to some people for checking would just send the
leading zero in any case. The version on my web page now does the leading
zero suppression precisely if it has been negotiated. Additionally, the latter
version now negotiates and handles Address and Control Field Compression,
which is somewhat related to the shortening of the protocol code.

Maybe you're using an older CAB.OVL, one of those that weren't very stable.
CAB's 'About' form will show you the OVL's version number. It should be 1.25
or higher (V1.2618, V1.2619, V1.2703, V1.2704).

It's also possible that it's STiK causing your trouble. You can try STinG as
a more stable replacement. Find it on my web page.

> Also much trouble getting connection to www.yahoo.com - often timed out and
> dumped to the desktop after much flashing of lights...

This also suggests that it's not CAB, but either CAB.OVL or STiK.

where CAN one find that latest version of CAB.OVL? This is the
second time I've heard of it today, but none of the Pages I usually
check for these has it.

>It's also possible that it's STiK causing your trouble. You can try STinG as
>a more stable replacement. Find it on my web page.

I'm quite pleased with how STiNG works, although I'm having some
problems with the new modules (the previous batch work OK). But it is
quite stable in operation.

BTW, the reason you haven't gotten my postcard yet is due to Canada
Post conveniently going on strike, and the Canadian government
threatening to legislate them back to work and sending their leaders to
jail if they go through with their threats to close down the
Trans-Canada Highway and all our airports (just heard this on the
news). I'm going to make that TWO postcards once the strike is settled :)

Hmm, only reason I can think of ATM is that you use a mix of binaries from
different stages of the STinG development. Have you got the latest set of
binaries, which is a clean combination ?

Precisely the same setup as you describe works well for me.

Do the problems occur too, if you have STinG desactivated ("STinG Internals"
CPX) while doing normal (non-networking) work with your machine ?

Some programs hanging themselves into the privilege violation vector and
not following Atari's XBRA specification will cause problems, if booted
after STinG. Thus I suggest to check if the problems are still there if no
resident tools are booted (AUTO programs or accessories). The problems
should go away then. Then, try to boot STinG as the last item in the AUTO
folder. I can well imagine that Geneva might be such a non-compliant vector-
bender.

The problem is not Geneva, at least not in my experience. STinG and
all the clients work great here under Geneva/NeoDesk.

The latest upgrade fixed PPP but I have been using STinG with CSlip
for months.

I in a BIG need for spare parts of this superb computer.. I'll buy them from
you, If you have some...

I need,

TT mem board (free editable card for 72pin's SIMM's)
TT STmem board (same as prev. board)
TT SCSI 2 chip (mine refuses service)
TT VME cage
TT housage (incl cables from the SERIAL conectors...)
TT Keyboard

If you have one of the above, netmail me with your price...

Thank's

Barry

Hi Charlie,
It's probably a Mega ST or Mega STe keyboard. You can use it for a normal ST too (or a Falcon or TT for that matter), since the keyboard and keyboard processor is exactly the same in all of these machines - you only need to make an adapter cable...

Best regards,
Claes

3231. Cab 2.5 problem?

Newsgroup: comp.sys.atari.st
Date: 1997-11-30 00:00:00 UTC
From: cjohns@yplace.demon.co.uk
Message-ID: <880848116_OASIS_@yplace.demon.co.uk>
Source record: 112809

I'm using CAB 2.5 with stiK and quite often get shut out by 'runtime errors'
e.g. 163 at offset $000B2F96 - sometimes different values. What does this mean
-I mean is it just in the normal run of internet access, or is there possibly
some error in the setup I have.
Also much trouble getting connection to www.yahoo.com - often timed out and
dumped to the desktop after much flashing of lights...

Falcon 030 4 meg ram, VGA @ 800x600 (Videlity), Fujitsu520HD, 56k modem.
Very grateful for any suggestions.

11-29-97 >>>>>> [][] Clearence Sale [][] <<<<<< 11-29-97

If it's not listed, it's been sold!

Will trade for Jaguar and/or Atari Computer items!

(Email me with what you are willing to trade and what you want)

PLEASE: When you send me email - MAKE SURE you either include a valid
email address or that 'reply to' is correct!!!! Quite a few
people have replied to these add's, but I can't reply to most
of them, as the mail comes back to me. thank you....

Item : COMPLETE External Hard drive setup
Host Type: ICD Link
Megabytes: ~90mb formated
Type Case: Plus Impulse flat case
~ size : 13"(width) 2.5"(height) 14.5"(depth)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $125 + shipping

I'll be happy to load the hard drive with shareware/pd software.

AND AS A BONUS, I'LL THROW IN AN NEC SINGLE SPEED EXTERNAL CD-ROM
(A $30 value right now)

M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - MAKE ME AN OFFER!

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Items : TOS 1.04 (6 chip set)
Comments: One bad chip in the set. So if you have a bad one, this might get you going again!

Item : Vidi ST w/manual and software
Comments: Lets you take mono images from your VCR

Item : Monitor Master
Comments: Lets you hook up 2 monitors and switch between them w/o unhooking anything.

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything to RAM or a file. (Not the best explanation, but best I can do)

Items : Video Master
Comments: Allows you to take color (?) snapshots from your VCR

Items : Programming Material [All ENGLISH]

Thomas,

I have heard that System Solutions, the english language distributor for CAB 2.5, needed to do a second printing to get copies for the U.s.

A little bird told me that they should be hitting shores on this side quite shortly.

I don't know if it is a good sign or not that the first run was gone so quickly. I guess only time will tell.

Joe Mirando @ STReport

Bonjour Nick,

Thanx. Let's see,hmmm, CAB,WENSuite,DRACONIS. Not exactly MacSoup, eh <g>.
Well, I play with WENSuite because it's pppLink does work with one of my
ISP's. Most don't have a clue as WS doesn't support VJHC as far as the new
docs say. It does help that it now has an English rsc, but nothing in the
docs mention what's bugging me. Sending/Editing mail and news ;(Someone
decided not to include that piece of info. However, what is more curious,
is that OXO released a English demo at all, then didn't mention it here.
Anyway, it has a lot of features I like, but you have to discover'em ala
carte,uno by uno.

The flame stuff was just a joke, as someone mention that fr.comp.sys.atari
was a semi-battleground <g>.

C'est la Vie,

Charles

I know, I know... I'm using a mac SE/30 at the moment for internet, but
I hate it. It has an 16Mhz 030, but all seems so sluggish. I just
haven't had to much time to fiddle with Sting, Newsie, Wensuite, etc...
Or at least the little time I did spend only ended up in lost phone
communication. Now that there are new versions, I have to get around to
try again, but seriously, I'm waiting to get a HD to speed all this up.
.

>Is anybody using an IBM or Western Digital SCSI hard drive for audio
>recording on the Falcon? How about Syquest's "Syjet" (1.5 gig
>removeable cartridge drive)? If so, how well do they work?

Nope, the Syjet should work as some people use Jazz dives. One thing to look
for is a quiet drive. I hear the Syquest is a little noisy as is the Jazz.

I use a Microp AV drive (4.3 gig 7200rpm) at 7200rpm, it makes a high pitch wh
whine :-(. My old Microp 1gig (5400rpm) was real quiet.

To quiet computer systems check out http://www.silentsystems.com

Rich

3239. Free games for ST/E/Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-11-30 00:00:00 UTC
From: kjellil@online.no
Message-ID: <65re71$1pt$1@news1.sol.no>
Source record: 112817

You will find two free games for Atari ST/E/Falcon at:
http://home.sol.no/~kjellil/

You will also find a demo and some slideshows from the
demo group NETWORK.

Phantom Slayer

About this game

Phantom Slayer is based on the Dragon 32 Phantom Slayer game, but
it is a bit more advanced than the Dragon game. (i started adding
some small features, and then i added some more, and more ect...)

The Dragon 32 version was programmed by Ken Kalish and published
by Microdeal a century ago (in computer terms). I have also seen
it on other systems under names like 'Ghost Hunt' and
'Catacombes'.

I have kept everything down to a minimum in this game sins it was
meant to be situated in arcade halls in a SF-Pirates game i
am (was?) making, so everything works within the limits given by
the main game (called Corcon VII).

SAVIOURS OF HOPE

Saviours of Hope is a RPG based puzzle game
where you guide four heroes through 21 levels of
brain twisting tasks.

The game differs from other games in many aspects:

You can't die
You can freely access any level
Each level score is saved individually
You can restart as many times as you want
No time limit

Four different characters!
Special weapons and spells for each character
More than one puzzle idea! (that's a new one)
Both individual and team based puzzles
Hidden treasures
The Game world can be viewed from four directions
Resizeable playscreen for slow machines
Triple overlaid game world gfx (768 blocks!)
Cool colourful world
It won't eat up your HD

It's FREE! No license, no nothing!
It's GOOD!Best puzzle game ever!
It's HARD!Mensa rejects beware!
It's SMALL! 189 kb Zip file only!

I've read in the French newsgroup someone having a similar problem.
He's got a 'qwertz' keyboard.

> Even if I re-install an old v2 Magic I still get the bad mappings.

So perhaps is there a file somewhere in the Magic folders for the
keyboard mapping ?

What CAB.OVL are you using? Use v1.2618, and not ASH's. Yahoo works fine
with the CAB demo and that OVL, so it's definitely a setup problem. A new
CAB.OVL for STiK has been released (v1.2704), but I haven't tried it yet
(it's supposed to support Authorization and some of HTTP 1.1). Are you
running HSMODEM? Is your proxy set for Demon? It could be a number of
things causing CAB to generate those errors (which rarely appear on my
setup).

Being in the UK, at least you can get CAB 2.5 <g>.

Hi All

I think the origional newdesk.inf files suffer from a size barrier
which causes problems.

Personally on the TT i use magic and Nvdi works brilliantly really
stable. SpeedoGDOS is full of bugs and slow. MagiC is so stable and
fast. I tried Multitos it always caused problems and went to MagiC.
Cab runs fine in 16 colours.

> TT030 prone to it as well?

BTW it was more a question than an assertion.

I've some odd problems that I cannot reproduce all the time, like
frozen desktop when hanging on the modem in STinG on plain Tos, bus
errors in Cab on MultiTos, etc... and I'm suspecting something wrong
somewhere in my config/setup more than in the progs themselves. I've
been told that a deskicon.rsc file greater than 64 kB could cause some
troubles though I'm not sure at all.

I don't no, for me that looks like a problem with the cab cache.
On my falcon i found the same problem last week, exactly the same adress.

After deleting the hole cache, that trouble do not disapears again.
I got that runtime error while i was online and cab decode a picture..

I hope that helps.

>For some strange reason the left soundchannel is dead (well not completely,
>there is some sound if I set the volume to maximum, but it is extremely
>distorted)

Yeah, that fuck we got with 'some' falcons...

First check the connector backside, sometimes it's enough to pic the clamps
in the connector and move them a bit into the middle., but very carefully!!
Switch of before you put anything into the plugs!!

Otherways you have to dismantle your falcon..
Check capacitors below the mainboard..
Most of the relevant parts ar on the lower side of the mainboard.. :/

>If anyone have any sollutions to the problem PLEASE help me! I'm desperate!

The next point, take DOITF030 HTML V 5.9, so you will found a description
of the hole sound subsystem and some great repair tips. A negative point..
It' s mostly in german.. (Somebody like to translate it?)

Regards, Robert

Yes, I think this sub-menu is a good idea, Jo. The Utils section is
very large and needed splitting up.

One suggestion :-) ..... why not call it 'Archivers' (or Packers)
rather than 'Archives'? I was looking for the recent LZH but, at first
guess, thought that 'Archives' meant 'lots of old stuff'!!

Me, too, Pascal. STinG is causing crashes, including under plain TOS 3.06. My SLIP connections cause bus errors within clients (like fetching news articles in NEWSie). Sometimes when STinG initially connects, my system reboots violently. Under Geneva, the same SCR/CFG setup does even stranger things. Complete STinG re-installs and re-ordering of auto programs didn't help. All the latest files, too. A previous version of STinG worked fine for me in SLIP mode, under both plain TOS and Geneva, so somehow the gremlins have got me again. Weird... with PPP, I can't resolve any hostnames, yet under SLIP the nameservers work fine. With plain TOS, I can negotiate a PPP connection; with Geneva resident I can't get past the initialisation stage (this using exactly the same SCR/CFG files). STiK, which I normally use, runs great, though. I'm going to work on troubleshooting a bit more, but I've already spent a considerable amount of time at that already.

BTW I've no problems like this under plain tos 4.04. STinG is great
for me. Works fine with ppp (I have no choice). Though I've not tried
it yet under MultiTos where the problems lies. I don't know why but I'm
no more able to run Cab/MintNet...

But I'll soon be a proud owner of Magic, so...

Oh! And was that anything to do with Magic?

>> Even if I re-install an old v2 Magic I still get the bad mappings.
>
>So perhaps is there a file somewhere in the Magic folders for the
>keyboard mapping ?

Yup, I've had a look. All I can find is a string in the MAGIC,RAM
binary which says 'testatur tabellen' (keyboard tables) but I've no
idea what it's for.

But maybe this is just misleading as I get wrong character mapping
even when using plain TOS 3.06.

Uwe's BOOTCONF tells me the K'bd is set to 'GB' - I wish the hardware
believed that!

Well this hasn't got much to do with the above, but I would think
that using Texel would be the ideal solution for pages like this!

I just read AC and they apparently thought it was great for this
kind of stuff as Texel can save in html format and it's much esier
to handle this kind of info in a spreadsheet. You will also get
nice tables. Also with version 2 you can use scripts which should
make it very powerfull indeed.

Just to let you know. :-)

3261. How to connect a Zip-drive to my TT?

Newsgroup: comp.sys.atari.st
Date: 1997-12-01 00:00:00 UTC
From: cwesterh
Message-ID: <34828d7a.143247900@news.utrecht.nl.net>
Source record: 112639

I bought a SCSI Zip-drive and wanted to put it on my TT. But it is not seen by him. I am using ICD-pro 6.5.5 as a driver. I gave the Zip id 6 and sometimes (when I disable termination) when I run idcheck it takes longer to pass id 6, but it is never seen. Has anybody an idea what could be the problem? It would be nice if it is solved soon, because I also bought a bigger harddisk (going from 350 MB to 1 GB). And I would not like to use floppies to transfer my data.

Thanks in advance,

Cecil Westerhoff.

No, with STinG resident but not activated, things are very stable when non-networking. This under both 3.06 and Geneva.

>Some programs hanging themselves into the privilege violation vector and
>not following Atari's XBRA specification will cause problems, if booted
>after STinG. Thus I suggest to check if the problems are still there if no
>resident tools are booted (AUTO programs or accessories). The problems
>should go away then. Then, try to boot STinG as the last item in the AUTO
>folder. I can well imagine that Geneva might be such a non-compliant vector-
>bender.

You must remember I had an older version of STinG running fine under Geneva. And I run very few auto programs and accessories. STinG is the last to boot. I tried again tonight, and with SLIP I could actually retrieve a newsgroup overview file (xover.txt). But trying to retrieve an article caused a bus error. While connected, when poking around STinG's menus (CPXs, Dialer), the parameters all seem to be OK (those that I understand). The violent dialer crashes mentioned earlier never occurred with this re-install. During boot-up I see HSMODEM and STinG's modules install correctly. I even tried a different serial port (MFP) with the same results.

So, I'm assuming my system is stable (with Geneva, more so). Barring the other problems, what mystifies me the most is that Geneva is interferring with initialising a PPP connection, yet under the same setup, TOS 3.06 initialises PPP fine.

But let's forget Geneva altogether. The key is that on my setup -- with no Geneva -- STinG doesn't quite work. The only thing I never disabled during tests was the video driver, although I tried different running orders of it.

There's a Mega 2/SM124 sitting in my closet. In the next few days I'll
drag it out and try STinG on bare TOS 1.02.

Croft Soft Press Release
1 December 1997

Mole Mayhem Now Falcon Compatible...

A new fully Falcon compatible version of Mole Mayhem is now available. For users who have downloaded earlier versions, a patch is now on the Croft Soft web page.

For those who have yet to download the game, the current archive now contains the patched version.

A number of small bugs have also been fixed, so even if you're not a Falcon owner the patch is still recommended.

Talking about webbrowsers, has anyone tried Dracanos web browser? I just
tried it under STonX and it looks very promissing indeed! I was realy
suprised to see it work so well even under STonX. It handles frames
and you can even scroll and continue doing other stuff while it decodes
pictures and it all looks realy great. It will be very interresting
to see how it will develop but it already works realy realy good,
atleast ofline under STonX.

Maybe CAB has finaly got some competition? Also if this new browser
will support some kind of Java we have got a winner.

3267. Need help with GNU C/C++

Newsgroup: comp.sys.atari.st
Date: 1997-12-01 00:00:00 UTC
From: Gregory@browng.demon.co.uk
Message-ID: <880983912_OASIS_NEWS@browng.demon.co.uk>
Source record: 112645

Hi,
I am using GNU C ver 2.3.3 on my Falcon (using MAGIC) and have the
following problems :

1. Can't seem to use floating points, It compiles OK, but I have
a 68000 exception error on running.

2. Can't get any C++ programs to compile.

The C Library's and includes I am using is PatchLevel 98.

The C++ Library's and includes are PatchLevel 20.

I am also using GNUSHELL 1.54.

Any help or advice will be much appreciated.

Thanks in advance.

Greg B.

I'll assume you have the Zip drive on the SCSI connector, not the ACSI
connector. If this is the case the drive should show up as ID #14
(The ACSI connector uses ids 0-7, and the SCSI connector uses 8-15).
Make sure that you do not have this set to be skipped by the ICD
software.

Brian

>make it very powerfull indeed.

Yes, but until now Texel does NOT allow extending cells to another
one, in other words it is not yet possible to use one large cell above
two little ... So it's absolutely useless in my case ... but I'm very
confident in the coming updates of Texel and the version 2 should be
ready to sell at the french big atari Paris show at the end of this
week ! ASF will be there with the translated program in french ...
until now I had to use the program in german ... a pity and a hell
because I'm not very good in german !

Nevertheless thank you Magnus !

Hmm...hope its the same for Chro-Magic, I've got it pre-ordered thru
them. Thanks for the info! BTW, in regards to the original subject, I
tried the CAB_OVL v1.27 and authorisation works now. With Cab v1.5 I
did get occasional "timout #119" errors. Anyone know what this means?
This was with the v1.27 '030 OVL on my Falcon...

>Sounds great, but where is it available? I tried all the official

If I use v1.2618 with my version of CAB 1.5, I get a lot of "timout #119"
errors. If I use v1.25, everything works fine. I did download the new OVL
from http://www.netset.com/~baldrick/ (version 1.27) and it does work, even
authorisation. However, using the '030 version of this OVL with CAB 1.5, I
still get the timeout errors. Any ideas about this, anyone? (the docs do
say there are problems with some versions of CAB 1.5, and that it does not
happen with commercial versions) :)

>--------------fredd-----------------

Frederic, I did this. Found the Splitter program on Umich under Utils. Worked fine, put all 3 files back together. (did 2 bomb-error on exit with my Falcon though). Anyways, I'm a little disappointed in the demo. Its 1 color pic at the start, than B&W animation/video for the rest of the demo. Its got a strong theme (war, death, human suffering) but after being used to Demos like the Lost Blubb, Joint Venture, Siliconcarne, Hydroxyd, etc, etc, its just hard to compare. Sure can't figure out why it needed a math chip either. (big file too-almost 1.5 megs) Oh well.

Thanks for your help! :)

3276. Atarian needs HELP!

Newsgroup: comp.sys.atari.st
Date: 1997-12-01 00:00:00 UTC
From: callen@vcn.bc.ca
Message-ID: <65ui97$o1@milo.vcn.bc.ca>
Source record: 112654

To any ATARI ST owners
""""""""""""""""""""""

Hi, my name is Christopher and I'm posting this document to see if there are any Atarians out there in the cyber space area, who may be able to help me figure out why I can't unzip my downloaded Atari zipfiles from some of the Atari websites, or if anyone is connected to a Unix system and uses Antic's "FLASH" (any version) telecommunication program, maybe you can tell me how you have configurated Flash to properly operate with the Unix system. This may be the problem with my zipfile downloads. I am by no means a computer wiz, but I think my problem lies in the transfer of Bad CRC's and Invalid Zipfile Headers. The question is WHY is it happening and HOW do I fix it? That's my problem to "maybe" this problem.

I belong to the Vancouver CommunityNet which uses the "UNIX(r) system V Release 4.0" with the "Pine" (version 3.95) e-mail program, "Lynx" (version 2.6) text browser, and the "Pico" text editor. I was using "Webcrawler" to find the Atari websites. My Atari stuff may be slow and old, but it works just fine. I don't know if the rest of the following information will help you to figure out my problem or not, but here it is anyways.

I am using an ATARI MEGA ST2 with a SC1224 colour monitor (low/medium resolution,I use medium) and a "now" very, very slow Atari SX212 modem. My telecommunication program is the old Antic "Flash" version 1.52 (c) 1986, which I may have configurated wrong, I'm not sure. I could also have the configuration file in Lynx set up the wrong way to, but I've had no trouble downloading ASCII or TOS files, just the zipfiles after I've downloaded them. I even tried downloading the same zipfiles on my friends computer (IBM) using "Windows 95" and "Netscape", and came up with the same results.

My terminal is set to: vt100 [ASCII], FULL Duplex, Echo [OFF], Linefeed [Off], Strip High Bit [ON] (I've tried off as well), and the Translation table is [ON] when using the buffer and does not effect Xmodem transfers.

The RS232 Configuration is: 1200 Baud, 8 Bits, No parity, and 1 Stop bit as requested by the Vancouver CommunityNet.

My ASCII settings are: 1 Line pause, DC2/4 Protocol [OFF], Strip Linefeeds [ON], Metering [ON], Prompting [OFF], and [NO] Prompting character.

The Xmodem parameters are set to: [REGULAR] Transfer Type (also tried 8/CRC), [1 K-byte] Block size (also tried 128 bytes), LOOSE timing, and [Ctrl-Z] Pad last block. I've also tried [Size Byte] (NO padding).

For Zmodem downloads only with verbose (debugging) to screen, I'm executing another program within "Flash" called "XYZ.TTP" by Alan Hamilton (c) 1989, which also does X and Ymodem downloads. I have tried downloading with Zmodem and both Xmodem transfers in each program, stating the file names as I should without any luck on zipfiles.

What follows below, is an example of the exact information I see when downloading a zipfile when using Lynx. First, here's a program I downloaded using the Xmodem CRC option in Lynx and the download Xmodem transfer in Flash. I had no problem downloading and reading the "Zmdm16.doc" file.

1. WEB LINK INFO SCREEN

ZMDM16 V1.6
Zmdm is another ZModem program derived from rz/sz for Unix and
possible to run at 38.4K or higher bps.

+ [11]Zmdm16.zip 138256 bytes
+ [12]Zmdm16.doc 380 bytes

2. LYNX DOWNLOAD INFO SCREEN
---

* Lynx info lines when downloading the zipfile using Xmodem CRC.

Sending/tmp/Lynx.sx.26765/zmdm16.zip 1081 XMODEM blocks. Start your
local XMODEM recieve.
C
3. UNZIP PROGRAM INFO SCREEN (Atari GEM)
---

* ST Unzip info message after it has or hasn't uncompressed the file.
NOTE: The input/output bytes and bad CRC information changes with each
zipfile. This info is the "zndm16.zip" file

Buffer - (input --> 475197 bytes) (output --> 321761 bytes)

Unknown compression method. Bad CRC f6ca2178 (should be 00000000)
Invalid Zipfile Header.

press any key to continue.

4. ATARI (GEM) DESKTOP INFO SCREEN
---

* Info after using ST Unzip. I've added 2 another zipfile as well.

ZMDM16 ZIP 138266 (Date & Time)
COFFEE/P 56497 " "
COFFEE ZIP 34410 " "
ZMDM16/D PRG 33409 " "
UNZIP TTP 21747 " "
PC_ST/AT EXE 6471 " "
PC_ST ZIP 5530 " "

I've been trying to uncompress my downloaded zipfiles with the ST Unzip utility program (version 1.2) by S.H. Smith (c) 1989. Some of the zipfiles seem to uncompress. It is obvious by the byte size that the "ZMDM16/D.PRG" didn't uncompress properly. I also added two other ZIPfiles to the example above, which might have uncompressed properly because of the byte size. Notice the parameter names of the uncompressed programs. On an Atari St you can"t type a "/" on a file or item selector info line, whatever the "/P, /D and /AT" mean. Also notice that the "COFFEE/P" has no file extender to tell you what kind of application is needed to run the program and what's EXE? It looks like programs for a PC, not an Atari. These zipfiles were downloaded from Atari websites.

I also get the message "TOS error #35" after double clicking on the uncompressed programs. This is because something is wrong with the program of course, and what does "TOS error #35 mean, and is "TOS similar to "DOS" or can it even be used on an ATARI ST? This could be part of my download problem as well or maybe there's something with the ST Unzip program itself. Who knows? I've yet to find an uncompressed version of ST Unzip on the web. Most of the files out there are all zipped. What ever happened to the good old ARCX program. I just don't know what to do anymore. I'm at my wits end. HELLLLP, I've fallen down and I can't get unzipped!

I don't know if any of this information was useful or not, but it's the only way I know how to explain my problem, and I do THANK YOU kindly for reading my rather lengthy plea. If you can help me by offering any suggestions or solutions to this frustrating zipfile caper, I would greatly appreciate it.

You can contact me by e-mail, or give me a call if you happen to live or be in the Vancouver, BC, Canada area. If you would also like to share or trade any Atari programs or games via attached to e-mail, let me know. We can also download directly by modem to each others computer if you live in Vancouver, BC, because I can't afford the long distance charges.

I have to many files to tell you what I have right now, this document is long enough as it is. If you're interested in a certain program or game that I may have, just ask. I shall do the same. My utility programs will work on any ST, but some of my productivity programs and all my games are for COLOUR MONITORS only (low/medium resolution), except for a good old (mono) Breakout game.

I do have a few monochrome programs, including one called "BIGCOLOR" that turns your monochrome screen into a workable low/medium screen. This means you can run low and medium resolution programs on your monochrome, though, your screen action may slow down. I'm not sure about that, because I can't use the program with my colour monitor. The program I use does the opposite and does slow down the screen action, but the monochrome programs still work. I also have a bunch of "STart" Atari monthly disks published by Antic inc.. They're loaded with all kinds of ARC files and stuff. Well...I guess I had better stop writing now, so I can hopfully hear from someone out there soon. See ya!

Thanks again, from a Faithful Atarian,

Christopher Allen

> I'm interested in buying some software from Toad Computers, but before I do,
> I want to know that they won't try to cheat me. Has anyone else here dealt
> with them in the past?

When I have ordered from them inthe past, I've had no problems, BUT, tat's
been over a year now since I've dealt with them.

A friend of mine, over a year ago, ordered Magic 5 from them, as an update
to his Magic 4. e is STILL waiting for his update, and he really wants to
get his disks back(You have to send in your original disks to get an
update), so that he can order it directlyfrom England.

Take your chances, and if you do, I hope the best for you. I am, for some
odd reason, still on their mailing lost, and it's been a long time since
I've seen something atari related in the e-mails:(

First of all,Sting with PPP is really working well for me.
Except for the FTP which I think is slow compared to STIK
That may well be due to the configuration I have done.
Does anyone which of the settings affects the FTP-speed,
if there is one specific for that function.

3283. SoundPool Audio Tracker Problem

Newsgroup: comp.sys.atari.st
Date: 1997-12-01 00:00:00 UTC
From: Stephane LANDIER <s.landier@lectra.com>
Message-ID: <34820945.BE2E7DC4@lectra.com>
Source record: 112661

Hi !

I have a 4Mb Falcon, Tos 4.04, 80Mb IDE HD, almost empty Auto Folder and CBHD driver. OI know the HD is not suitable for serious work, but before I inverst in a SCSI Ext HD, I want to be sure to have the proper software.

When I create a tape in Audio Tracker, it seems to go well until the moment when the programs "closes" the file. I then get a request to insert a floppy in drive B. Whatever floppy I insert, it still gives me an error. Please note that I am running the Demo version, so it is not the copy protection !

Also, I have another stupid question : How do I swithc from CBHD to AHDI without reformating my HD ?

Thanks,

Steph

Seven Words:

New 68040 Clone, not ready to sell.

(PCI) But i think you saw the technical data on the 'Milan Page'
I saw that thing at the last atari fair in neuss/germany.

A snow white desktop and tree atari standard icons..
(Looks like a simple 260ST in the case) ;->>
But the reset button and the following 'milan' logo on the screen works fine..

It was to early to present that machine.
A new machine must be shown with a handfull of standard
software was evrybody had on his own atari..

It's also to early to lost only one word abbout.
Software makes buyers..

More intressed was that MagiC works on a older clone!

Regards, Robert

Not at all. Don't confuse the API with the underlying implementation. I don't care whether or not you like or use MiNT or MiNTnet. But if you want to be able to bring networking software into play quickly, you should be using a standard network API. Nowhere in my post did I talk about one stack being faster than the other. I spoke only of development time being faster, using the same API that every other network software developer in the world is using.

No, I'm not spoiled by BSD's reputation. I'm a networking engineer; I've implemented at least three different TCP/IP stacks in my career already, including the first port of KA9Q net to the Atari ST 10 years ago and a high speed socket implementation for two flavors of parallel supercomputer. I don't care about a system's reputation; I don't have to. All I care about is how it can be used. Clearly STiK and STiNG are usable, otherwise there wouldn't be so many people using them and singing their praises. But the amount of software available to use with them is tiny in comparison to the network applications and needs out there, and the number of developers actually working on this stuff on the Atari has always been small.

Is the ZIP the only device on the external TT SCSI bus?

If this is the first time you have connected to the external bus you
may need to remove the 3 termination packs inside the TT - just
in front of the SCSI port. These will absorb signals to the bus.

If the ZIP is the only (or last) device on the bus it will need to be
terminated.

I'm not sure about this but it may be that the ZIP does not supply its
own TERMPWR - this may need to be provided by another device on the
bus.

Why not stick you new HD on the bus together with the ZIP. It will be
a good way of transferring your data anyway :-)

ICD is a bit old now. Why not try CBHD?

No - as far as I know STiNG does not care what sort of internet
connection you have.

I guess you are just having the normal problem with ftp sites - they
are very variable. I think it is because they are often part of a university
configuration which gets heavily used and is, probably, not very
carefully managed.

<looooong list of setup info snipped>

One thing that could be causing you trouble, is the very old software
you're using to access the net.

First of all, you probably need the latest version of STZip

Get it from ftp.lip6.fr/pub/atari/Archivers/stzip26.tos

You might want to upgrade your terminal program too. The ftp.lip6.fr
archive is probably one of the best at the moment for freeware/shareware
stuff.

Hey, and it's time to get rid of your 1200 baud modem. I'm sure you can
get an old 14.4K for next to nothing, and it'll run ten times faster
than that old Atari modem.

Oh, and are you sure you are downloading your zip files in binary mode,
not ASCII ? In a text mode FTP client, always type 'bin' before 'get'.

Maybe it's the latter one ? It's not an NVDI derivation, is it ? Any chance
to test the setup without Nova VDI, maybe by using a normal screen with
the Atari video hardware ?

Hello,
I would guess that the problem is a broken soundchip, CODEC or one or more
surface mounted resistors or capacitors. It's hard to say anything specific
without having the machine at hand...
Do you have an oscilloscope? Then you should be able to see where the signal
gets destroyed and locate the broken component.
Check out my homepage for some hints, or mail me if you need help.

>of cubase. Any suggestions?

Hello,
This is something I haven't come across before, but since the analog input on the Falcon isn't very good, I suppose it may recieve noise because of emitted RF (i.e. either the HD or the Falcon - or the cables for that matter - is poorly shielded). I've tried a Jaz too with very good results, but I never use the analog inputs on the Falcon (I always record via my DAT and the S/Pdif interface).
It may help if you place the Jaz a little further away from the computer, or if you exchange your cables to better shielded ones.
Feel free to send more questions to me, and I'll try my best to help you out.

>and when it finally appears, another time I checked an hour after
>posting, and my message WAS there! What gives?!?!? :-/

After posting an article, check your NEWSie log right then and there (while online). I was having trouble posting some articles, too. In these cases it ended up to be a formatting error -- STeno couldn't handle the extra long Reference headers of some threads. My newsserver (via NEWSie's log) reported the error as something to do with 'space-colon' in the header. Installing qed instead of STeno fixed the problem (qed can handle lines greater than 200 characters).

But this only applies to followups, since a new posting's Reference header would be short.

Months ago I was making posts that weren't being circulated (except, it seems, to my own server). I sent my ISP copies of the supposed posts in e-mail with full headers to show that the postings were valid. Later, they changed their configuration so that the postings were passed on to a more reliable newsserver (outside of their own).

On a few occassions, I was getting the log error "throttling message". The key is to check your NEWSie log after doing a post (before the log is reset).

But under plain TOS 3.06, as explained, STinG still causes problems.
Geneva is not the source, although its affects are different. It's either
my SCR/CFG, an auto program conflict, STinG itself, or a combination
thereof. I should elaborate and say that plain TOS 3.06 includes HSMODEM
and Nova's VDI replacement. Geneva 6 works great with STiK, CAB, NEWSie,
Ant Mail, and AFTP. It's most likey something at my end -- but _what_
escapes me.

I shall persist <g>.

>right after resolving the ip address. This happens under both plain
>TOS 2.06 and Geneva on my MegaSTE.

I can use STinG's internal tools, too.

Our problems are similar. For me, for example, I can 'check mail' in Ant
Mail no problem, but if I 'get mail', it crashes attempting to retrieve
the mail. Same with NEWSie: I can log onto my newsserver but the first
article retrieved causes a crash.

It comforts me to know that someone else is having trouble, since everyone
else seems to be having very good results with STinG. But an older SLIP
version of STinG worked great on my system under both TOS 3.06 and Geneva.

What are we doing wrong?

Yes, it is a Mega keyboard. Mouse port is closest to the center, with
a long cable run leading to the right hand side (facing the
computer), joystick port is on the left, with a small notch to guide
the cable through.

Hi,

Many years ago, the Amiga had a game wherein you managed a shipping company. It was similar in concept to "Oil Imperium" on the ST - you had to make business transactions, pilot your vessel, things like that. It might have been called "Port of Call" or something similar. Does anyone know if a port was ever done for the ST, and if so, where I might be able to buy it?

3310. FS/T: Atari ST software [12/01/97] {Christmas season special}

Newsgroup: comp.sys.atari.st
Date: 1997-12-01 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <34887b6e.1232132@nntp.ix.netcom.com>
Source record: 112778

All Video Game Advantage (VGA) FS/T lists are updated every ten days
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *BEFORE*
asking any questions, or placing any orders. Thank you!

This list was last updated on 12/01/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

2nd annual Christmas season special

From 11/06/97 until 12/20/97, all Computer item orders over $50 will
receive a 10% discount.

Computer systems included in this special are Atari 8-bit, Atari ST,
Apple][, C64/C128/Vic-20, IBM, Tandy, TI and all computer printers.
All of these FS/T lists are available on my web site.

NOTE: I am also running specials for other video game and computer
systems. You can find those FS/T lists on my web site.

And yes, this special is starting earlier than last year. Thanks to
the Artman family (see web site) the check clearing period is longer
this year, hence the early start. But its also ending earlier :)

-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-*-=+>&<+=-

SOFTWARE:

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are going to follow through on your order *BEFORE* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

```
Hi all Atarians,

New Beta test version of my mail program MyMAIL (v0.44B)
at my homepage.

http://www2.tripnet.se/~erikhall/index.html (main page)
http://www2.tripnet.se/~erikhall/programs/program.htm (Download page)

Bugfixes and new things in this version
---------------------------------------
- Solved a timeout problem,
when connecting to mailserver for sending a mail the timeout was
calculated wrong after the rewrite in V0.40
- If you is writing a new mail you can top the window by clicking
in the "newmail" icon.
- Fixed a bug in reading of mailsize.
- Window positions are now saved.
- Fixed a bug in opening of mail,
it was able to open a "blank" mail position in inbox window
that only showed the previous viewed mail.
- Fixed problem (bug) with boundary tags and sending attachments to some PC mail clients.
- Fixed problems with recieved mail and attachments from Outlook Express
- Now it is possible to see the mail waiting for download from server.

Message-ID: <880949594.13422@dejanews.com>
Source record: 112782

On 27 Nov 1997 13:11:48, sinclair@marketsource.com wrote:

(MCIBTYC drivel removed)

Well, it looks like the sewers are backing up again - TIFKAS, The Idiot Forever Known As Sinclap (now that he has been booted off another ISP) has decided to reward us with his presence again on comp.sys.atari.st. Except this time, TIFKAS, the advantage is ours! Muahahahaha!

Saids who'm? I still have ps10600@cedarnet.org. More full of sh t...

Remember, folks, one thing TIFKAS hates more than anything is for everyone to ask him logical questions that he can't answer without showing his extreme ignorance. So ask away!

When will you acknowledge that you were wrong about the clones?

And speaking of drivel, let's go on with these questions that Petey-boy still dodges in comp.sys.atari.advocacy:

I will type slowly this time...

1) you claim that Apple is actually turning a profit. How can that be when the fiscal year report shows that Apple LOST ONE BILLION DOLLARS, with $160 MILLION LOST IN THE LAST QUARTER ALONE?
--- Lets put this in perspective: $500 million was written off when Apple bought Next.. Secondly, the remaining loss was due in setting aside charge reserves for restructuring activity and the remainder is an operating loss.

Most of the 161 million loss was due to the fact that Apple wrote off the purchase of Power Computing's Mac OS liscence for $100 million. The remaining loss was in setting aside 61 million for future restructuring activities..

Apple created $200 million in cash creation after paying off a $200 million bank loan. Apple created the positive cash flow from inventory runs and investments..

2) you claim that Apple is stable. Why, then, did a well-respected company accessor recently give Apple a failing grade, and said that they cannot sustain any further losses?
--- At least two financial firms have recommended Apple stock for longterm buy. You

need to look at their balance sheet to see for yourself..
---------- 3) you claim that Apple is still licensing the manufacture of clones.
Other than UMAX's contract which allows them to manufacture Mac clones for the Far East, what are the other companies making clones after December 31st and how did they get past Steve "Arrogant Bonehead (TIFKAS' own words)" Jobs decree of "no more clones". Please provide any documented evidence ("because I told you so" is NOT considered good enough - we want magazines, page numbers, web pages, anything).

Not again!. I will type slowly this time for meaning and clarity.

Apple has licensed Mac OS 8 to Umax. Umax(supermac.com) along with MacTel(mactell.com), Powertools and APS(apstech.com) sell clones in North America. What do you not understand? Try macsurfer.com and deal-mac.com for evidence. Also check out the firms web page as well as MacWareHouse, MacZone, MacConnection, MacClub, MacMall and Cyberian Outpost..

Do you really want me to post the press releases here? I am itching to do so.
---
4) why is Petey-boy so afraid to post any of his Mac "good news" info to comp.sys.mac or comp.sys.mac.advocacy, which have shown nothing of any of TIFKAS' drivel, but the exact opposite? Is it the fact that if he did, he would be reduced to an onion ring within a matter of seconds? :)

I have posted plenty in comp.sys.mac.advocacy.
---
5) you claimed that in one Apple dealership that you could take all the software available there for the Mac and pile them in "12 30-foot piles" (cross-platform titles included). Were they individual titles, or several of the same titles? Were any of the titles in the delete bin? Why, when I went to a couple of well-known computer dealers in Toronto that cater to Mac users could I not visualize "12 30-foot piles" of the software available there? Are you sure that the "12 30-foot piles" are not the copies of MacUser you have in your basement apartment that you frolic through naked every night? :)

Again for meaning and clarity.

I stated that if you were to walk into Best Buy that would be the case. There is a lot of Mac/Win hybrid software in the windows section.

Just remember these things and keep asking them. Be sure to ask him other embarassing questions as well should they crop up. :)

And TIFKAS, I want answers to ALL my questions. Not which ones you feel like answering, ALL of them. Failing to answer even one shows that you are not qualified to speak as an expert either on Apple or on

Atari, and should thereby keep your lip zipped - and proves again that
you are a coward.

When will you admitt that you were wrong about the clones?

SAY YES TO APPLE. SAY YES TO ATARI. JUST SAY NO TO DISINFORMATION
FROM CLUELESS GEEKS WITH NO LIFE WHO ARE TRYING TO SAVE THEIR JOB.

Speak for your self...

Peter S.

> with Dan Ackerman (STiK author) to keep the STiK and STinG APIs compatible.

So stick is still developed? I thought it has stoped and it can't be
very
active can it? It would be sad if slow STiK development holds back STiNG
development as I see STinG as the new defacto standard for TOS users (no
MiNT) and not STiK which is old and outdated if you ask me.

> Actually on this very subject we lack BSD experts in the discussion.

Well I can only say that I'm not! :-)
Sounds like you need someone like Howard on the discussion or just do
what
you think is the best. STiK can then be compatible with STinG isnteed
of
the other way around. I think we all can trust that you know what should
be
done and how it should be done as STinG is a very promessing program
which
you have done a great work with. Also I dobt that STiK will ever get to
the
point there STinG is or will be in the future. For me and I think most
others
STiK is a dead end and STinG is the way to go.

From: ben@imperial.co.uk
Message-ID: <880960706.22478@dejanews.com>
Source record: 112787

Hi,

Yes it is possible to network your Atari to a PC
running Windows 95. How you do it depends on what
you want to do accross the network.

You could setup your PC with an FTP server and transfer
files via FTP through the serial ports on the Atari
and PC. You could even setup NFS (Network File System)
to allow you to map PC drives on to your Atari. This
second option takes time and a lot of resource from your
Atari, but it can be done. Details of Linking an Atari
to PC via NFS can be found on my homepage, provided by
a friendly bloke called Gerry O'Rourke.

Regards,

Ben Hills.

Hey! bales@hol.fr (Nicholas Bales) wasn't it Mon, 1 Dec 1997 23:20:07
+0100 when you wrote:

><looooong list of setup info snipped>

1)
>You might want to upgrade your terminal program too. The ftp.lip6.fr

2)
>Hey, and it's time to get rid of your 1200 baud modem. I'm sure you can

3)
>Oh, and are you sure you are downloading your zip files in binary mode,

4)
>not ASCII ? In a text mode FTP client, always type 'bin' before 'get'.

And heres me thinking the answer to bad zip downloads would be to get
and install the latest version of HSMODEM ? ;-)

.

Hi,

Try PH Player - plays AVR, AU and alot more format on the Falcon.
Download from my site at http://probehouse.home.ml.org
and it's FREE!

Try to install the NT RAS service. You can change the properties of certain ports (RAS port) to accept incoming calls. You will need administration privillage to do this.

With all the positive post, I had to give it a shot. With about a years experience setting up STiNG, it took all of 10 minutes to get a PPP connection:). All the tools work fine on my providers NT server. I could even trace route some spam mail that was sent. What I noticed first was the transfer speed I get with CAB_OVL now. Web pages scream!!! All the clients I tried work just great. I elimated the dial script and just used PAP without any problem.
Another reason to STiK err, (STiNG:) with my Atari:).

A very professional job, Peter.

> or even just a summation of what the page says about it in English?

Well my german ins't much better, but basicly it is a TOS clone with
the following specs:

68040 (I think a 060 version will be available as well)
4 PCI slots
3 ISA slots
4 SIMM slots
2 IDE connectors
PC keyboard connector
Floppy connector
Realtime clock
512kb flash ROM software updatable
1 parallel port
1 MFP compatible serie port
2 PC compatible serie ports

This is basicly the same as the Hades with the same TOS.

They are also working on a PCI card which will make it Falcon
compatible.
There will also be a MIDI card and SCSI card (a regular PCI SCSI card).

The price is realy low, only 1500 DM, less then half the price of the
Hades with the same configuration.

As it comes without MIDI ports as base modell it market to DTP stuff but
the Falcon card will also make it perfect for music stuff.

The price for the Milan with DSP card is said to be around 2000 DM.

The realse date is set to 1Q 1998. I did also see a picture of the
motherboard in ST-Computer and it looked realy nice. Very clean and
compact. They have used standard components from the PC world to keep
the cost down and it looks like they have succeded.

Well, I didn't succeeded to have it to work properly with MultiTos.
Afaik, it do needs preamptive multitaskink to work, so no single Tos.

>to test the setup without Nova VDI, maybe by using a normal screen with
>the Atari video hardware ?

It's a VDI replacement (and a very good one). I still run NVDI but its
screen drivers have to be disabled.

I have my Mega 2 up and running now. It has TOS 1.02 with no hard-drive.
STinG reacts the same on this machine as on the TT, so this rules out any
program or accessory conflicts. The only client I ran on the Mega was
NEWSie. I can check mail, but getting mail crashes with two bombs. I can
get a newsgroup overview file (xover.txt), but getting any article causes
the same crash. I can grab a file through FTP and HTTP (Open URL), though.
This is something I never tried in previous TT tests.

The above was using uncompressed SLIP. For PPP, I couldn't get past
'Initialising Link'. I used the same SCR and CFG files as in previous TT
tests (just the serial port was different).

The Mega setup was this:

A:*.*

```

I dunno what to say. Is it my Linux-based ISP? Something askew in the SCR/CFG files? STinG? Too much THC in my youth?

An afterthought (the Mega is disassembled now to get me back to the TT): would defining POP3 and NNTP servers help? STiK doesn't need them, but maybe STinG does? What's the syntax? The reason I ask is that NEWSie had trouble with my POP3 account (getting mail) and the NNTP server. FTP and HTTP were fine. My news server is news.dsoe.com, but through that it actually connects to another local ISP's news server (thoth.portal.ca). I wonder if this is why I can only get the overview and not any articles?

Correct. My message was maybe not complete clear. I expect to see the
ZIP at ID #14. That I was talking about 6 was because my version of
idcheck displays the ID AND the SCSI ID. As I said when I activate the
terminator, I do not see the ZIP at all. If I disable the terminator,
idcheck needs a lot of time on ID #14 (#6), but does not find
something there. Quit a pity.

Cecil.

Yip, that is because this new release is http 1.1 compliant. :) You can also now get all web sites/domains administered by CyberSTrider - not possible with CAB before (unless you used a proxy server)...

www.cyberstrider.org
www.bhabuta.co.uk
www.cybersitar.net
www.ataricomputing.com

All the above use http 1.1 protocol...

Soundpool reccommend an IDE drive for their Audiotracker software and also supply their own version of the ATARI hard disk driver to improve disk accesses (I believe). It isn't perfect but it works well enough.

Yes, Turtle bay "retired" from the atari bussiness. as well has lexicor.
I know that some 060 card for TT are available but cannot say more because
I don't know where to get the information.

3340. Is the TT suitable for music?

Newsgroup: comp.sys.atari.st
Date: 1997-12-02 00:00:00 UTC
From: David Johnson <djohnson@techline.com>
Message-ID: <34841CD1.3FE2F721@techline.com>
Source record: 112698

Hello,

After becoming frustrated with the timing problems inherent in windows all in one sequencing/recording packages like Logic Audio and Cubase VST, an atari synced up to a DAW is sounding like a good idea.

Since by nature I tend towards overkill, I've found an Atari TT. The dealer assures me that "this is a great music computer." But I know there are compatibility issues with some Atari's.

So my question is, how does the TT stack up as a music computer? Will it run Dr. T's KCS, Logic, Notator or Cubase without crashing?

Which programs will it run?

This is a bit like the chicken and the egg. I bought a ZIP and also cartridges, but these are formated for IBM. I do not succeed in making the ZIP seen by my TT. I use ICD-pro 6.5.5. I could upgrade to HDDriver (and I did understand that it is worth the money), but before I do this, I would like to backup my harddisk to ZIP. Any suggestions?

Cecil.

the only one that won't work (from what I've heard) is Notator -
Cubase and Logic work fine (one of the former TAF presidents is a
teacher and ran Logic on a TT with a large mono monitor, and was quite
pleased with it).

Agenda for Toronto Atari Federation meeting for December 17th, 1997:

ATARI - THE MIDI CHAMP!

The Atari ST computer, the first on the market with standard MIDI ports and intelligently designed software, became the number one choice of recording studios and home recordists throughout the late eighties and early nineties. And today, despite the encroachment of the PC and Mac in the studio enviroment, many artists still rely on their STs for their projects for their relative ease of use and lower system overhead. This TAF meeting will be of especial interest to MIDI users, as there will be demonstrations of the latest incarnation of E Magic Logic (2.5), perhaps one of the best sequencing programs for the Atari on the planet; as well as a demo of a new arpeggiator program from upstart company Electronic Cow. You'll be amazed at just what an Atari is still capable of!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Right, i don't kown any problems between ICD and HDDriver.
It's a jump into cold water..

And with that ICD package you can't see the ZIP Device?
(A ZIP looks like the same as an Harddrive, i think so)

I haven't experienced those timeout errors, I don't think. Unless
you're talking about when it counts down on a very slow system.

I got the 1.2704 OVL and it does seem to work better. I have a
couple sites where I need authorization and it works. The only
problem is it always crashes (MagiC Error #-69) the third time I use
the authorization. IOW, it will take name and password, but then
when I need to use it again, it crashes after sending name. But
clearly it's a work in progress, and hopefully that will be fixed
soon.

>I could use that are compatible with Magic?

I've never had any success changing res with MagiC (5.11) on my Falcon. I usually don't get even as far as you do. It's probably one of my ACCs or something causing a problem. So when I want to change res, I just make sure all my files are closed, go to the change res menu, change the res and save it, then do a Alt-LS-Del or Alt-LS-RS-Del, depending on what I need. That's not real elegant, but it works everytime.

Agreed. When I was having problems with STinG, I just assumed I
didn't have it set up right, at least for a long time, so obviously
the program seemed very complex. But I think if I were to set up the
current version for the first time, it would go very smoothly. When
all was said and done, I really didn't do much to the sample configs
to get it working. What got it working was the fixed versions. ;^)

I would use the program SCSI.PRG to "query" the device. If the device
responds with it's name then it can talk via the SCSI. You can also
use the error number it responds with to help determine the problem.

I no longer have the full set of SCSI commands so I can not help you
very much on this.

Brian
p.s.

You probably do need to remove the terminator strips on the mother board, per Roger Cain's post.

I personally run Logic 2.5 on a 48mhz (Cattamaran accelerated) Atari TT with 19" monochrome monitor. I have Export, LOG3, and Unitor II MIDI expanders, providing a total of 144 possible MIDI output channels and 48 MIDI input channels. So far, no problems... Logic seems to get sluggish late in a song (when it comes to scrubbing and moving around) but normal playback is solid.

The TT is a great machine for sequencing due to its extra speed as well as the ability to use the Export MIDI expander (which the Falcon cannot use). The TT and Falcon are both incompatible with Notator, a terrible mistake on everybody's part, IMHO. If you have decided on Notator, then a Mega STE or accelerated ST is a good choice. Otherwise, a TT should meet your needs quite nicely.

>Is ASH's PPP-connect supposed to work on other platfors than MagiC? I.e.
>TOS/GEM, MiNT...does it need multitasking?

It definitely needs a multitasking system but you're not restricted to
MagiC only. Every pre-emptive multitasking system should work.
I got it working with N.AES/MiNT/Thing. One should be able to get it
working with Geneva/MiNT too but so far I didn't succeeded.
Note: You must use MiNT on top of Geneva because you need a pre-emptive
Multitasking OS. Geneva on it's own is a co-operative OS.

Well, that's nice. However there are a few pages that I still cannot
get. Try http://www.asienhaus.org for instance. You'll see a page that
has something to do with Asia, too, but it's not the requested one.
You may see the difference if you enter the same URL in another Webbrowser.
Netscape a.o. are showing the requested page.
I always understood that it was due to the authorisation problem that
I always got the wrong page (actually it seems to be the webserver of
the requested site). But now when the authorisation problem was solved
I'm a bit dissapointed since the problem still exists.

By the way, when will CAB be able to handle gopher? Or is there another
client able to do that?

Thanks for your answers,

Alex

Hi all!

Think GEMScript will be a new "standard" such as ST-Guide and OLGA. I have
visited the GEMScript homepage
located at http://www.uni-karlsruhe.de/~Thomas.Much/GEMScript/index.html
and downloaded the manual. This is a really serious project.
But, where&#65533;s the freeware scripter interpreter by Holger Weets? and what is
ASH-MagiC scripter? The same app in
a commersial suite? A new MagiC extender?

Please let me know (all of us), I really like the things GEMScript can cope
with.

Done that, and have now narrowed the problem to any calculations performed
with floats, please read source code:

```
#include <stdio.h>

void main(void)
{
double x,y;
y= 1.0;
scanf("%lf",&x);
fflush(stdin);
x += y; /* This calculation causes a crash*/
printf("\n%-.2f ",x);
}
```

This simple program compiles okay but when running it crashes
when it encounters the [X += y] statement. It runs okay when
compiled with Lattice C. Do you know why?

>: 2. Can't get any C++ programs to compile.
>
>I've heard the term "bleeding edge" used to describe g++. That said, a

>Hmm, only reason I can think of ATM is that you use a mix of binaries from
>different stages of the STinG development. Have you got the latest set of
>binaries, which is a clean combination ?

No the binaries are not mixed. I even downloaded all the binaries again
just to make sure. Same results, STinG bombs after resolving the ip address
when using CAB, Newsie, etc. but using the dialers internal clients
everything is fine. I've even tried it with just STinG and the STinG CPX's
loaded, same results.

I have another MegaSTE here but it's unusable right now. It doesn't read
FAT's properly when booted from a hard drive. It will only show 3-4
different directories or files but it shows about a dozen of each. Maybe
this one is starting to go the same way. I do sometimes have problems
after deleting a large quantity of files. And this STinG problem seems to
be a directory changing problem. STinG connects, I run CAB or whatever, CAB
asks for the name to be resolved, it gets resolved and written to the cache,
when control gets handed back to CAB I get the the bus or address error.

3363. CAB 2.5 features

Newsgroup: comp.sys.atari.st
Date: 1997-12-02 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <BVTG4un.greg_evans@delphi.com>
Source record: 112721

Does anyone know what was upgraded in CAB 2.5, other than PP Connect?
For example, does it allow frames to be resized, pages to be scrolled
or links selected while a page is still downloading?

Greg

Sounds like the software and hardware settings don't match. You need to adjust the switches on the scanner and the software settings so that they're in sync.

Sorry, I shouldn't be doing this in pieces...

My TT setup includesTOS 3.06, Geneva/NeoDesk, the Super Nova, NVDI
and HSMODEM and STing, CAB and NEWSie work flawlessly. NEWSie appears
happiest running in ST RAM but that is the only anomally, and even
that is not absolutely necessary.

Neil, maybe one of the files you have has become corrupted in some
way.

Again, great job, Peter!

So this means the fault must be either your software (STinG or clients), or your ISP. Normally, the ISP should not be able to crash the setup, regardless what they do. So maybe some corrupted file ? Did you say in the other message you downloaded a fresh copy and reinstalled it ?

One thing you could try is packing the very disk you used with the Mega ST into an archive, and send it to me. I'll then try to run it here. Include the client that consistently produces crashes, and add a README describing how to get into the situation where it would bomb.

Cheers Peter

If you use STinG, try to capture what's going on. Start LogSTinG, then
LogCTRL. Use the latter to configure it such that it will log all the
TCP_* and CN* and resolve calls, but nothing else (to reduce the useless
logging). Let it log parameters, pointers and even buffers, and switch
it active. Then click 'Fix Settings' to make LogSTinG accept the settings
and 'Leave' LogCTRL. Do all this *after* you got online, and after you
started CAB (again to reduce useless logging). Do the authentication,
watch it crash, and restart LogCTRL to switch logging off.

You'll have a log file now that contains all calls to STinG that are made
by CAB.OVL for doing Internet traffic, i.e. valuable information for Dan
to find and fix the problems. Be aware the logfile might contain the pass-
word you used for authentication (if you managed to enter it before the
crash).

LogSTinG and LogCTRL are in the main STinG distribution.

Cheers Peter

I guess you'll get lots of offers. I could offer one too, but I guess packing
and shipping it to UK would cost more than you'd be ready to pay ;-)

> Due to my Mum
> becoming a MUD addict, I've decided to use my old STFM and portable
> TV, for her use. This'll give me a chance to use *my* computer,
> although they'll be arguements over the phone line next! :-/

No reason to. Use STinG for the Internet connection, and employing IP
masquerading, the two of you can work with the Internet at the same time
with only a single phone connection. It even makes better use of the
available bandwidth, so compared to two phone connections, you even save
money.

That is because even though the domain has been registered, there is no DNS for this domain.

I have checked the nameserve.net nameservers, which are supposed to host this domain, and no info is available - hence the real reason why you can not access the site.

It may be that when you last looked under Netscape, the domain was being served... or netscape looked at cached data... but there is nothing there anymore.

Our systems are identical, Pat. As for corruption, no -- for each
re-install I did, the files came directly from Peter's original archives.
I even checked drive C with ICD's Cleanup to make sure things were fine in
that respect.

As mentioned before, I did have a previous non-PPP version of STinG
running great with Geneva, et al. But I deleted it -- for no good reason --
and kept using STiK. And I had it (STinG) up and running from scratch in
one hour. All the above-mentioned clients worked fine at that time.

I'm mystified...

I ran across a site earlier in which the CAB 2.0 demo drew the screen super, super, super slow. Even on a plain fill, you could literally see each line as it was being drawn. And if you brought up and removed a dialog, causing a redraw, it would redraw that portion of the screen, super slow also, taking several seconds to redraw a small box.

What's up with that?

Terry Ross heeft geschreven in bericht <65t99g$qjv@news2.tds.net>...
>Hi,
>
> Many years ago, the Amiga had a game wherein you managed a shipping
>company. It was similar in concept to "Oil Imperium" on the ST - you
>had to make business transactions, pilot your vessel, things like
>that. It might have been called "Port of Call" or something similar.
>Does anyone know if a port was ever done for the ST, and if so, where
>I might be able to buy it?
>
>Terry

Hello Terry,

AFAIK This game "Ports of Call" was done also for the PC with digitized sound and oh *wow*
EGA support *grin*.
The odd thing was, it did use GEM, or so it seemed... (yes GEM was originally developed for PC's and some developers apparently use it). At least GEM fonts and .sys files. I think....
Strange... But can't help you otherwise... Nice game btw... but it had a major fluke... with one specific shipping route you ALWAYS made the most money to become a winner.....

Regards,
Werner

Okay, so its -supposed- to do this? (just a way of letting you know?)
Hmm...so why doesn't version 1.25 show this from the same site, no
matter how many times I've been there? (or is this something that was
just added in the newer versions?) Thanks for the info, btw! ;)

>the shop closed... so people never get their money back (4500FF~900US$)
>
Hm ... I am among the people who received their money back but after a
lot of letters, phone calls and menaces ... 8 MONTHS LATER !!!!
Sometimes you can not be gentle anymore ...
These people were really disgusting with their customers ...
and everybody in France knows that they were not alone in the atari
market ...

And here I have something to complain about: I was in Neuss at the
Atari show and there I bought the PixArt update from version 3 to the
brand new 4 ... a pity the version was not yet complete at the show,
so I decided to pay the update and wait for it by snail mail ... never
received until now ... some other people were more lucky ... Martin a
friend of mine who had bought the whole program received his disk last
week ... Thought I sent faxes and e-mails to the Crazy Bits company
.. I have received nothing, no answers and no software ...

Very very nice behaviour from them !!!!!!!!!!!!!!!!!!!!!!!!!!!!!

All this to warn you about paying before receiving anything and here
on the news group AVOID to pay to somebody you have never seen before
..
WHEN IT'S QUESTION OF MONEY EVERYTHING IS POSSIBLE AND THE BADEST
THINGS ALWAYS HAPPEND TO THE MAN WHO HAS ALREADY GIVE HIS MONEY !!!

Jo

It was in the 1.26xx docs:

CAB OVL 1.26 NOTES

current release version 1.2619

.../...

Timeout's while connecting and waiting for data now printed to CAB's
INFO line. These are not errors. REPEAT THESE ARE NOT ERRORS.

You will know it's a timeout countdown if it starts around 120 or 60
and decrements it's value once a second.

.../...

(sic)

Hope this help...

The store should get a makeover in January with a Feb. 1 deadline.
Thanks for the store report which will goto my team leader in Calif.

I agree with you on the 6500/300 model. I don't know were it fits in
Apple's product mix since its a consumer model priced above $2500. If it
were below $2500 w/$400 rebate w/ monitor purchase would be a good deal.
Apple has a nice rebate promo w/ the 6500/250 w/ Apple 15' AV monitor for
$2400 minus $400 Mail in rebate = $2000! Thats a deal! However with the
G3's starting at $2000, they had to do it. I will take the $2399 G3
model, the one with 266 MHZ w/ zip over a 6500/300. The $2000 G3 blows
away a Pentium II at 300 clock speed with both hands tied behind..

From: strads@tmisnet.com
Message-ID: <34859e82.2137206@news.tmisnet.com>
Source record: 112609

Since MS-DOS/Windows can format a 720 K floppy that is
directly readable by all ST/STe/TT/Falcon computers, all
that is necessary is to format the floppy.

To keep the bandwidth low, I've replied via email with
... ugh ... *.bmp images from ... ugh ... Windows 95 showing
the user-hostile method now used by ... ugh ... Microsoft
for floppy formatting.

I'd rather use GEM.

Hold down the ALT key. Use the arrow keys to move the
mouse around.

ALT INSERT is a left-mouse click.

ALT CLR-HOME is a right-mouse click.

Double-clicking is tricky (hold down ALT
and stab INSERT INSERT), but possible.

While it's not the best solution, it will keep you going
until you can get a mouse. I haven't seen this
on any other platform -- this is just another reason why
Atari is the better computer. <plug>

>>Note: You must use MiNT on top of Geneva because you need a pre-emptive
>>Multitasking OS. Geneva on it's own is a co-operative OS.

The starting order of your autofolder prg's is important.
On my TT/Hades I must run sockets.prg just before mintnp.prg. After
mintnp.prg comes then drvin.prg, mfp.prg, mfp_tt.prg and scc.prg.
This way I can dial. I also remember it was possible to use CAB 2.5
(with the special cab.ovl as provided with the masterdisk) with
PPP-connect but today for some reason Cab doesn't seems to react.
This was exactly the same problem I had with Geneva/MiNT/Neodesk.
Unfortunately I haven't write down what I've done to make it work with
N.AES. But believe me it's possible.

s> someone makes a comment they dont like ?

I think you are being a bit unfair, Tony! I don't think they have a "We rule ATARI" attitude at all. I think what the original message meant is that the platform was unlikely to survive very long without a printed magazine, and that's why they got together and created it. And it's one thing to produce software (even very good software like yours) now and again, and having to work almost all their spare time because AC has to come out regularly. (I have no connection with the mag but do know some of the people involved. I was also once concerned with a magazine for another hobby so I know the load this imposes).

v> system, running DOSEMU (and STonX when I get sick of waiting for
v> stuff to transfer over the null modem at 9600).

You do have an early version - about the third, with an internal floppy (hence the 'F') but without a modulator (no 'M'). And its TOS 1.0 is hopelessly slow for comms and hard disk access, so I would suggest you change it to TOS 2.06 by installing the correct EPROM chips. These are available at reasonable cost, but do involve a slight wiring mod as they have 32 pins instead of the 28 of TOS 1.0. Several firms supply these, with instructions - it depends where you are, and what country TOS you are after.

Regards
/Peter/

Put a DD floppy in say, your PC. Right click on A: and select, say,
"format". Select say, 720K instead of 1.44M, and click on OK.

Drag and drop, say, your midifiles onto the floppy, and stick the floppy
into, say, the ST.

;-)

It's all in the FAQ!

There's a pretty widespread, though sluggish, PC utility that does just
that. It's called Doors95 or Ceilings95 or something like that, I can't
remember. There was also a 3.1 version that does the job just fine too.

;-)

Check out the Quick FAQ.

Getting Mice for Ataris seems to be a regular subject here.

Maplin in the UK still list a Primax Atari compatible mouse in their catalogue, and do exports. They are on the web.

I bought one and it is ok.

3411. New at Systems For Tomorrow (December 3rd)

Newsgroup: comp.sys.atari.st
Date: 1997-12-03 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <664k8k$khh@uucp.tfs.net>
Source record: 112624

New at Systems For Tomorrow December, 3rd 1997
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Operation SKUMM for Falcon030 $49.99
If you love to kill terrorists, this game is for you! Blast the bad guys as they pop onto your screen. Kinda like duck hunt, but the theme is more humane than killing those poor ducks. :) Features True Color Graphics! From Logiton.

HD Driver 7 for TOS Computers $49.99
Latest version of the best Hard Drive software you can get. Upgrades from v5 or v6 are available for $25. The return of your manual and disk are required for the upgrade, Email for details. From System Solutions.

CAB 2.5 /w PPP Connect for TOS Computers $49.99
The long awaited update to CAB is now shipping. All preorders have been processed, and we have limited stocks remaining from our first shipment. CAB 2.5 includes several new features and Plug-Ins, plus it includes PPP Connect, a TCPIP stack for MagiC, to allow easy internet WWW access. From System Solutions.

Aazohm Krypht for Falcon030 $49.99
Enter the merciless world of Aazohm Krypht and confront 5 different fighters in a True Color battle to the death. This is a beat-um-up style fighting game like Kasumi Ninja or Mortal Combat. It contains violence and some bad language, so it's not for the kids. Must be 18 to buy. From Logitron.

Zero 5 for Jaguar $59.99
Zero 5 is a futuristic space shooter set in a 3-D, 360 degree playfield. The year is 2044 and the battle for Earth has begun. Multiple weapons, driving soundtrack, non-stop combat, multiple power ups, and 15 extended missions contribute to a shooters game with real depth. From Telegames.

Radical Race for Falcon030 $49.99
Radical Race is an exciting new top view racing game (ala Power Drive Rally on the Jaguar) with an important difference: guns! Requires 4MB RAM and a Hard Drive. Jaguar PowerPads are supported. From Logitron.

Xplore CD for TOS Computers $24.99
This German disc contains mostly German PD and Shareware software (How did that happen?) Also includes a collection of fonts and graphics for Calamus. Plus a few full version programs such as
~~~~~~~~~~~~~~~~~~~~~~~~~~~

the ToXis virus killer. From Seidel Softwareservice.

Electronic Cow!
Three cool music applications! For more information check out
the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
MIDI Maze $4.99 The classic happy face shooter!
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

From: john.moffat@lion-nathan.co.nz
Message-ID: <881186988.28705@dejanews.com>
Source record: 112625

Hi Sven

I had (have) similar problems with mine. Mine is simply the din plug audio out connection. And I find wiggling it, or moving it in or out finds the correct contacts to give me L & R stereo. ((Eventually I'd prefer to replace them with stereo RCA jacks like my STe had, because it will eventually get worse if I keep the wiggling practice up))

Perhaps not as technical as other people's replies, but it's worth a crack.

Cheers,

John E. Cash

>No no, U is for Unofficial. Great difference.

A very big difference :) This seems to be heading for a very confusing
situation. Two different author's developing two different versions of the
same program :(

> >> Some people have claimed Okami to seem very "secretive" since it's been
>> hard to get hold of and the official homepage is only in German.

I was one of those people. And I stick by it! Okami just does not have the
presence that other internet software has. Everyone's heard of NOS, NEWSie,
Oasis etc.etc. and knows where to get them. Not so with Okami!

>JdB has an english page (but we are not speaking of the same version):
>
>http://www.xs4all.nl/~josdb/eng.html
>
>I use it for a few weeks now and i find it just... marvelous !

Also don't forget that JdB's version of Okami 1.29 also supports NOS format
news and email. That means that you can use Okami with NOS (if you're a
glutton for punishment), or with STiK/STinG via POPwatch 2.40 and NEWSwatch
1.30 (available from my web site). I know that's what Pascal uses :-))

>Also ,will CAB (or maybe it already does?) support SSL, RSA and Cookies?

I added SSL support to the MiNTnet overlay in July. You can get the source and binary from my web site in http://www.highlandsun.com/hyc. The compiled binary has SSL support turned off; it's illegal for me to export encryption code from the United States. But you can recompile the source yourself and plug in a freeware SSL library. I used SSLeay 0.8.0, which you can find at http://psych.psy.uq.oz.au/~ftp/Crypto/. (The current version is 0.8.1; I haven't patched up to that level yet.) If you need help compiling the library, let me know, I can pass on some notes from my own build. If you can build all of this and are willing to set up a public distribution site for the fully SSL-enabled binary outside of the USA, let me know.

The current version (1.83) supports the rest of HTTP/1.1 that 1.81 didn't. However, the cookie support is not present. That and the authorization code will be showing up in another week or two. The cookie code is done and supports both version 0 (Netscape style) and version 1 (HTTP/1.1 style) cookies.

3420. [Q] Help new TT owner

Newsgroup: comp.sys.atari.st
Date: 1997-12-03 00:00:00 UTC
From: mghembru@tyrant.uwaterloo.ca
Message-ID: <EKMo43.D6y@novice.uwaterloo.ca>
Source record: 112633
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Figuring I'd never get my hands on a TT in anycase, I didn't pay that much attention to all the TT stuff. So, today, I go to our university's surplus sale and find a TT w/ 10 megs ST ram for $CAN 27, and a PTC1426 monitor for $CAN 5.40 (some guy beat me to the 19" ECL monitor, forget the model name). Also had an SC124 or whatever, but I already have one of those. Is the PTC a VGA monitor in disguise?

Anyway, so I boot it up, and sure enough, 10 megs ST RAM test out ok. Hard drive spins up, but doesn't boot. Desktop comes up.

So, I quickly ftp'ed a disk driver (cbhd by Claus Brod) and transferred over from my PC here at work via floppy. Running cbhd.tos locates the drive: it's identified as a seagate 157N, I believe. That's about 48 megs or so? Anyway, after doing this, I can install "C", and then access the drive. There's various stuff on it. This machine used to be hooked up to a scanner (someone beat me to the scanner too), but I did get the Navarone cartridge interface - any use for that? I can install drives D, E and F (haven't tried any more) and they all have stuff on them. Except, there are disk errors accessing each of these drives. Trying to do a "show info" on drive C caused more drive errors. So, question 1) is this driver too new? I've ftp'ed the AHDI 5.04 drivers, would those be better? I assume the Atari ACSI->SCSI module will work with most smaller sized SCSI drives if this one is hosed? What is the best HD driver to use, in general, that's either cheap or free?

Also, I seem to remember TT ram as being just plain simms? Are they 1 meg or 4 meg simms (30 pins, I assume). 1 megs are dirt cheap, but 4's aren't and are hard to find..

I'm considering running Linux on this as a secondary machine to my P210MMX, but I'm wondering if 50 megs hard drive space is enough (if I reformat the drive)? Anyone else done it? Or will MiNT/MiNTnet run X11? I'm guessing there are no cheap ethernet cards for the TT? I'd love to have a localnet..

Anyway, if you have any other suggestions such as "you absolutely must get program XXX for the TT", I'd love to hear them. I'd like to get the hard drive working reliably (and booting off the hd versus the floppy) first, and then move on to bigger and better things.

Thanks in advance,
Mattias

>code in CAB.

I started playing with GNU Kaffe over the summer. It's huge. I never got it
running properly on my TT, even with a gig of disk and 20 MB of RAM to run in.
I wouldn't even try to run it on a 68000 w/4MB of memory.

Of course, it may be that porting someone else's implementation just isn't
going to work, and someone will have to write a native 68000 version from
scratch, to get it to perform efficiently. Quite a task. Even on my 166 MHz
pentium at the office starting Java brings the machine to a crawl. Dunno...
It's rather annoying... I'm sure someone else more dedicated than myself
could get it done, though.

I think everyone got stiffed once or twice dealing with companies or just people selling on the NET. One of the best solutions for this that I found was to do a search on the seller for past articles where he would be selling stuff and see if there was any feedback from the buyers. Another trick is to ask them who they have sold to in the past and then E-Mail them to see how it went with the sell and the product itself.

Ok, update. I got AHDI 5.0, formatted the drive, repartitioned into one 48
meg partition (I assume the 16/32 meg partition limit was fixed in TOS
2.05/6? What is the new limit, if any?). Installed the cpx files that came
with AHDI. Nice to get that clicking off (system didn't come with mouse, so
I've been using keyboard navigation -> wish Win95 worked as well without a
mouse!!). I have a spare mouse at home though, so that's no problem.

Anyway, here are the questions I'm left with: what are my options for
networking to my PC via Linux? Obviously I _CAN_ install Linux in 50 megs,
but the question is, how useful is it? Or am I just being wishful and Linux
for the TT has never been around? Can a "dual-boot" be set up so I can boot
Linux off one partition, and still keep a small Atari partition?

Right now I'm running the PCI1426 in TT medium resolution (640x480x16). Is
this within spec? Seems to run just fine, and looks very nice.

Memory expansion: I'm already at 10 megs ST RAM, so I'm interested in
TT-RAM. How can I increase TT-RAM? Which one does Linux use? I know some

programs need ST RAM, and some will run in either. Is there a rule of thumb
I can use?

Thanks,
Mattias

Source record: 112637

I tested the scrolling and linking while still downloading a page
and it works! Never worked before so it's strange. Maybe my
Nemesis/Afterburner combo ois giving me more horsepower.

One other question I forgot to ask:
If I get to pages that are larger than 640x480 CAB cuts them off rather
than letting me scroll horizontally. Is that still true or am I
missing a setup option?

Greg

3425. Magic Question

Hi,

I'm using Magic 5.03 And I've got a small problem:

I can't use the Magic Shell After a Rez Change, It acts like the
return key was stuck or something, all other applications don't
complain but this one goes crazy. Any Suggestions? Any other shells
I could use that are compatible with Magic?

Thanx
Gilles Charron

Well I've very succesfull changing rez exept for that problem, I must
say I don't use any ACCS...

BTW, I'm using a Nemesised Falcon030 with 14MB ram.

Thanx, Gilles

Is anyone selling a 2nd hand modem, atleast 14,400 baud? Due to my Mum
becoming a MUD addict, I've decided to use my old STFM and portable
TV, for her use. This'll give me a chance to use *my* computer,
although they'll be arguements over the phone line next! :-/

Thanks,

James

I've done that. My (external) modem is dial out only on com2 using
TCP/IP. Com1 is connected to the ST via a null modem cable. Ras can't
see com1 atm but when it can the only two things I can do is "install
modem" or install an "x25 pad" (whatever the heck that is).

>You can change the properties of certain
>ports (RAS port) to accept incoming calls.

How do I do it for a null modem though? ;-)

>You will need administration

You do not need version 2.5 for at least the latter two items on your wish, just make sure you have one of the more recent versions of the CAB.OVL. The OVL that was in release when v2.0 first came out did not allow these things, but that was an OVL limitation, not a CAB limitation. With the more current OVL's, v2.0 of CAB can link and scroll before the page has completely downloaded.

I do not yet have my copy of v2.5, so I can not tell you what features it has that v2.0 does not have.

Latest is version 4.2 - IMA stereo support added.

Thanks for the suggestions.
I have been expermentaling with better icons but the code to do that alone was
well over 20K which will double PhPlayer size, just to look nice. This is not
very good.
The save function would be nice, may be into AVR or a more 'Atari format'.
Well... what can I say about MagiC. Any donations for it will be great.

As I was glancing through the Atari Compendium recently I observed a reference to the TT video shifter smear mode. It says that this mode causes a pixel with a value of 0x0000 to be coloured with the same colour as the previous pixel.

How is this feature useful?

3433. Re: Zip connection?

Newsgroup: comp.sys.atari.st
Date: 1997-12-03 00:00:00 UTC
From: shammond@loop.com
Message-ID: <662r9tbiq1@usenet87.supernews.com>
Source record: 112734

This is a bit like the chicken and the egg. I bought a ZIP and also cartridges, but these are formated for IBM. I do not succeed in making the ZIP seen by my TT. I use ICD-pro 6.5.5. I could upgrade to HDDriver (and I did understand that it is worth the money), but before I do this, I would like to backup my harddisk to ZIP. Any suggestions?

Cecil.

Cecil,

If I remember correctly, ICD Pro will not see a Zip without a software patch - there was one available on Genie sometime ago. Get HDDriver. I use it on my TT/Nova combo and have no problem with either a SyQuest EZ135 or SCSI Zip. The Zip only supports SCSI positions 5 or 6. Iomega tried to save production costs by not fully implememting the SCSI protocols, thus the limited positions and lack of term. power.

The other problem, PC/Atari compatable partitions, is an old story. According to a post by Uwe, the latest version of HD (7) will allow you to make partitions larger than 32 megs that are readable by both the Atari and PC. Lacking that you will need to use BiGDos ver 8 with TOS/Geneva or MagiC 5 with HD 6 (maybe 5) to be able read/write to PC formatted Zip disks. If compatablity is not an issue - all you will need to do is partition a Zip disk with HD. This will not work with the Zip "Tools" disk. Given the right combination of software, ie the ability to read PC formatted disks, you can use the Tools disk, but you cannot re-format it. Iomega mentions this in the Zip instructions, adding that if you are using the Zip drive in a Unix environment, you will have to do a low level format of the "Tools" disk to be able to use it.

BTW - so long as ICD Pro is being used in the "Atari compatable" mode (check the configuration settings) you can replace it with HD with no problems. ICD used a different method of exceeding the 32 meg partition limit than the one Atari finally adopted - thus the problem of compatiblity.

X25 is a packet swtching protocol. You will not need it.

You need to install a null modem in the "install modem" menu. I think it is called "Dial-up networking serial cable" or something like that. You need to disable the modem detecting when installing so you can choose the serial cable connection option. This is separate from RAS, RAS uses a modem driver (unimodem.drv or similar) so installing a "serail cable driver" is required.

BTW, you still need to be authenticated when you do the connection. The lowest security which NT uses is PAP, make sure you tick allow clear text password (or something like that) otherwise it will use CHAP.

You can do all of that with the 2.0 demo, except resizing frames
(though you can resize the whole window). Regarding scrolling pages
or selecting links while a page is downloading, you just have to keep
the mouse held down until it 'sees' it.

I am posting for a friend with an ICD Host Adapter on his ST and STe systems.

We have a new 525 meg SCSI tape backup unit and would like to make it work with the Atari. Cabling issues are not a problem and the drive is recognized by the host adapter, but we need software to support the mechanism.

I have been out of touch with the Atari world for some time and would appreciate referrals to pass along to him for this concern.

If we are successful, I also have a second 525 meg drive and two tapes to offer to anyone who wishes to purchase them for a PC or Atari.

I have a Cyrel Sunrise and the latest software which would be willing
to donate. I've read enough, here, to appreciate your efforts.

The caviat: The reason I don't use the card any longer is because
it's lack of compatibility with the latest apps was beginning to
become a problem. I moved to a Super Nova and am much happier but it
wasn't a cheap solution to the problem.

The card is a real nice package from a hardware point of view. The
problem is obviously the software drivers. Cyrel was so close when
they left the market.

I'm in Southern California, too. Send Email if you want to talk about
it.

Take care,

Pat

It's been a while so I hope I'm not missing anything:

1) Place the STFAX.MOD into the modules folder.
2) Select menu Options/Printer...
3) In the Printer Setup Dialog, select Printer: QFax-Driver
4) In the Output Port: -- External Driver -> STFAX.MOD

That's it for the setup.

To use the STFax driver, select the QFax driver in the File/Print
menu.

Good luck,

Pat

Working Hardware:

*SM124 monochrome monitor
*SC1224 color monitor
*520STFM with I think 1 meg of RAM
*Mega STe motherboard with 4 megs of RAM & TOS 2.05
(sorry, I'm keeping the case to put a Pentium motherboard in :)
*Mega STe keyboard
*A couple lame Atari mice
*Nifty suction-cup QuickShot joystick
*Seagate ST157N 48MB SCSI HD

Non-working Atari hardware:
*520STFM with 2.5 meg Z-ram upgrade

Software:
*MultiTOS
*Geneva
*First Graph
*a few other non-pirated things...

It's been a while since I've kept on top of the going prices for these things, but I don't expect it's worth much now-a-days. I'd like to get rid of it all at once, so I'll just take the first decent offer for everything.

(BTW, I think it would be pretty easy to put the MegaSTe motherboard into one of the 520 cases, giving you 4megabytes and 16megahertz of RAW POWER! It's got the SCSI host adapter on it too.)

Atari IS NOT a capable internet computer.
I cannot do anything with a Falcon. It is too slow, to klunky...Cab amd stik and sting all are trash that do not work. Web browsing in 256 colors 640 x 480 is horrible in a Falcon..The images are grainy and conver terribly the software all hangs and locks and NEVER HAS worked predictably...NO PPP (Don't even start with MintNET, It's not compatible enough with TOS to even be an atari os) I would NOT pay money for a web browser on a falcon when it has never proved to work. I want to see this first. Even when the crappy Cab does work, it sucks, Atari's hokey planar graphics make it useless...why should the screen jitter like monet everytime you scroll?! Win95 is a horrible OS but it works for the Web in ways Atari NEVER can...Want to Web browse? by a dumb old MAC 040 for $500.00 and run Communicator in OS/8..now that's a computer for the WEB. The Falcon may be ok for Audio Recording in Black and white, but for god's sake quit touting this PILE of retro crap Falcon as an internet computer...I don't even want to hear about half ass compatible Atari's...why spend $1000's to get a "FAST" TOS machine then run CAB on it what a waste.
PROVE ME WRONG, please Email me a web browsing system that would actually work on a stock Falcon, my falcon is even 14Meg, and You can't be serious about me using this hunk-o-computer history to web browse...when a cheap Mac or PC is far more productive for this use.
Falcon is even a high end Atari and it can't do 16 bit color in 800 x 600 which is minimal for a PC and atleast possible on a 1993 Mac. Now how about IRC, forget it! there is no serious chat client for the falcon that is an improvement on Unix Shell chat.

Paul

Hi Danny

In article <34873498.6829764@news.demon.co.uk>
denesh@cyberstrider.org (Denesh Bhabuta) wrote:-

>Am I right in thinking that there is no way to use any of the current
>STiK/STiNG email programs with the commercial CAB/PPP-Connect package?

That's right, there is no way to use STiK/STiNG clients with PPP-Connect.
ASH are supposedly releasing an email package to use with it. But when it'll
be available in the UK, who knows? And of course it won't be free.

>What do folks around here do for their email needs when using the ASH
>connection/web browser package?

Don't use PPP-Connect, is the simple answer! STinG gives a more flexible PPP
solution (for networking atari's as well as internet).
Ok, I'm an avid STiK/STinG fan, but I see *absolutely no* advantage to using
PPP-Connect as opposed to STinG. Oh dear, it's gonna be one of those threads
:)

Seriously, I bought CAB2.5 at the last show, and apart from an initial
curiosity, have never used PPP-Connect. What's the point?

Hi there,
I replied to the e-mail you sent too, since I read my mail before I read the news, so here we go again since there may be some public interest as well:

>I had (have) similar problems with mine. Mine is simply the din plug
>audio out connection. And I find wiggling it, or moving it in or out
>finds the correct contacts to give me L & R stereo. ((Eventually I'd
>prefer to replace them with stereo RCA jacks like my STe had, because it
>will eventually get worse if I keep the wiggling practice up))

Of course, you can do just that!
The mini-tele jacks are a pain - even if you exchange them, they will break again because they're a bad compromise of functionality and space-saving, where the latter sadly played the greater part.
Just inside the in/out mini-tele jacks, you have a couple of zero ohm "resistors", there are six black resistor-like things. Three of them are for input and three for output (middle is ground on both sides), and you can simply solder some leads to these spots and connect RCA-jacks instead. This is an operation I've made on many Falcons and there's no problem finding space for the RCA connectors directly above the mini-tele jacks.
Ask me more if you need to...

Best regards,
Claes

Out of the ether, the following was mentioned by macdonal@cfcsc.dnd.ca...:

m> When I attempt to do this I get a series of solid and dotted lines,
m> not text!
m> Has anyone experienced this problem, and/or knows of a solution??
m> thanks for any help
I haven't experienced this problem but it sounds like the scanner part of
Migraph OCR is hardwired to the system clock speed and trying to sample the
cartridge port expecting it to be running at 8Mhz.

There was an ST compatibility package (I think it was called something like
Backward) for the Falcon. Try running this and seeing if the various options
improve things any? (especially running the system at 8Mhz).

Well if you want a sample player/converter and editor then check out Sam-Edit 2,

http://www.ritter.demon.co.uk/software/samedit2.html

Its only beta at the moment and has a few bugs that need sorting out.
Replay requires DMA sound capabilities.
Any comments are welcome.

There is a version of Star Raiders for the ST. You can buy it -cheap- from
any good Atari dealer. Try CeeJays software for one. They are having a 30%
off sale right now... I just ordered $100 of used software (and thats a lot
of software in the Atari market!) and they immediately knocked it down to
$70! Their number is: 1-618-242-0405 from 6pm-10pm CST. They carry items
for Atari computers, the Lynx, Jag, and Portfolio... :)

Great idea to include the URL!

Let me guess: the page used a 1280x1 pixel GIF to create a background with a stripe down the left side? That might create such an effect.

(MCIBTYC drivel removed)

hey, TIFKAS (The Idiot Forever Known As Sinclap), have you
forgotten that it was this type of drivel that got Cedarnet to
reprimand you for violating your user agreement with them? As you well
know, comp.sys.atari.st has a charter that makes MCIBTYC flames like
yours verbotten. You're more than welcome to post in
comp.sys.atari.advocacy, or in the new newsgroup alt.nerd.obsessive :)

And please, none of your "I'm covered under the First Amendment"
drivel - the 1974 Supreme Court decision FCC vs. Pacifica determined
that known public nuisances like you are not protected under the free
speech provisios, and that your ISP (which, I suspect, is your business
account) is responsible for what you post here.

BTW, I notice that you're STILL dodging my questions to you. What's
wrong, Sinclap - afraid to be shown up for the obvious fool you are
AGAIN?

If you missed my last post, here it is reposted for you eludication:

Well, it looks like the sewers are backing up again - TIFKAS, The
Idiot Forever Known As Sinclap (now that he has been booted off another
ISP) has decided to reward us with his presence again on
comp.sys.atari.st. Except this time, TIFKAS, the advantage is ours!
Muahahahaha!

Remember, folks, one thing TIFKAS hates more than anything is for
everyone to ask him logical questions that he can't answer without
showing his extreme ignorance. So ask away!

And speaking of drivel, let's go on with these questions that
Petey-boy still dodges in comp.sys.atari.advocacy:

1) you claim that Apple is actually turning a profit. How can that be
when the fiscal year report shows that Apple LOST ONE BILLION DOLLARS,
with $160 MILLION LOST IN THE LAST QUARTER ALONE?

2) you claim that Apple is stable. Why, then, did a well-respected
company accessor recently give Apple a failing grade, and said that they cannot
sustain any further losses?

3) you claim that Apple is still licensing the manufacture of
clones. Other than UMAX's contract which allows them to manufacture Mac
clones for the Far East, what are the other companies making clones
after December 31st and how did they get past Steve "Arrogant Bonehead

(TIFKAS' own words)" Jobs decree of "no more clones". Please provide any documented evidence ("because I told you so" is NOT considered good enough - we want magazines, page numbers, web pages, anything).

4) why is Petey-boy so afraid to post any of his Mac "good news" info to comp.sys.mac or comp.sys.mac.advocacy, which have shown nothing of any of TIFKAS' drivel, but the exact opposite? Is it the fact that if he did, he would be reduced to an onion ring within a matter of seconds? :)

5) you claimed that in one Apple dealership that you could take all the software available there for the Mac and pile them in "12 30-foot piles" (cross-platform titles included). Were they individual titles, or several of the same titles? Were any of the titles in the delete bin? Why, when I went to a couple of well-known computer dealers in Toronto that cater to Mac users could I not visualize "12 30-foot piles" of the software available there? Are you sure that the "12 30-foot piles" are not the copies of MacUser you have in your basement apartment that you frolic through naked every night? :)

Just remember these things and keep asking them. Be sure to ask him other embarassing questions as well should they crop up. :)

And TIFKAS, I want answers to ALL my questions. Not which ones you feel like answering, ALL of them. Failing to answer even one shows that you are not qualified to speak as an expert either on Apple or on Atari, and should thereby keep your lip zipped - and proves again that you are a coward.

SAY YES TO APPLE. SAY YES TO ATARI. JUST SAY NO TO DISINFORMATION FROM CLUELESS GEEKS WITH NO LIFE WHO ARE TRYING TO SAVE THEIR JOB.

> I can use?
>
> Thanks,
> Mattias

I used to own a TT. 2 meg ST-Ram
8 meg TT-Ram
48mHz CaTTamaran accellerator
Quantum 425meg HD (internal)
Seagate 80meg HD (external)
CD-Rom
28.8 Hayes modem
SVGA monitor

OS: TOS 3.06
TOS 4.??
Mint 1.12
Linux 0.9? / X

With only 52 meg you will not have much room on your drive for anything
other than Linux and swap space. TT-Ram can really speed things up,
Linux is one thing it can really speed up.

Running under TOS (3 or 4) I never used more than 3 meg of memory, but
Linux/X would chew up almost all the TT-Ram. Get the GNU tools to let
you easily monitor your system resources.

To connect the TT to the outside world you add an ethernet card in the
VME
slot, or use slip/ppp over a serial port. I used Linux/ppp into work.

I currently own a 233mHz AMD-k6/W95, and do not see any real difference in perfomance over the TT, but the connection into work is easier since I can run X without invoking Linux.

If the person that bought my TT from me ever wants to sell it, I am interested in getting it back.

Brian

Sorry, I didn't save the URL. I ran across it accidently, as a link
from a link from a link. If I run across it again, I'll be sure to
write down the URL.

>Let me guess: the page used a 1280x1 pixel GIF to create a background
>with a stripe down the left side? That might create such an effect.

Actually, the backround was plain gray. And it took FOREVER for the
background to draw. It was a really simple (though somewhat large)
page. Just a plain gray background with the usual ads, pictures and
a few buttons.

Even if they did use a large GIF to create the background, I would
think it would be slow to load, but then it would be drawn to the
screen very quickly once it was loaded and converted.

It depends on the page. Most of the time CAB will let you scroll horizontally, but there are times it won't. I would guess that the times it won't it is fooled somehow. IOW, a bug in the program or the page, rather than a feature.

On a similar note, CAB sometimes screws up text and picture alignment, sometimes putting the picture over the text or the text way off the screen (with no horizontal scroll bar). A very good example is ESPN SportsZone (espnet.sportszone.com/). Anyone know if CAB 2.5 fixes this? (I guess I should know firsthand today or tomorrow. :)

Date: 1997-12-04 00:00:00 UTC
From: Daniel Ghersinich <dghersin@alf.tel.hr>
Message-ID: <666m2r$av5@argos.tel.hr>
Source record: 112560

What can I do for connect IDE HD to my ATARI 1040 STf, and if there is a way
how to build it by myself.
If not, a home made SCSI <-> DMA conection will be OK..

THX DANI

** Offers from within Canada only **
Wanted (Montreal, QC):
----------------------

* SCSI CD-ROM drive and external SCSI case/psu,
preferably brand new and under warranty.
Panasonic or similar. 8x or faster.

* External SCSI Case.
Enough space for 2 devices (side-by-side preferred).
Maximum 4 devices high.

* ET-4000 graphics card.
Optional: ET-4000 adapter card for Atari TT030
Optional: NVDI 4.11 with ET-4000 drivers (Atari)

* Crazydots-2 graphics card.
Including drivers for a TT030.

* Cmanship Complete, by Clayton Walnum.
Book about progamming on Atari using C (with source floppies).

Browse my Homepage for some Atari hard/software I'll no longer need,
if you're interrested in trading instead of buying/selling.

Please reply through e-mail. Thanks.

>are paying the price for that mistake.

I recently learned that early on, when Steve Adams started on STiK,
he could not locate any C lib for proper BSD sockets so he decided
to make his own stack based on his understanding of the RFCs.

Much later, soemone found him proper BSD libs, but several clients
had already been written. It was too late to alter the API and the
client authors didn't exactly feel like rewriting their thing from
scratch.

So indeed, we are now paying a hefty price of incompatibility with
BSD standards. It's a major setback for Atari.

Then again, MiNT running on a 68000 doesn't exactly meet requirements
for appropriate Unix hardware either. And MiNT's memory protection is
buggy as hell compared to Linux 68k.

Still, as Magnus noticed, we can use parts of PINE and other clients
made for BSD to design beautiful GEM clients. This is what I'm doing
for my ongoing FunkPost project (fully GEM Mail/News MiNTnet client).

Someone should also rewrite PPPD/CHAT to become a fully GEM dialer
with a GEM configuring/installer tool for the whole MiNT+net kit.

Sounds logical, but I'm sure that it's not the problem. You can access
that page at any time by using Netscape. There's another page that you
might want to check at http://www.boulevard.or.id
This page is supposed to show an Indonesian student magazine at the
University of Bandung. It's still heavily under construction, but at
least you can access that site. However, if you try to access via CAB/
CAB.OVL yoo'll find a page called 'apache' - whatever that is supposed
to be.

Cheers,

Alex

Source record: 112565

Sting works great (very fast). But I have just a few questions regarding the PPP.

I am able to get a slip connection with compression. However, I am unable to connect using PPP. Everything seems to be fine until the dialer attempts to initialize the link. For some reason it is unable to do so. I called the university's computer using the stalker terminal program just to see what was happening. After entering PPP mode, the server says something to the effect of "header compression will match your system". Could this have anything to do with it?

Also, at what point will I be prompted for PAP ID and PAP password. When I called with stalker, I was not prompted for this information. Does this mean that my account does not use it?

There have been a few in the TOS market that, on their last gasping breath, seemed to have taken advantage of the users. There are however many upstanding dealers, past and present, that provide excellent service at a reasonable price. Reasonable meaning that they won't sell one thousand of an item, but maybe only fifty, thus the higher than normal market price for a specific piece of software or hardware. I don't think I would go as far as price gouging though. Generally the U.S. dealers sell for the same retail as the country or origin. I kind of like the service I get from the dealers in the States. I always get the owner (or his mother:) on the phone, and know exactaly what I am getting. No bait and switch. Admitidly, it is hard to justify purchasing a SCSI CD ROM writer for $450.00 and software for $250.00 when an IDE recorder can be had for $250.00, software and all for a PC, or a Video card for $500.00 when a decent PC card goes for $100.00 (remember when a VLB card cost $500.00?). There are exceptions. The Afterburner, while costing more than most TOS machines, is not that over priced compaired to Sonnett's accelerator cards for the Macs.
I would hate to add up ($) what I have in my Falcons. But having experienced on daily basis PCees and Macs, it's not such a high price to pay for a superior machine:).

I agree with Howard that current implementations of Java stretch the capabilities of the current standard (if there is such a thing) PC used by most people.

I was also under the impression that as the Java language rigidly defines integers as being 32bit it can only be ported to a 32bit machine. This would preclude any 68000 version, but would allow for a Falcon/TT/Hades... version.

I know that non-PC manufacturers have written Java implementations that fit into half a meg of RAM so perhaps in theory it is possible to write a Java implementation for 32bit Atari computers that will run at a reasonalbe speed. But as Howard says it will have to be written from the ground up.

Check out the Quick FAQ.

There are no DIY plans that I know of, except an internal IDE adapter
that was published in a german magazine a few years ago. It required
getting a PAL from them.

No, my copy of CAB 2.5 was shipped from SFT on Monday. They told me
unless there's a patch made available, they wouldn't expect 2.6 for a
couple months. I was just on ASH's page. They said it's available
in German and to check at System Solutions for English distribution,
but they have nothing about it on their Web site. I think SFT is
probably right with their two month estimate.

>> suggestions?

ICD should still work. If you are worried about corruption on your HD
from installing HDdriver, you needn't be, you can just run the driver
from the floppy disk. You can then backup your HD to the Zip and then
install it onto your HD. If the ICD driver is in memory then you should
be able to run the main program (HDUTIL?) and it will scan the SCSI bus,
if the drive is connected properly then the ZIP should show up as being
one of the devices on the chain as it should when you try the IDCHECK
program which is more approriate for this purpouse. What happens when
you run IDCHECK?

> Cecil,
>
> If I remember correctly, ICD Pro will not see a Zip without a software patch -

Mine worked fine for some time on my ST, maybe the TT does however need
a patch.

> Get HDDriver.

It is better but may not be necessary.

>So, I quickly ftp'ed a disk driver (cbhd by Claus Brod)

Nice driver, I use it all the time.

>identified as a seagate 157N, I believe. That's about 48 megs or so?

Yes, very small by today's standards and, as it is an old model, it
could well be on its last legs.

>drive errors. So, question 1) is this driver too new? I've ftp'ed the AHDI
>5.04 drivers, would those be better?

Could be. Some early partitioners/drivers were not very standard.

I would guess that, quite soon, you will want to replace the 157N with
something a bit bigger (you can get 500Mb second-hand drives very
cheaply nowadays). It may also turn out that the 157N is failing badly
which will speed up your decision.

In the meantime you may want to retrieve s/w from the drive. Best bet
is, first of all, to get an HD editor (such as SED568 which is on
Umich, I believe). This will check out the state of the drive for you.
You can also use it to read the bootsector of the partitions. Close to
the front of the sector you should find the "signature" of the s/w
used to partition the drive 1.e."ICDINC" etc. Then get hold of a
driver from the same stable as the partitioner - this will give you
the best chance of recovering anything.

>I assume the Atari ACSI->SCSI module
>will work with most smaller sized SCSI drives if this one is hosed?

Just a minute!! The TT has a REAL SCSI2 bus connecting to the internal
drive and to the port at the back. You don't need any adapter as this
i/f will work with ANY SCSI device. This is one of the big advantages
of the TT (and Falc). There is a ACSI port but this is just for
compatibility with earlier models - ignore it.

You could, of course, just connect a new drive to the SCSI port. This
would mean you could easily copy from the 157N to it but it would mean
that you would have to find a source of 5v and 12v power to drive the
device. A neater solution is to ditch the 157 and get a drive of the

right profile to fit the internal slot. (Undo recessed screw at base
of TT under drive housing then lift the plastic housing+drive from the
top). You just substitute for the 157 using the existing cabling.

>What is
>the best HD driver to use, in general, that's either cheap or free?

You've got it! CBHD 5.01 or 5.02 is the best FREE driver. HDDriver if
you want to pay for it.

>I'm considering running Linux on this as a secondary machine to my P210MMX,
>but I'm wondering if 50 megs hard drive space is enough (if I reformat the
>drive)? Anyone else done it? Or will MiNT/MiNTnet run X11?

You will find 50Mb very restricting - get rid of it! It's probably
knackered anyway :-) Yes, MiNT/MiNTnet has X11.

>Anyway, if you have any other suggestions such as "you absolutely must get
>program XXX for the TT", I'd love to hear them. I'd like to get the hard
>drive working reliably (and booting off the hd versus the floppy) first, and
>then move on to bigger and better things.

Yes. That's the way to go. How exciting. If you were not so keen on
Linux I would encourage you to get the Magic alternative operating
system - it allows you to make good use of the TT. Also NVDI which
does wonders for the display speed. There's not a lot which is special
to the TT - most Atari s/w will run on it. The biggest drawback, I
find, is the native graphics capability. You have to spend quite a lot
of $s on an add-on graphics card to get over that.

Gulp! Why didn't you use the partitioner in CBHDCONF? It would give
you better confidence of compatibility if you are going to continue
using the driver.

>Can a "dual-boot" be set up so I can boot
>Linux off one partition, and still keep a small Atari partition?

Yes. CBHD will allow you to select the boot partition while the driver
is initialising.

>Right now I'm running the PCI1426 in TT medium resolution (640x480x16). Is
>this within spec? Seems to run just fine, and looks very nice.

Yes, that's what I use. It's also really impressive with a good
mono-monitor. The 16 colours is not very nice with real graphics
application or www, however.

C't published an article about a DIY IDE/TOS 2.06 interface four years ago,
and the PCB and GAL is still available from eMedia. Their e-mail address
is 'emedia@emedia.de'.

The PCB costs DM26, the GAL DM19.

: Isn't there also Logic Audio for Falcon and Cubase Audio Falcon?

Yes, there are a multitude of digital audio programs for the Falcon,
including these two MIDI sequencers that also allow digital audio
manipulation.

The audio capabilities of the Falcon are superior to those in the TT, but
my primary need right now is MIDI sequencing; hence, the TT.

The Aixit Magnum boards look like a suitable choice to upgrade the memory
of an STE beyond 4MB, but unfortuantely they don't support the STE
(although they do support the Mega STE).

Is there any other way of upgrading the memory beyond 4MB?

I have some Atari ST stuff for sale for anyone interested.

1 - Atari 520STe with 16mhz ICD adspeed, turbo rs-232, tos 2.06, 4 megs
memory.
$100
1 - Atari 520 ST tos 1.04 and 1 meg memory
$50
1- Magnavox Color Montior 14 inch works great with an ST or an old 8-bit
system
$40
1 - ST external ds/dd disc drive.
$20
1 - Star Nx-2400 printer (24-pin)
$40
1 - TEC Board for Mega ST and tos 2.06
$15

And more stuff that I can't remember so send mail if your looking for
something be it hardware or software.

There was one available from Marpet, you just plugged it on top of
the CPU and that's it. It looked beatiful, but I don't know if they're
still available. I heard something about somebody taking over all the
Marpet-products, but I can't remember who. TUS perhaps.

Hi

Am I right in thinking that there is no way to use any of the current STiK/STiNG email programs with the commercial CAB/PPP-Connect package?

What do folks around here do for their email needs when using the ASH connection/web browser package?

Regards
Danny

Source record: 112438

Hi!

Not to be mean or anything, but this posting is completely wrong.
It sounds like a very bitter person to me. It is kind of thick, so let me
break it down a bit for you...

> Atari IS NOT a capable internet computer.

Oh really? Why have so many had such success? Sure some have had problems,
myself included, but from what I hear, the newest setup works wonderfully!

> I cannot do anything with a Falcon. It is too slow, to klunky...Cab amd
> stik and sting all are trash that do not work.

I can do plenty with my Falcon. I love it! What versions of the software
are you using? If you use the newest version of STiNG, there are a lot of
bug fixes and it's very easy to set up. And CAB works just fine.

> Web browsing in 256 colors 640 x 480 is horrible in a Falcon..The images
> are grainy and conver terribly the software all hangs and locks and
> NEVER HAS worked predictably...

Using 256 colors is somewhat grainy on ANY machine. If it's the way CAB
dithers it's images you're upset with, that's not the Falcon's fault. I've
used 256 colors and it's not much worse than I've seen a Mac running
Netscape do. I've also never had much problem with lock-ups, hangs, or
whatever, at least with an appropriately set up system. I have however
experienced more than my share of crashes and lock-ups on a Mac running
Netscape.

> NO PPP (Don't even start with MintNET, It's not compatible
> enough with TOS to even be an atari os)

I won't even suggest MintNet. I've never even got Mint to work right. But
I will suggest STiNG or PPP-Connect. Both are now running smoothly and
quickly and are easy to set up, and both use PPP. STiNG has more software
for it, though, and is free, so that would be my choice.

> I would NOT pay money for a web browser on a falcon when it has never
> proved to work. I want to see this first.

This is a good idea. I wouldn't, either. Get the latest version of STiNG,
CAB 1.5 030 version, CAB 2.0 demo, and the latest 2 or 3 CAB.OVL's and try
it all out for free first, testing different combinations to see what
works best for you.

> Even when the crappy Cab does work, it sucks, Atari's hokey planar
> graphics make it useless...why should the screen jitter like monet

> everytime you scroll?!

This is one thing I would *somewhat* agree with. It is annoying to see the strange flashing colors when you scroll, but still, is that any reason to say the Falcon is useless for Web browsing? I personally don't browse the web just to see pages scroll nicely. And I don't personally judge a web browser on its scrolling capabilities, either. But that's just me.

> Win95 is a horrible OS but it works for the Web in ways Atari NEVER
> can...

What ways are those? I wouldn't spend a load of money on a PC, running an annoying OS, which I personally hate using, just to see a web browser that can scroll nicely and dither 256 color images a *little* better.

> Want to Web browse? by a dumb old MAC 040 for $500.00 and run
> Communicator in OS/8..now that's a computer for the WEB.

Ditto my last comment. I like Mac better than PC, but not enough to give up my Falcon.

> The Falcon may be ok for Audio Recording in Black and white, but for god's
> sake quit touting this PILE of retro crap Falcon as an internet
> computer...

I think the point isn't whether or not the Falcon is the "ideal" computer for the internet, but that there is internet software available for the machine, and it works, and pretty darn well, IMHO.

> I don't even want to hear about half ass compatible
> Atari's...why spend $1000's to get a "FAST" TOS machine then run CAB on it
> what a waste.

If I truely enjoy using TOS, I don't want a PC or Mac, and I'm willing to spend the money, is it really a waste? CAB does work, believe it or not. And it's really not as horrible as you're making it out to be. In fact, most of the problems you're complaining about (slow, jittery scrolling, dithering 256 colors poorly, etc.) would be solved with a 68060 machine (as fast a 200MHz Pentium I've heard, BTW) with a 64-bit graphics card.

> PROVE ME WRONG, please Email me a web browsing system that would actually
> work on a stock Falcon, my falcon is even 14Meg, and You can't be serious
> about me using this hunk-o-computer history to web browse...when a cheap
> Mac or PC is far more productive for this use.

If you're convinced that the cheap PC or Mac is better, then there's no reason for me to convince you otherwise. If you really want to use your Falcon for Internet, then get the latest versions and try them. If you're still not convinced, then go back to your other machines. Problem solved, huh? Why come to people who are content with what we use, and tell us that what we use is crap? It's a waste of your time, and ours. I won't rush out and buy some machine that I can't stand using, just because you like the way it runs internet apps.

> Falcon is even a high end Atari and it can't do 16 bit color in
> 800 x 600 which is minimal for a PC and atleast possible on a 1993 Mac.

With an inexpensive (less than $100 US) upgrade you can. I run 880x640 in 16 or 256 colors as a rule on mine, with a simple, free piece of software called Videl Inside. It's a little flickery, but not unbearably so. Taking it down to 800x600 makes it more stable.

> Now how about IRC, forget it! there is no serious chat client for
> the falcon that is an improvement on Unix Shell chat.

I don't personally do IRC, so I can't speak to this, but with at least I know that they are available, and they work.

To sum this up, if you are happy with the way a computer does something, use it. If you're not, upgrade it or replace it. Don't complain to the world that a computer you don't normally use for something doesn't work like you want it to for that something. Don't tell us that our machines are crap. They do exactly what we want them to and that's all that matters. If you have some "higher" standard, then be glad you do, and move on. Why complain when you have your solution already? It's not going to change our perspectives. If you don't like your Falcon, then don't use your Falcon. Sell it to someone who will enjoy it and use it.

My computer philosophy of the year: The best computer you can buy is the one that works best for you.

Mike Freeman

Paul Luscher <pl4266@u.cc.utah.edu> wrote:
> Atari IS NOT a capable internet computer.

Hmm... So why am I sitting here with a rock solid OS (MiNT+N.AES) with a
equally solid PPP-connection (MiNTnet), doing all the stuff I did with
my Wintel-box (which I sold several months ago)?

> stik and sting all are trash that do not work. Web browsing in 256 colors
> 640 x 480 is horrible in a Falcon..The images are grainy and conver

In fact CAB dithers images better than both Netscape or MSIE. It's just that
you're used to see Netscape on PC's with truecolour-cards and hence no dithering.
Come see CAB running in 16bit on my graphics-card :-)

> predictably...NO PPP (Don't even start with MintNET, It's not compatible
> enough with TOS to even be an atari os) I would NOT pay money for a web

PPP-Connect, STinG and MiNTnet all support PPP. And for MiNT not being compatible
to TOS: You obviously haven't got a clue about what you're saying. It's at least
as compatible as MagiC or Geneva. Perhaps you're talking about Atari's horrible
MultiTOS, which (thanks to the extremely poor AES) is completely unusable.

> ways Atari NEVER can...Want to Web browse? by a dumb old MAC 040 for
> $500.00 and run Communicator in OS/8..now that's a computer for the WEB.

Ha! Don't make me laugh! I'm using Netscape on PowerMacs on a daily basis and
it's totally, utterly crap. It hangs all the time, kills MacOS, is incredible
slow and complains about low memory on a 64Mb machine! It's a joke!

> PROVE ME WRONG, please Email me a web browsing system that would actually
> work on a stock Falcon, my falcon is even 14Meg, and You can't be serious

Ok, I used this setup on my standard Falcon with 14Mb for a long time. I'm still
using it but now with an Afterburner with 48Mb fastRAM:

System:

* MiNTOS
* N.AES
* NVDI
* MiNTnet

Apps:

* CAB w. Howard Chu's CAB.OVL for MiNTnet
* Mailreader: pine
* News: tin or NEWSie
* Ftp: NcFTP, Midnight Commander or aFTP

* IRC (rarely): ircII
* and ofcourse the normal unix-clients: telnet, ftp, archie, finger...

You'll have to spend some time to get into the system though, which I get
the feeling you're not willing to do. Good luck with the PC ;-)

> about me using this hunk-o-computer history to web browse...when a cheap
> Mac or PC is far more productive for this use.

PC, yes. Mac, no. But most people here use their Ataris because they like them,
not because they doesn't know about the alternatives.

> Falcon is even a high end Atari and it can't do 16 bit color in
> 800 x 600 which is minimal for a PC and atleast possible on a 1993 Mac.

True. The Falcon isn't a particularly good computer, its bus is way too
slow. But try running Netscape under Win95 on a 1992 PC...

> Now how about IRC, forget it! there is no serious chat client for
> the falcon that is an improvement on Unix Shell chat.

AFAIK ircII is the most widely used irc-client on unix, it's available for
MiNT as well.

OK, Paul - too bad you feel that way. Go buy yourself a PC/Mac and be happy again. I use CAB and Adamas and find them great. I actually got a couple of PC:s but frankly I really enjoy working on my Falcon instead, and that includes browsing, mail, news, ftp, irc, etc

Wrong. It is a GREAT audio computer. PC/Windows/95 suffer from _horrible_ timing problems when you use MIDI and audio simultaneously. The Falcon does not. And by the way - if you payed $1000 you must have been ripped off!

I didn't realise you still had a problem, Mike. My reply was to someone who was getting disk errors from a device he knew nothing about viz. how it had been partitioned, what driver had been used previously.

Your situation is, I hope, better than this in that you may know how the disk was set up and which driver{s} have been used.

I guess your HD was partitioned by ICD s/w and that you now find G: and H; are not accessible. It's good that you know the size of these partitions - you also need to know where they start but you can probably work this out from what you have.

The likely solution is to use ICDFMT to write "Partition Info Only" to the disk. This may reset the duff info in logical sectors 0,1 which is preventing it seeing these partitions.

Go down the "Partition" path in ICDFMT. Get the partition info displayed in the table and check it for correctness. In particular check that the Size of F: is correct and that the Start sectors and Sizes of G: and H: are consistent. (Are you sure you know the Start sector numbers of these partitions?) Once you are sure these look OK just click on the button which says "Partition Info Only". This just writes the partition Info to log. sectors 0 and 1 and will not zero any FATs or wipe any data sectors. You SHOULD find that G: and H: re-appear when you next boot.

If you are unsure of the Start sectors you can use SED (or something similar) to check. You should find the ICDINC signature in the start (boot) sector of each partition.

3501. F/S, Swap, p/x ST Stuff

Newsgroup: comp.sys.atari.st
Date: 1997-12-05 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <881359547.15935.0.nnrp-01.c1ed1184@news.demon.co.uk>
Source record: 112446
Cross-posted to: comp.sys.atari.st,demon.ip.support.atariNYNYYY

I have a selection of Atari ST titles for sale.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...

SCSI SC-ROM drive, Atari CD ROMS, 16-bit sampler cartridge/hardware.

All are on original media. I may be interested in part exchange/swap W.H.Y.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Addicted to fun (nb,ni) 3
Bubble Bobble (1d,ss) & Rainbow Island 'Bubble Bobble II' (1d,ds)
Hollywood Collection (5d,ni) 4
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins and Space Harrier (20 levels)
Precious Metal (5d) 5
Arkanoid - Revenge of Doh, Captain Blood, Super Hang-On and Xenon.
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 3

Superleague Soccer (1d,ss) 3
T.V Sports Football (1d,ss,nb) 3
Vector Championship Run (1d,ss) 3
Top Shot = Kick Off + Extra Time. (1d,ds) 4

Any external modem compatible with DOS/Windows. You should be able to find a 14,400 baud external for less than $20. Even a 28,800 baud external should be less than $75, but to take advantage of it you will need HSMODEM to get your serial port to work above 19,200 baud.

Good Luck
Bud

>I've been trying to get Papyrus to print Stfax files with the supplied
>driver - no luck. I've got the latest versions of both.

It's been a while so I hope I'm not missing anything:

1) Place the STFAX.MOD into the modules folder.
2) Select menu Options/Printer...
3) In the Printer Setup Dialog, select Printer: QFax-Driver
4) In the Output Port: -- External Driver -> STFAX.MOD

That's it for the setup.

To use the STFax driver, select the QFax driver in the File/Print
menu.

Good luck,

Pat

Ollie,

Using Netscape or Explorer, you just grab the frame with the mouse -- the pointer changes to a two-headed arrow -- and drag it left, right, up or down as needed. CAB 2.0, at least, will not let you resize them. I'm hoping 2.5 will.

Hello guys!

I'm running since a few days the wonderfull Pacifist emulator on my
Pentium.
It's a very good software for games and for PageStream.

But my question is:

Is someone have printed with some software (PageStream, or Calamus or
something else)
with Pacifist??? I did not find how to print so I asker the author but
never have any answer.

Maybe it is not possible to use the printing with Pacifist ????

Please help me!

I believe the 520ST also needs a hardware modification, too, to be able to
get beyond that.

I doubt in that I'm the first in the US to the use above referenced combo, but let me be one of the first to post here...

This combination is truly excellent! As I begin my holiday shopping (yes, I'm running late, again!) I need to find the right "card" for Peter for his efforts.

Thanks, all, for the hard work. Thanks, Dan, for the latest OVL (hmm, I wonder if I need to re-register).

Thanks, Systems for Tomorrow, for the prompt service getting this out as quickly as you did.

It's been a good year!

ocr was not written expecting 8mhz

i dont remember running the mono scanner on the falcon (i probably did)

but i had it working on the TT at both speeds as well as several people's
accellerator boards

Paul Mazurek (author of Migraph OCR)

Spencer Davies wrote in message
<19310_Spencer@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk>...
Out of the ether, the following was mentioned by macdonal@cfcsc.dnd.ca...:

m> When I attempt to do this I get a series of solid and dotted lines,
m> not text!
m> Has anyone experienced this problem, and/or knows of a solution??
m> thanks for any help
I haven't experienced this problem but it sounds like the scanner part of
Migraph OCR is hardwired to the system clock speed and trying to sample the
cartridge port expecting it to be running at 8Mhz.

There was an ST compatibility package (I think it was called something like
Backward) for the Falcon. Try running this and seeing if the various options
improve things any? (especially running the system at 8Mhz).

Spencer

In article <6659vg$rh5$1@toto.cc.utah.edu>
pl4266@u.cc.utah.edu (Paul Luscher) said:-

>Atari IS NOT a capable internet computer.

Wrong. Sure the Atari platform isn't fully designed to get the most out
of the Net but you can use it. There are several prg's you can use
which are BTW for free (except CAB 2.5 >) To name just a few, Newsie,
Oasis, Popwatch, Newswatch, aFTP, FRAirc, Wensuite etc.

>I cannot do anything with a Falcon. It is too slow, to klunky...Cab amd
>stik and sting all are trash that do not work.

A while back I helped someone with a Falcon to get him on the Net and I
must say Cab works just great.

>predictably...NO PPP (Don't even start with MintNET, It's not compatible
>enough with TOS to even be an atari os)

Totally wrong here. I installed MiNT/MiNTnet on Mega 4's, on Falcons,
on TT's and on Hades and I NEVER had problem with it. I use it on my
TT and Hades every day. Until recently with the coming of the new
serial.stx (thanks Peter) MiNTnet was for the guys with a
PPP-connection the only possibility to get on the Net.

I would NOT pay money for a web
>browser on a falcon when it has never proved to work. I want to see this
>first. Even when the crappy Cab does work, it sucks

You are joking isn't it? You can't mean this. There are thousands of
happy Falcon owners around the world who make use of CAB every day
without major problems. Sure there are still some bugs but is Netscape
or that other piece of webbrowser, MIE bug free? I don't think so.

> Now how about IRC, forget it! there is no serious chat client for
>the falcon that is an improvement on Unix Shell chat.

If you were a serious Atari user, which I doubt, you should know there
are at least two chat clients.

From: outrider@anv.net
Message-ID: <667l9s$4ou$1@usenet48.supernews.com>
Source record: 112503

What's the secret to getting this to use the DSP? Whether or not I have jpegd.prg loaded, it loads jpegs at the very same speed: SLOW.

I'm using the 16-Mar-97 version of cab_jpeg.ovl (57405 bytes) and the 25-Dec-94 version of jpegd.prg (9294 bytes) that came with it.

I've tried both CAB 1.5 and 2.0 with the same results. I've tried cab_jpeg.ovl in the Modules folder and in the same folder as cab.prg (not at the same time, of course). And I know jpegd is installing fine, because Imagecopy uses it.

Hi,

In the U.K. a company called the upgrade shop can
curretnly supply atari ST users with an IDE interface
which will allow you to attach IDE Drives to your Atari.

There number over here is:

+44 1625 503448

Regards,

Ben Hills.

> to offer to anyone who wishes to purchase them for a PC or Atari.
>

There are two programs that I have used with my Tape Drive.

Firstly there is Gemar. Gemar is a shareware backup application
that is downloadable from many FTP sites and BBS'. Gemar
is very easy to use and very reliable and does not cost too much
to register.

The second option is to buy a copy of Diamond Back III. Diamond
Back is a commercial backup utility that supports Tape Drive.
The company that produces Diamond Back III is currently withdrawing
from the Atari market and selling of their exisiting stock, and
Diamond Back III is available for five dollars.

There Home Page is: www.orres.com/~orres

It may not care about what the client is, but it seems as though the FTP clients care about the TCP/IP stack. STiNG works wonderfully when doing a download but when it comes to uploads, it seems that STiNG isn't passing on the EOF marker. I've experienced this quite a lot, and the filesize doesn't need to be big for it to occur (~900 bytes). STiK, on the other hand, seems to send it without problems.

> copiers/formatters that do).

Once you've got a MSDOS formatted floppy, you can use FCOPY3 to alter the
configuration from 80x9x2 to 80x10x2, or even 82x10x2. Just set the sides,
tracks and sectors and press F6, with the MSDOS floppy in the disc drive.
Doing that will give an extra 100Kb of free space, while still being totally
compatable. You can also use the copy function to duplicate the disc, so
you don't need to use the PC to format any other disc's.

All my floppies are 100% DOS/Windows compatable, even though I have them
formatted to 829Kb (DD) or 1649Kb (HD).

One final note, FCOPY3 can't format HD discs, nor does it work under Magic
no matter what I do :(

3522. Re: Multitasking on the ST?

Newsgroup: comp.sys.atari.st
Date: 1997-12-05 00:00:00 UTC
From: dbolt@my-ste.demon.co.uk
Message-ID: <881308415.25550.2.nnrp-09.9e98f145@news.demon.co.uk>
Source record: 112510

With all the info that was given about Magic and Geneva, it was a fairly hard choice, but I finally picked Magic. It seems that I've now the fun of finding out what programs do work under Magic, and what's needed to get them to do so, and which ones don't.

It seems that the worries I had about GFA basic were largely unfounded and, even though I should have patched the compiler, it seems as though I don't need to as yet. BTW, anyone know where to find MAKE_NDX.PRG as it wasn't included with the v3.0 compiler and GFAPATCH wants it for the patched libs.

Other than that, I haven't found much that won't work at all. Most of my stuff works either single-tasking, memory limited or both (like GFA basic). The only thing I'm not happy with is Timeworks 2 doesn't work with Magic, even though it could do with the speed increase. Just have to get NVDI for that instead.

Anyway, thanks for all the suggestions, the advice helped me choose.

I would be surprise if v4.2 fixes the MagiC crashing bug... it should behave
as previous versions as nothing was done to address this problem.

Right, Piracy will drive away software developers for any platform. Why should
someone sweat it out developing for nothing (phplayer was done to show my PC
pals that there nothing special about their soundblaster card/MMX PC. So it
was for something other than money).

What I mean is someone to donate a copy.... I believe noone will, as rightly
put by you, noone can afford it especially to a stranger on the net!

I'm looking to trade for these Items for my Atari. I'm looking for
CatBoxes for Atari Jaguar, Jag-Links as well as Jag Controllers, Alien
vs Predator and even complete Jaguar Systems. If you have what I'm
looking for, check my Atari Catalogs for stuff to trade at:
http://www.teleport.com/~bensmith/bscomputers.shtml or
E-Mail bensmith@teleport.com for a trade.

Following is only a partial list of what's in my Computer HardWare &
SoftWare Catalogs. So check out my Catalogs!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got
HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers,
Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the
Monitor Power Directors to Manage & Protect your Equipment. Hardware
specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141
Monitor, Atari 1050 Disk Drives, Atari 1050 Happy Drive, Indus GT Smart

Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads,SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: Spectre GCR Macintosh Emulators, Color & MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST & Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II & Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is.
E-Mail: bensmith@teleport.com or call Ben at: (503)256-9974.
Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you test JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such as the 1090XL expansion Box. I got it from The Shadow of Shadow Software. It is the Best one of the Few that Atari made. And the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Go to: http://www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

As long as there are not more than 4 partitions any ICD partitioned
drive is fully compatible to the Atari standard. This means that in this
case you can install any AHDI compatible driver without any precaution.

> one of the devices on the chain as it should when you try the IDCHECK
> program which is more approriate for this purpouse. What happens when
> you run IDCHECK?

Note that the standalone IDCHECK program was removed from the HDDRIVER
distribution some time ago. Current versions of HDDRUTIL come with a
builtin ID check, i. e. there is a menu option for this.

TAPEBIOS and GTAR are the two programmes I used on my STE, and both are
free, produged a standard tar tape which could be read and written
under any of the UNIX systems.

You have 2 options:

Diamond Back (now at v 3.6) which is commercial. You ought to be able
to find a second hand one. This will also back-up to floppy and HD.

GEMAR (now at v3.06) by Steffen Engel. Shareware on most ftp sites.
Streamer tape only.

DB is pretty and easy to use. The developers are closing down ATM but
this should not put you off as the current version works faultlessly.

GEMAR is a little more complex (flexible) and does a much better job
of streaming i.e. keeping the tape moving by overlapping HD and tape
transfers.

They have different tape formats so its a case of either/or.

I would go for GEMAR.
